Preface	ix
List of Notations	xiii
Chapter 1. Categories and Functors	1
1.1. Categories	1
1.1.1. General results about categories	1
1.1.2. The category of sets	5
1.2. Functors	13
1.2.1. Covariant functors and contravariant functors	13
1.2.2. Functorial morphisms	14
1.2.3. Bifunctor Hom	15
1.2.4. Universal arrows and universal elements	16
1.2.5. Representable functors	18
1.2.6. Products and coproducts	19
1.2.7. Fibered products and fibered coproducts	20
1.2.8. Inductive limits and projective limits	21
1.2.9. Exact functors and adjoint functors	25
1.2.10. Projective objects and injective objects	26
1.2.11. Generators and cogenerators	28
1.3. Structures	28
1.3.1. Concrete categories	28
1.3.2. Initial structures and terminal structures	29
1.3.3. Concrete functors	30
1.3.4. Free objects, free functor	30

Chapter 2. Elementary Algebraic Structures	33
2.1. Monoids and ordered sets	34
2.1.1. Monoids and divisibility	34
2.1.2. Ordered sets	36
2.1.3. Lattice	37
2.2. Groups	40
2.2.1. Groups and subgroups	40
2.2.2. Normal subgroups	42
2.2.3. Fundamental isomorphisms	44
2.2.4. Cyclic groups and simple groups	46
2.2.5. Lattice of normal subgroups	47
2.2.6. Derived subgroup	48
2.2.7. Solvable groups and nilpotent groups	49
2.2.8. Action of a group on a set	51
2.3. Rings and algebras	52
2.3.1. Rings and modules	52
2.3.2. Ideals	54
2.3.3. Maximal ideals and prime ideals. Spectrum	58
2.3.4. Noetherian rings and Artinian rings	60
2.3.5. Division rings. Simple modules and simple Artinian rings. Radical	61
2.3.6. Nilradical. Radical ideal	66
2.3.7. Local rings	67
2.3.8. Principal ideal domains and related notions	67
2.3.9. Polynomial rings and formal power series rings	74
2.3.10. General notions relating to algebras	77
2.3.11. Matrix algebras and determinants	79
2.3.12. Graded algebras and graded modules	84
Chapter 3. Modules and Algebras	87
3.1. Additional concepts from linear algebra	89
3.1.1. Bimodules	89
3.1.2. Duality	89
3.1.3. Free modules	90
3.1.4. Exact sequences	94
3.1.5. Tensor products	96
3.1.6. Generators and relations	102
3.1.7. Modules over Noetherian rings	106

3.1.8. m -adic completion	107
3.1.9. Ring of fractions	109
3.1.10. Division rings of fractions	112
3.1.11. Polynomial rings and skew Laurent polynomials	118
3.2. Notions of commutative algebra	122
3.2.1. Localization at a prime ideal	122
3.2.2. Notions of algebraic geometry and number theory	125
3.2.3. Supp and Ass	128
3.2.4. Primary decomposition	131
3.2.5. Elements integral over a ring, <i>Nullstellensatz</i>	136
3.2.6. Krull dimension	143
3.2.7. Algebraic sets	146
3.3. Homological notions	149
3.3.1. Projective modules and injective modules	149
3.3.2. Malgrange isomorphism	155
3.3.3. Injective cogenerators	159
3.3.4. Dedekind domains	165
3.3.5. Global dimension	169
3.3.6. Bézout equations	173
3.3.7. Preabelian caregories and abelian categories	175
3.3.8. Complexes. Notions of algebraic topology	183
3.3.9. Derived functors	198
3.4. Modules over principal ideal domains and related notions	202
3.4.1. Modules over Bézout domains	202
3.4.2. Modules over principal ideal domains	205
3.4.3. Pseudo-linear transformations	213
3.4.4. Systems of linear differential equations with constant coefficients	220
3.4.5. Modules over Dedekind domains	222
Bibliography	225
Cited Authors	229
Index	235
