Preface	xi
Chapter 1. Positive Systems: Discretization with Positivity and Constraints	
Patrizio COLANERI, Marcello FARINA, Stephen KIRKLAND, Riccardo SCATTOLINI and Robert SHORTEN	
1.1. Introduction and statement of the problem	1
1.2. Discretization of switched positive systems	
via Padé transformations	4
1.2.1. Preservation of copositive Lyapunov functions	4
1.2.2. Non-negativity of the diagonal Padé approximation	7
1.2.3. An alternative approximation to the exponential matrix	9
1.3. Discretization of positive switched systems	
with sparsity constraints	10
1.3.1. Forward Euler discretization	10
1.3.2. The mixed Euler-ZOH discretization	11
1.3.3. The mixed Euler-ZOH discretization for switched systems	14
1.4. Conclusions	18
1.5. Bibliography	18
Chapter 2. Advanced Lyapunov Functions for Lur'e Systems	
Carlos A. GONZAGA, Marc JUNGERS and Jamal DAAFOUZ	
2.1. Introduction	21
2.2. Motivating example	24
2.3. A new Lyapunov Lur'e-type function for discrete-time Lur'e systems	26

2.3.1. Definition of discrete-time Lur'e systems	26
2.3.2. Introduction of a new discrete-time Lyapunov Lur'e-type function	26
2.3.3. Global stability analysis	29
2.3.4. Local stability analysis	30
2.4. Switched discrete-time Lur'e system with arbitrary switching law	37
2.4.1. Definition of the switched discrete-time Lur'e system . .	37
2.4.2. Switched discrete-time Lyapunov Lur'e-type function . .	38
2.4.3. Global stability analysis	38
2.4.4. Local stability analysis	40
2.5. Switched discrete-time Lur'e system controlled by the switching law	46
2.5.1. Global stabilization	46
2.5.2. Local stabilization	48
2.6. Conclusion	51
2.7. Bibliography	52
Chapter 3. Stability of Switched DAEs	57
Stephan TRENNE	
3.1. Introduction	57
3.1.1. Systems class: definition and motivation	57
3.1.2. Examples	59
3.2. Preliminaries	62
3.2.1. Non-switched DAEs: solutions and consistency projector	62
3.2.2. Lyapunov functions for non-switched DAEs	66
3.2.3. Classical distribution theory	67
3.2.4. Piecewise-smooth distributions and solvability of [3.1] . .	69
3.3. Stability results	71
3.3.1. Stability under arbitrary switching	72
3.3.2. Slow switching	74
3.3.3. Commutativity and stability	75
3.3.4. Lyapunov exponent and converse Lyapunov theorem . .	77
3.4. Conclusion	81
3.5. Acknowledgments	81
3.6. Bibliography	81

Chapter 4. Stabilization of Persistently Excited Linear Systems 85
Yacine CHITOUR, Guilherme MAZANTI and Mario SIGALOTTI

4.1. Introduction	86
4.2. Finite-dimensional systems	89
4.2.1. The neutrally stable case	90
4.2.2. Spectra with non-positive real part	91
4.2.3. Arbitrary rate of convergence	97
4.3. Infinite-dimensional systems	101
4.3.1. Exponential stability under persistent excitation	103
4.3.2. Weak stability under persistent excitation	105
4.3.3. Other conditions of excitation	106
4.4. Further discussion and open problems	110
4.4.1. Lyapunov-based arguments for the existing results	111
4.4.2. Generalization of theorem 4.5 to higher dimensions	111
4.4.3. Generalizations of theorem 4.8	112
4.4.4. Properties of $\rho(A, T)$	116
4.4.5. Stabilizability at an arbitrary rate for systems with several inputs	117
4.4.6. Infinite-dimensional systems	118
4.5. Bibliography	118

Chapter 5. Hybrid Coordination of Flow Networks 121
Claudio De PERSIS, Paolo FRASCA

5.1. Introduction	121
5.2. Flow network model and problem statement	123
5.2.1. Load balancing	124
5.3. Self-triggered gossiping control of flow networks	125
5.4. Practical load balancing	127
5.5. Load balancing with delayed actuation and skewed clocks	132
5.6. Asymptotical load balancing	136
5.7. Conclusions	141
5.8. Acknowledgments	141
5.9. Bibliography	141

**Chapter 6. Control of Hybrid Systems: An Overview
of Recent Advances** 145
Ricardo G. SANFELICE

6.1. Introduction	145
6.2. Preliminaries	149
6.2.1. Notation	149
6.2.2. Notion of solution for hybrid systems	150

6.3. Stabilization of hybrid systems	151
6.4. Static state feedback stabilizers	155
6.4.1. Existence of continuous static stabilizers	157
6.5. Passivity-based control	159
6.5.1. Passivity	160
6.5.2. Linking passivity to asymptotic stability	164
6.5.3. A construction of passivity-based controllers	167
6.6. Tracking control	169
6.7. Conclusions	176
6.8. Acknowledgments	176
6.9. Bibliography	177
Chapter 7. Exponential Stability for Hybrid Systems with Saturations	179
Mirko FIACCHINI, Sophie TARBOURIECH, Christophe PRIEUR	
7.1. Introduction	179
7.2. Problem statement	181
7.2.1. Saturated reset systems	182
7.3. Set theory and invariance for nonlinear systems:	
brief overview	185
7.3.1. Invariance for convex difference inclusions	186
7.4. Quadratic stability for saturated hybrid systems	190
7.4.1. Set-valued extensions of saturated functions	190
7.4.2. Continuous-time quadratic stability	192
7.4.3. Discrete-time quadratic stability	194
7.4.4. Exponential stability for saturated hybrid systems	195
7.4.5. Exponential Lyapunov functions for saturated hybrid systems	198
7.5. Computational issues	203
7.6. Numerical examples	205
7.7. Conclusions	207
7.8. Bibliography	208
Chapter 8. Reference Mirroring for Control with Impacts	213
Fulvio FORNI, Andrew R. TEEL, Luca ZACCARIAN	
8.1. Introduction	213
8.2. Hammering a surface	216
8.2.1. The reference hammer dynamics	216
8.2.2. Using dwell-time logic to avoid Zeno solutions	218
8.2.3. The controlled hammer dynamics	219
8.2.4. Instability with standard feedback tracking	220
8.2.5. Using a mirrored reference to design a hybrid stabilizer . .	221

8.3. Global tracking of a Newton’s cradle	224
8.3.1. The reference cradle	224
8.3.2. The controlled cradle	225
8.3.3. Using a mirrored reference to design a hybrid stabilizer . .	226
8.3.4. Simulations	229
8.4. Global tracking in planar triangles	230
8.4.1. The reference mass	231
8.4.2. The controlled mass	233
8.4.3. Using a family of mirrored references to design a hybrid stabilizer	233
8.4.4. Simulations	239
8.5. Global state estimation on n -dimensional convex polyhedra . .	240
8.5.1. The reference dynamics	241
8.5.2. The observer dynamics	243
8.5.3. Estimation by hybrid reformulation of the observer dynamics	244
8.5.4. Simulations	246
8.6. Proof of the main theorems	247
8.6.1. A useful Lyapunov result	247
8.6.2. Proofs of theorems 8.1–8.4	248
8.7. Conclusions	251
8.8. Acknowledgments	252
8.9. Bibliography	252
List of Authors	257
Index	261
