Preface	ix
Chapter 1. Rudiments of Human Visual System (HVS)	
Features	1
1.1. The retina	1
1.1.1. Photoreceptors: rods and cones	2
1.2. Adaptation and photo-electrical response of receptors	4
1.3. Spatial locality of vision	5
1.4. Local contrast enhancement	6
1.5. Physical vs. perceived light intensity contrast: Weber- Fechner's law	9
Chapter 2. Computational Color Constancy	
Algorithms	13
2.1. The dichromatic and Lambertian image formation models	14
2.2. Classical hypotheses for illuminant and reflectance estimation	17
2.2.1. White-patch assumption and related models	18
2.2.2. Gray-world assumption and related models	20
2.2.3. Shades of gray and multi-scale max-RGB assumptions to mix white-patch and gray-world hypotheses	22
2.2.4. Gray-edge assumption and related models	24

2.2.5. Multi-scale n -th order shades of gray-edge assumption: a general hypothesis	26
Chapter 3. Retinex-like Algorithms for Color Image Processing	29
3.1. Mathematical description of the original ratio-threshold-reset Retinex algorithm	30
3.2. Analysis of the ratio-reset Retinex formula: the limit $\varepsilon \rightarrow 0$	33
3.2.1. Retinex: “a melody that everyone plays differently”	37
3.3. From paths to pixel sprays: RSR	41
3.3.1. LRSR and SMRSR	43
3.4. A psychophysical method to measure (achromatic) induction	45
3.5. Automatic Color Equalization: ACE	50
3.6. RACE: a model with mixed features between RSR and ACE	52
3.6.1. Regularization of RACE formula: attachment to original image	54
3.7. An alternative fusion between RSR and ACE: STRESS	56
Chapter 4. Variational Formulation of Histogram Equalization	59
4.1. The Caselles–Sapiro model	59
4.2. Interpretation of Caselles–Sapiro’s functional for histogram equalization	65
4.3. Application of histogram equalization techniques to color images	67
Chapter 5. Perceptually-inspired Variational Models for Color Enhancement in the RGB Space	69
5.1. Beyond the Caselles–Sapiro model: modification of the histogram equalization functional to approach visual properties	70
5.1.1. A contrast term coherent with HVS properties	70
5.1.2. Entropic adjustment term	73

5.2. Minimization of perceptual functionals	75
5.2.1. Stability of the iterative semi-implicit gradient descent scheme	80
5.2.2. A general strategy for the reduction of computational complexity	81
5.2.3. Results	83
5.3. Embedding existing perceptually inspired color correction models in the variational framework	85
5.3.1. Alternative variational and EDP formalizations of Retinex-like algorithms	89
5.4. Variational interpretation of the Rudd-Zemach model of achromatic induction	92
5.5. Perceptual enhancement in the wavelet domain	95
5.5.1. Adjustment to the average value in the wavelet domain	98
5.5.2. Local contrast enhancement in the wavelet domain	99
5.6. High-dynamic-range (HDR) imaging	101
5.6.1. A two-stage tone mapping	105
Appendix	111
Bibliography	117
Index	125
