Preface	xi
Nomenclature	xiii
Introduction	xix
Chapter 1. The Fundamentals of Emergy	1
1.1. Concept	1
1.2. Systemic emergy representation	2
1.3. Application of the laws of emergy	3
1.3.1. Example 1: co-products-based system	4
1.3.2. Example 2: system with a distributor in a loop	6
1.3.3. Example 3: system with co-products, distributor and loop	8
1.3.4. Complete worked example	10
1.3.5. Exercise	14
1.4. Source emergy	14
1.4.1. The basic geobiosphere paradigm	15
1.4.2. Fossil resources	19
1.4.3. Minerals	23
1.4.4. EmCurrency	26
1.4.5. From fossil resources to fuel products	29
1.5. Methodology of emergy analysis	30
1.5.1. Example: production of aluminum in the United States	31
1.6. Emergy ratio	32

Chapter 2. Emergy and Converting Renewable Energy	37
2.1. Substituting natural gas for fuel wood	38
2.1.1. Analysis of a wood burning heating plant	38
2.1.2. Analysis of a natural gas heating system	42
2.1.3. Eco-limit for operation	43
2.1.4. Case study	47
2.2. Wind resources.	53
2.2.1. Emergy description	53
2.2.2. Simplified model wind turbine	55
2.2.3. Wind resource.	58
2.3. Solar panels	64
2.3.1. Thermal solar power station	64
2.3.2. Photovoltaic power station	66
2.4. The production of biodiesel and glycerol from palm oil	69
2.5. Production of biofuel from algae	72
2.5.1. Macro-algae	72
2.5.2. Micro-algae	74
2.6. Synthesis	76
Chapter 3. Emergy and Recycling	79
3.1. Introduction	79
3.1.1. Direct production: from raw material to product	80
3.2. Local approach.	81
3.2.1. Continuous recycling without material loss	81
3.2.2. Continuous recycling with material loss during recycling	86
3.2.3. Continuous recycling with material loss during transformation	87
3.2.4. Discontinuous recycling	90
3.2.5. Comparison with a global approach.	95
3.3. Recycling with losses of quality and material.	98
3.3.1. Quantification of exergy losses	99
3.3.2. Exergy losses related to recycling	99
3.3.3. Recycling with additive (with no losses during refining and transformation)	102
3.4. Ratio	110
3.4.1. Property of a ratio.	113

3.5. Exercise	114
3.5.1. Example application: steel	114
3.5.2. Example application: glass	115
3.5.3. Example application: plastic (construction applications)	116
Chapter 4. Advanced Concepts in Emergy	119
4.1. Introduction	119
4.2. Material emergy: theory review	120
4.2.1. Transformity: a temporal scale of source exergy	120
4.2.2. Assessing the UEV of ores using thermodynamic state	121
4.2.3. Example of implementation: copper production in Australia	132
4.2.4. Hubbert's peak and emergy	134
4.3. Conclusion.	136
Appendix	139
Bibliography	147
Index	153
