<b>Acknowledgments</b> . . . . .	ix
<b>Foreword</b> . . . . .	xi
<b>Introduction</b> . . . . .	xiii
<b>Chapter 1. Humans and Energy</b> . . . . .	1
1.1. History of heating . . . . .	1
1.2. Landscape of energy . . . . .	2
1.2.1. Advances in North America. . . . .	5
1.2.2. Implementation of new energy policies in Europe . . . . .	6
1.2.3. New investments in China. . . . .	7
1.2.4. In search of energy in India . . . . .	8
1.2.5. Energy for Africa . . . . .	9
1.3. Evolution of energy use in business . . . . .	11
1.4. Impact of technological development . . . . .	25
1.5. Industrial leaning . . . . .	30
1.6. Environmental constraints . . . . .	34
<b>Chapter 2. Technology for Energy</b> . . . . .	37
2.1. Technology for the energy generation . . . . .	40
2.1.1. Cogeneration and tri-generation systems . . . . .	44
2.1.2. Renewable energy technologies . . . . .	46
2.1.3. Energy storage technologies . . . . .	49
2.2. Technology for energy distribution . . . . .	50

---

2.3. Technology for improving energy use . . . . .	51
2.3.1. Energy-saving technologies . . . . .	52
2.3.2. Efficient energy use in manufacturing processes . . . . .	53
2.4. Optimization techniques for energy . . . . .	55
2.4.1. Thermodynamic rules . . . . .	58
2.4.2. Investment . . . . .	60
2.4.3. Architectural optimization. . . . .	62
2.4.4. Exergy optimization . . . . .	63
2.4.5. Optimization for industrial energy saving . . . . .	66
2.4.6. Operational optimization . . . . .	69
2.4.7. Performance optimization. . . . .	70
2.4.8. Leak optimization. . . . .	72
2.4.9. Strategic optimization . . . . .	72
2.4.10. Uncertainty handling . . . . .	75
<b>Chapter 3. Intelligence for Energy</b> . . . . .	<b>79</b>
3.1. Artificial intelligence . . . . .	80
3.1.1. Expert systems . . . . .	83
3.1.2. Case-based reasoning . . . . .	85
3.1.3. Constraint programming. . . . .	86
3.2. Machine learning . . . . .	89
3.2.1. From genetic to evolutionary algorithms . . . . .	90
3.2.2. Multi-agent systems . . . . .	91
3.2.3. Collective intelligence . . . . .	92
3.2.4. Artificial neural networks . . . . .	94
3.2.5. Bayesian networks . . . . .	100
3.2.6. Support vector machines . . . . .	101
3.2.7. Non-standard logics . . . . .	104
3.2.8. Fuzzy logic. . . . .	105
3.3. Hybrid algorithms . . . . .	107
3.3.1. Hybrid architecture for industrial problem solving . . . . .	107
3.3.2. Adaptive intelligence methods . . . . .	111
<b>Chapter 4. Greening and Innovating with Renewable Energies</b> . . . . .	<b>117</b>
4.1. Agenda 21 to COP21 . . . . .	117
4.1.1. Rio 1992 . . . . .	118
4.1.2. Kyoto 1997 . . . . .	121

4.1.3. World Assessment of Resource Management model . . . . .	121
4.1.4. PRIMES model . . . . .	122
4.1.5. Market Allocation model . . . . .	123
4.1.6. Johannesburg 2002 . . . . .	124
4.1.7. The Integrated MARKAL-EFOM System model . . . . .	126
4.1.8. An example of country use: UK MARKAL model . . . . .	128
4.1.9. Socio-MARKAL model . . . . .	129
4.1.10. Improved PRIMES model . . . . .	130
4.1.11. Rio 2012 . . . . .	131
4.1.12. Towards ecological macroeconomics . . . . .	132
4.1.13. COP21 Paris-France, 2015. . . . .	133
4.2. Training for greening . . . . .	136
4.2.1. Role of technology in training and education . . . . .	140
4.3. Innovation for greening. . . . .	141
4.3.1. Innovation for economic development . . . . .	142
4.3.2. Innovation in renewable energies . . . . .	143
4.3.3. Innovation for development of social values. . . . .	147
4.3.4. Innovations in energy governance . . . . .	148
4.3.5. Big data paradox . . . . .	149
4.3.6. Creativity for innovation . . . . .	151
<b>Chapter 5. Future of Energy . . . . .</b>	<b>153</b>
5.1. Paradox of technology and human . . . . .	153
5.2. Industrial renewal . . . . .	161
5.2.1. Technological components . . . . .	161
5.2.2. 4P factory . . . . .	171
5.3. From greening to smarting and wisening . . . . .	172
5.3.1. From knowledge city to wise city . . . . .	173
5.3.2. Smart city and green city . . . . .	174
5.4. Managing the uncertainty of dynamic demand . . . . .	182
5.4.1. Satellite images . . . . .	184
5.4.2. Zero energy . . . . .	185
5.4.3. Energy storage . . . . .	186
5.4.4. Smart grids. . . . .	187
5.4.5. Center of service . . . . .	188
5.5. From collective to individual – some trends and experiments. . . . .	190
5.5.1. New transportation . . . . .	190
5.5.2. Solar impulse . . . . .	191

5.6. New trends . . . . .	192
5.6.1. Ecosystem development . . . . .	193
5.6.2. Bankable energy storage . . . . .	194
5.6.3. New transportation . . . . .	197
<b>Conclusion</b> . . . . .	199
<b>Bibliography</b> . . . . .	203
<b>Index</b> . . . . .	233
