

Table of Contents

| | |
|--|----|
| Preface | xi |
| Chapter 1. Overview of Mechanical Transmission Problems | 1 |
| Pascal FONTAINE and Christian CUNAT | |
| 1.1. Technological aspects. | 1 |
| 1.1.1. General structures of the machines | 1 |
| 1.1.2. Mechanisms and movement. | 4 |
| 1.1.3. Engine-machine. | 6 |
| 1.1.4. Particular movements | 12 |
| 1.1.5. Friction – elements of tribology | 16 |
| 1.2. Bibliography | 28 |
| Chapter 2. Reminders of Solid Mechanics | 31 |
| Jean-François SCHMITT and Rachid RAHOUDJ | |
| 2.1. Reminders of dynamics. | 31 |
| 2.1.1. Kinematics of a rigid body | 31 |
| 2.1.2. Kinetic elements for a rigid body – Koenig’s theorems | 36 |
| 2.1.3. Newtonian dynamics. | 38 |
| 2.2. Application example: dynamic balance of a rigid rotor | 42 |
| 2.3. Analytical dynamics (Euler-Lagrange). | 46 |
| 2.4. Linear energies in the neighborhood of the balance for a non-damped discrete system | 49 |
| 2.4.1. Equilibrium configuration without group motion | 49 |
| 2.4.2. Equilibrium configuration with group motion | 50 |
| 2.5. Vibratory behavior of a discrete non-damped system around an equilibrium configuration | 51 |
| 2.6. Analytical study of the vibratory behavior of a milling machine table | 53 |
| 2.6.1. Positioning the problem | 53 |

| | |
|---|-----|
| 2.6.2. Setting up the model | 53 |
| 2.6.3. Direct resolution of the eigenvalue problem | 58 |
| 2.6.4. Cancellation of the stiff mode and reduction of the problem | 59 |
| 2.7. Bibliography | 61 |
| Chapter 3. Towards a Global Formulation of the Problem of Mechanical Drive | 63 |
| Christian CUNAT, Mohamed HABOUSSI and Jean François GANGHOFFER | |
| 3.1. Presentation of the mechanical drive modeling problem | 63 |
| 3.2. Brief review on continuum mechanics | 72 |
| 3.2.1. Conservation laws | 72 |
| 3.2.2. Principle of virtual powers (PVP) | 75 |
| 3.2.3. Thermomechanics of continuous mediums | 76 |
| 3.2.4. Notions on strain | 79 |
| 3.2.5. Some material behaviors: elementary analog models | 81 |
| 3.2.6. Variational formulations in mechanics of the structures | 82 |
| 3.3. Bibliography | 89 |
| Chapter 4. Continuous-time Linear Control | 91 |
| Frédéric KRATZ | |
| 4.1. Introduction | 91 |
| 4.2. PID controllers | 91 |
| 4.2.1. Overview | 91 |
| 4.2.2. Various structures | 94 |
| 4.2.3. Selection criteria for the adjustments | 95 |
| 4.2.4. Control mode | 97 |
| 4.3. PID controllers | 100 |
| 4.3.1. Adjustment by trial and error | 100 |
| 4.3.2. Ziegler-Nichols method | 102 |
| 4.3.3. Cohen-Coon method | 103 |
| 4.4. Methods based on previous knowledge of a system model | 104 |
| 4.4.1. Presentation of the Bode method | 104 |
| 4.4.2. Presentation of the Phillips and Harbor method | 106 |
| 4.5. Linear state feedback control systems | 107 |
| 4.5.1. Formulation of the control problem | 107 |
| 4.5.2. The structure of the control law | 107 |
| 4.5.3. Reconstruction of the state | 108 |
| 4.5.4. The controller as a combination of state feedback and an observer | 110 |
| 4.5.5. Design of feedback gain matrix F | 115 |
| 4.6. Optimal control | 117 |
| 4.6.1. Optimal regulator at continuous time | 117 |
| 4.6.2. Stochastic optimal regulator at continuous time | 121 |

| | |
|---|------------|
| 4.6.3. Discrete time optimal regulator | 122 |
| 4.6.4. Stochastic time optimal regulator | 125 |
| 4.6.5. LQG/H2 control | 125 |
| 4.7. Choice of a control | 129 |
| 4.8. Bibliography | 130 |
| Chapter 5. Overview of Various Controls | 131 |
| Frédéric KRATZ | |
| 5.1. Introduction | 131 |
| 5.2. Internal model controller | 132 |
| 5.2.1. Introduction | 132 |
| 5.2.2. Passage of the structure of regulation to that of control by internal model | 133 |
| 5.2.3. Properties of the control by internal model | 134 |
| 5.2.4. Implementation | 139 |
| 5.3. Predictive control | 141 |
| 5.3.1. Introduction | 141 |
| 5.3.2. General principles of predictive control | 144 |
| 5.4. Sliding control | 149 |
| 5.4.1. Introduction | 149 |
| 5.4.2. Structure of the control law | 149 |
| 5.4.3. Equivalent method control | 152 |
| 5.5. Bang-bang control | 152 |
| 5.6. Control-based fuzzy logic | 154 |
| 5.6.1. Introduction | 154 |
| 5.6.2. Structure of the controlled loop | 155 |
| 5.6.3. Representation of fuzzy controllers | 156 |
| 5.6.4. Basic concepts of fuzzy logic | 157 |
| 5.6.5. Fuzzification | 161 |
| 5.6.6. The inference mechanism | 162 |
| 5.6.7. Defuzzification | 163 |
| 5.7. Neural network control | 164 |
| 5.7.1. Introduction | 164 |
| 5.7.2. Formal neurons | 164 |
| 5.7.3. Neural networks | 165 |
| 5.7.4. Parsimonious approximation | 166 |
| 5.7.5. Implementation of neural networks | 166 |
| 5.8. Bibliography | 167 |
| Chapter 6. Sliding Mode Control | 169 |
| Rachid OUTBIB and Michel ZASADZINSKI | |
| 6.1. Introduction | 169 |
| 6.2. Illustrative example | 170 |

| | |
|---|------------|
| 6.3. Basic concepts | 172 |
| 6.3.1. General features of non-linear systems | 172 |
| 6.3.2. Existence of a sliding mode | 174 |
| 6.3.3. Chattering phenomena | 178 |
| 6.3.4. Determination of sliding dynamics | 180 |
| 6.3.5. Case of more than one commutation surface | 183 |
| 6.4. Direct Lyapunov method | 184 |
| 6.4.1. Affine systems with regard to control | 184 |
| 6.4.2. Linear systems | 187 |
| 6.5. Equivalent control method | 189 |
| 6.5.1. Invariance condition | 189 |
| 6.5.2. Existence conditions | 190 |
| 6.5.3. Sliding mode for a perturbed system | 194 |
| 6.5.4. Canonical forms | 196 |
| 6.6. Imposing a surface dynamic | 198 |
| 6.6.1. A classic surface dynamic | 198 |
| 6.6.2. A particular case: dynamic with pure discontinuities | 199 |
| 6.7. The choice of sliding surface | 200 |
| 6.7.1. Introduction | 200 |
| 6.7.2. A specific linear surface choice | 202 |
| 6.8. Conclusion | 203 |
| 6.9. Notations | 203 |
| 6.10. Bibliography | 204 |
| Chapter 7. Parameter Estimation for Knowledge and Diagnosis of Electrical Machines | 207 |
| Jean-Claude TRIGEASSOU, Thierry POINOT and Smaïl BACHIR | |
| 7.1. Introduction | 207 |
| 7.2. Identification using output-error algorithms | 210 |
| 7.2.1. Introduction | 210 |
| 7.2.2. Least-squares algorithm in output-error | 210 |
| 7.2.3. Principle of the output-error method in the general case | 212 |
| 7.2.4. Sensitivity functions | 214 |
| 7.2.5. Convergence of the estimator | 215 |
| 7.2.6. Variance of the estimator | 216 |
| 7.2.7. Implementation | 216 |
| 7.3. Parameter estimation with <i>a priori</i> information | 218 |
| 7.3.1. Introduction | 218 |
| 7.3.2. Bayesian approach | 219 |
| 7.3.3. Minimization of the compound criterion | 220 |
| 7.3.4. Deterministic interpretation | 222 |
| 7.3.5. Implementation | 224 |
| 7.4. Parameter estimation of the induced machine | 225 |
| 7.4.1. Introduction | 225 |

| | |
|---|------------|
| 7.4.2. Modeling in the three-phase frame. | 226 |
| 7.4.3. Park's transformation | 227 |
| 7.4.4. Continuous-time state-space model | 228 |
| 7.4.5. Output-error identification | 229 |
| 7.4.6. Output-error identification and <i>a priori</i> information | 231 |
| 7.5. Fault detection and localization based on parameter estimation | 232 |
| 7.5.1. Introduction | 232 |
| 7.5.2. Principle of the method | 234 |
| 7.5.3. Simulations | 236 |
| 7.5.4. Numerical simulations | 238 |
| 7.6. Conclusion | 241 |
| 7.7. Bibliography | 241 |
| Chapter 8. Diagnosis of Induction Machines by Parameter Estimation | 245 |
| Smaïl BACHIR, Slim TNANI, Gérard CHAMPENOIS and Jean-Claude TRIGEASSOU | |
| 8.1. Introduction. | 245 |
| 8.2. Induction motor model for fault detection. | 246 |
| 8.2.1. Stator faults modeling in the induction motor | 247 |
| 8.2.2. Rotor fault modeling | 255 |
| 8.2.3. Global stator and rotor fault model | 259 |
| 8.3. Diagnosis procedure. | 261 |
| 8.3.1. Parameter estimation | 262 |
| 8.3.2. Implementation | 265 |
| 8.4. Conclusion | 267 |
| 8.5. Bibliography | 268 |
| Chapter 9. Time-based Coordination | 271 |
| Michel DUFAUT and René HUSSON | |
| 9.1. Introduction. | 271 |
| 9.2. Brief description system | 272 |
| 9.2.1. Functional structure | 272 |
| 9.3. Some ideas on the manipulator system models. | 277 |
| 9.3.1. Various model types | 277 |
| 9.3.2. Geometric models | 278 |
| 9.3.3. Kinematic models. | 280 |
| 9.3.4. Dynamic models | 283 |
| 9.4. Coordination of motion. | 286 |
| 9.4.1. Why coordinate movements? | 286 |
| 9.4.2. Step response of a controlled shaft. | 287 |
| 9.4.3. Speed representation in a point-to-point movement. | 292 |
| 9.4.4. Partially specified trajectories | 300 |
| 9.5. Conclusion | 304 |
| 9.6. Bibliography | 304 |

| | |
|--|-----|
| Chapter 10. Multileaf Collimators | 307 |
| Sabine ELLES and Bruno MAURY | |
| 10.1. Radiotherapy | 307 |
| 10.1.1. The medical prescription. | 308 |
| 10.1.2. Linear accelerators | 308 |
| 10.2. Multileaf collimators | 310 |
| 10.2.1. Geometric characteristics of multileaf collimators. | 311 |
| 10.2.2. Technical characteristics. | 312 |
| 10.2.3. Readout systems for leaf position checking. | 313 |
| 10.2.4. Leaf command system | 314 |
| 10.2.5. Accuracy of command and leaf positioning | 316 |
| 10.3. Intensity modulated radiotherapy | 317 |
| 10.3.1. How to realize a modulated intensity beam with a multileaf collimator | 318 |
| 10.3.2. Discretization into static elementary beams. | 319 |
| 10.3.3. Discretization into dynamic beams. | 325 |
| 10.4. Conclusion | 328 |
| 10.5. Bibliography | 329 |
| | |
| Chapter 11. Position and Velocity Coordination: Control of Machine-Tool Servomotors | 331 |
| Patrick BOUCHER and Didier DUMUR | |
| 11.1. Open architecture systems | 331 |
| 11.1.1. Historical overview | 331 |
| 11.1.2. Principle and advantages. | 332 |
| 11.1.3. Modular architecture example. | 332 |
| 11.2. Structure and implementation of control laws. | 334 |
| 11.2.1. Cascaded structure | 334 |
| 11.2.2. Polynomial structure of controllers. | 336 |
| 11.2.3. Conclusion | 338 |
| 11.3. Application to machines-tools axis drive control | 339 |
| 11.3.1. Classic control scheme | 339 |
| 11.3.2. Cascaded velocity-position predictive control of synchronous motors | 339 |
| 11.3.3. Multivariable flux-position predictive control of asynchronous motors | 348 |
| 11.4. Conclusions | 362 |
| 11.5. Bibliography | 364 |
| | |
| List of Authors | 367 |
| Index | 369 |
