PREFACE	xi
PART 1. GaN AND ZnO NANOWIRE HETEROSTRUCTURES	1
CHAPTER 1. AlGaIn/GaN NANOWIRE HETEROSTRUCTURES	3
Jörg TEUBERT, Jordi ARBIOL and Martin EICKHOFF	
1.1. A model system for AlGaIn/GaN heterostructures	3
1.2. Axial AlGaIn/GaN nanowire heterostructures	4
1.2.1. Structural properties of axial AlGaIn/GaN nanowire heterostructures	5
1.2.2. Optical properties of axial AlGaIn/GaN nanowire heterostructures	8
1.2.3. Lateral internal electric fields	12
1.2.4. Axial internal electric fields	14
1.2.5. Optical characterization of single-AlGaIn/GaN nanowires containing GaN nanodisks	15
1.2.6. Electrical transport properties	18
1.3. AlGaIn/GaN core-shell nanowire heterostructures	19
1.3.1. Structural properties	20
1.3.2. Optical characteristics	23
1.3.3. Electronic properties	24
1.3.4. True one-dimensional GaN quantum wire second-order self-assembly	28
1.4. Application examples	29
1.4.1. AlGaIn/GaN nanowire heterostructure optochemical gas sensors	30
1.4.2. AlGaIn/GaN nanowire heterostructure resonant tunneling diodes	33

1.5. Conclusions.	34
1.6. Bibliography	35
CHAPTER 2. InGaN NANOWIRE HETEROSTRUCTURES	41
Bruno DAUDIN	
2.1. Introduction.	41
2.2. Self-assembled InGaN nanowires.	43
2.3. X-ray characterization of InGaN nanowires.	46
2.4. InGaN nanodisks and nanoislands in GaN nanowires	49
2.5. Selective area growth (SAG) of InGaN nanowires.	52
2.6. Conclusion	55
2.7. Bibliography	56
CHAPTER 3. ZnO-BASED NANOWIRE HETEROSTRUCTURES	61
Guy FEUILLET and Pierre FERRET	
3.1. Introduction.	61
3.2. Designing ZnO-based nanowire heterostructures	63
3.3. Growth of $Zn_xMg_{1-x}O/ZnO$ core-shell heterostructures by metal-organic vapor phase epitaxy.	66
3.4. Misfit relaxation processes in $Zn_xMg_{1-x}O/ZnO$ core-shell structures	70
3.5. Optical efficiency of core-shell oxide- based nanowire heterostructures	73
3.6. Axial nanowire heterostructures.	76
3.7. Conclusions and perspectives	80
3.8. Bibliography	81
CHAPTER 4. ZnO AND GaN NANOWIRE-BASED TYPE II HETEROSTRUCTURES	85
Yong ZHANG	
4.1. Semiconductor heterostructures	85
4.2. Type II heterostructures	87
4.3. Optimal device architecture	88
4.4. Electronic structure of type II core-shell nanowires	91
4.5. Synthesis of the type II core-shell nanowires and their signatures	94
4.6. Demonstration of type II effects in ZnO-ZnSe core-shell nanowires and photovoltaic devices	96
4.7. Summary	101
4.8. Acknowledgments	102
4.9. Bibliography	102

PART 2. INTEGRATION OF GaN AND ZnO NANOWIRES IN OPTOELECTRONIC DEVICES	105
CHAPTER 5. AXIAL GaN NANOWIRE-BASED LEDs	107
Qi WANG, Hieu N'GUYEN, Songrui ZHAO and Zetian MI	
5.1. Introduction.	107
5.2. Top-down GaN-based axial nanowire LEDs	108
5.2.1. Fabrication of top-down GaN-based axial nanowires.	108
5.2.2. Device fabrication of axial nanowire LEDs	110
5.2.3. Performance characteristics of top-down axial nanowire LEDs	111
5.3. Bottom-up GaN-based axial nanowire LEDs	112
5.3.1. Growth techniques	112
5.3.2. Doping, polarity and surface charge properties	113
5.3.3. Design and typical performance of bottom-up axial nanowire LEDs.	114
5.4. Carrier loss processes of axial nanowire LEDs.	121
5.4.1. Auger recombination.	121
5.4.2. Electron overflow.	122
5.4.3. Surface recombination	123
5.5. Controlling carrier loss of GaN-based nanowire LEDs	124
5.5.1. p-type modulation doping and AlGaN electron blocking layer	124
5.5.2. InGaN/GaN/AlGaN core-shell dot-in-a-wire phosphor-free white LEDs	126
5.6. Conclusions.	127
5.7. Bibliography	127
CHAPTER 6. RADIAL GaN NANOWIRE-BASED LEDs	135
Shunfeng LI	
6.1. Radial GaN nanowire-based LED: an emerging device.	135
6.2. Growth of GaN nanowires and radial nanowire-based devices	138
6.3. Radial GaN nanowire-based LED structure.	145
6.4. Characteristics of radial NW devices.	150
6.5. Further work and perspectives.	152
6.6. Bibliography	154
CHAPTER 7. GaN NANOWIRE-BASED LASERS.	161
Xiang ZHOU, Jordan Paul CHESIN and Silviija GRADEČAK	
7.1. Introduction to nanowire lasers	161
7.2. Theoretical considerations and simulations	163

7.3. The first experimental observations of lasing in nanowires.	165
7.4. GaN nanowire-based lasers	166
7.5. Toward wavelength tunability: nanowire lasers based on GaN/In _x Ga _{1-x} N heterostructures.	169
7.6. GaN nanowire lasers coupled with hybrid structures	171
7.7. Challenges and opportunities	173
7.8. Bibliography	175
CHAPTER 8. GaN NANOWIRE-BASED ULTRAVIOLET PHOTODETECTORS	179
Lorenzo RIGUTTI and Maria TCHERNYCHEVA	
8.1. Introduction.	179
8.2. Growth and fabrication techniques	180
8.3. GaN nanowire photoconductive detectors.	183
8.4. p-i-n junction-based GaN nanowire detectors	187
8.5. Single-wire GaN/AlN multiple quantum disk photodetectors	190
8.6. Single-wire InGaN/GaN core-shell photodetectors	193
8.7. Conclusions.	197
8.8. Acknowledgments.	197
8.9. Bibliography	198
CHAPTER 9. ZnO NANOWIRE-BASED LEDs	203
Magnus WILLANDER and Omer NOUR	
9.1. Outline.	203
9.2. Introduction.	203
9.3. Growth of ZnO nanowires	205
9.4. White light emission from ZnO nanowires	209
9.5. ZnO NW white LEDs on solid crystalline substrates	212
9.6. ZnO NWs white LEDs on flexible substrates.	214
9.7. Enhancing the emission of ZnO nanowire-based LEDs	220
9.8. Conclusion and future prospective	222
9.9. Bibliography	222
CHAPTER 10. ZnO NANOWIRE-BASED SOLAR CELLS	227
Jason B. BAXTER	
10.1. Introduction	227
10.1.1. Solar energy conversion and nanostructured solar cells	227
10.1.2. Use of ZnO in solar cells.	228
10.2. ZnO nanowire dye-sensitized solar cells	229
10.3. Quantum dot-sensitized nanowire solar cells	235

10.4. Extremely thin absorber solar cells	237
10.5. Nanowire arrays completely filled with inorganic absorbers	239
10.6. ZnO nanorod – organic hybrid solar cells	241
10.7. ZnO nanowire arrays for photoelectrochemical water splitting.	244
10.8. Conclusions	245
10.9. Acknowledgments	247
10.10. Bibliography.	247
LIST OF AUTHORS	253
