Foreword	13
Professor Michael F. GOODCHILD	
Introduction	17
Rodolphe DEVILLERS and Robert JEANSOULIN	
PART 1. Quality and Uncertainty: Introduction to the Problem	
Chapter 1. Development in the Treatment of Spatial Data Quality	21
Nicholas CHRISMAN	
1.1. Introduction	21
1.2. In the beginning	22
1.3. Changing the scene	23
1.3.1. Accuracy beyond position	23
1.3.2. Topology and logical consistency	24
1.3.3. Fitness for use	24
1.4. Elements of novelty	26
1.5. References	29
Chapter 2. Spatial Data Quality: Concepts	31
Rodolphe DEVILLERS and Robert JEANSOULIN	
2.1. Introduction	31
2.2. Sources and types of errors	34
2.3. Definitions of the concept of quality	35
2.3.1. Internal quality	37
2.3.2. External quality	39
2.4. Conclusion	41
2.5. References	41

Chapter 3. Approaches to Uncertainty in Spatial Data	43
Peter FISHER, Alexis COMBER and Richard WADSWORTH	
3.1. Introduction	43
3.2. The problem of definition	45
3.2.1. Examples of well-defined geographical objects	46
3.2.2. Examples of poorly defined geographical objects	47
3.3. Error	48
3.4. Vagueness	50
3.5. Ambiguity	51
3.5.1. Discord	52
3.5.2. Non-specificity	54
3.6. Data quality	54
3.7. Precision	55
3.8. Conclusion: uncertainty in practice	56
3.9. References	56

PART 2. Academic Case Studies: Raster, Choropleth and Land Use

Chapter 4. Quality of Raster Data	61
Serge RIAZANOFF and Richard SANTER	
4.1. Introduction	61
4.2. Geometry quality	62
4.2.1. Image reference system and modeling of the viewing geometry	63
4.2.1.1. Image reference system in matrix representation	63
4.2.1.2. Direct and inverse localization	64
4.2.1.3. Geometric transforms of images	65
4.2.1.4. Acquisition models	66
4.2.2. Definitions	68
4.2.2.1. Georeferenced image	68
4.2.2.2. Geocoded image	69
4.2.2.3. Orthorectified image	69
4.2.2.4. Check points	69
4.2.2.5. Tie points	70
4.2.2.6. Localization error	71
4.2.2.7. Mean quadratic error	71
4.2.2.8. Error vector field	71
4.2.2.9. Native projection of a map	72
4.2.3. Some geometry defects	73
4.2.3.1. Absolute localization defect	73
4.2.3.2. Global defects of internal geometry	73
4.2.3.3. Local defects of internal geometry	75
4.2.4. Localization control and global models	79
4.2.5. Internal geometry control	79

4.3. Radiometry quality	81
4.3.1. Radiometry quantities	81
4.3.2. Overview of the radiometric defects	82
4.3.2.1. Diffraction and defocalization	83
4.3.2.2. Polarization of the instrument	83
4.3.2.3. Stray light	83
4.3.2.4. Aerial photos	83
4.3.3. Calibration of the radiometric data	84
4.3.3.1. Radiometric calibration	84
4.3.3.2. Spectral calibration	85
4.3.4. Atmospheric correction	86
4.4. References	87
Chapter 5. Understanding the Nature and Magnitude of Uncertainty in Geopolitical and Interpretive Choropleth Maps	89
Kim LOWELL	
5.1. Introduction	89
5.2. Uncertainty in geopolitical maps	91
5.2.1. Locational uncertainty in geopolitical maps	91
5.2.2. Attribute uncertainty in geopolitical maps	93
5.3. Uncertainty in interpretive maps	94
5.3.1. Construction of interpretive polygonal maps	94
5.3.2. Uncertainty in boundaries of interpretive polygonal maps	96
5.3.3. Uncertainty in attributes of interpretive polygonal maps	98
5.4. Interpretive map case studies	100
5.5. Conclusion	103
5.6. References	104
Chapter 6. The Impact of Positional Accuracy on the Computation of Cost Functions	107
Alfred STEIN and Pepijn VAN OORT	
6.1. Introduction	107
6.2. Spatial data quality	108
6.2.1. Positional accuracy	109
6.2.2. The meta-model for spatial data quality	110
6.2.3. Error model	110
6.2.4. Error propagation	111
6.2.5. The variance-covariance equation	113
6.3. Application	115
6.3.1. Background	115
6.3.2. Results	118
6.4. Conclusions	120
6.5. References	121

Chapter 7. Reasoning Methods for Handling Uncertain Information in Land Cover Mapping 123

Alexis COMBER, Richard WADSWORTH and Peter FISHER

7.1. Introduction	123
7.2. Uncertainty	124
7.3. Well-defined objects: error, probability, and Bayes	125
7.4. Poorly-defined objects: spatial extent, vagueness, and fuzzy-set theory	127
7.5. Poorly defined specification: ambiguity, discord, non-specificity and expert knowledge	130
7.5.1. Ambiguity	130
7.5.2. Using expert knowledge to reason with uncertainty	130
7.5.3. Formalisms for managing ambiguity	131
7.5.3.1. Discord, experts and Dempster-Shafer theory of evidence	131
7.5.3.2. Non-specificity, experts, and qualitative reasoning formalisms	134
7.6. Conclusion	137
7.7. References	138

PART 3. Internal Quality of Vector Data: Production, Evaluation and Documentation

Chapter 8. Vector Data Quality: A Data Provider’s Perspective 141
Jenny HARDING

8.1. Introduction	141
8.2. Providing vector geographical data	142
8.2.1. Data quality and usability	142
8.2.2. Aims of a national mapping agency	142
8.2.3. Vector geographical data	143
8.3. Data quality needs of the end user	143
8.3.1. Users’ understanding of their needs	143
8.3.2. Data providers’ understanding of user needs	144
8.4. Recognizing quality elements in vector data	145
8.4.1. Lineage	145
8.4.2. Currency	146
8.4.3. Positional accuracy	147
8.4.4. Attribute accuracy	149
8.4.5. Logical consistency	149
8.4.5.1. Connectivity in vector data	149
8.4.6. Completeness	150
8.5. Quality in the capture, storage, and supply of vector data	151
8.5.1. Overview of the data capture to supply process	151
8.5.1.1. Capture specifications	152
8.5.1.2. Quality control of vector data	152
8.5.1.3. Quality assurance of vector data	152

8.5.2. Quality in data capture	153
8.5.2.1. Field capture of vector data	153
8.5.2.2. Photogrammetric capture of vector data	154
8.5.2.3. External sources for vector data	154
8.5.3. Quality in the storage and post-capture processing of vector data . .	155
8.5.4. Quality in vector data product creation and supply	155
8.6. Communication of vector data quality information to the user	156
8.7. Conclusions and future directions.	157
8.8. References	158

Chapter 9. Spatial Integrity Constraints: A Tool for Improving the Internal Quality of Spatial Data 161

Sylvain VALLIERES, Jean BRODEUR and Daniel PILON

9.1. Introduction	161
9.2. Existing work	163
9.3. Topological relations and international geomatics standards	166
9.4. Definitions and concepts: the components of integrity constraints	168
9.4.1. Spatial operators	168
9.4.1.1. The extension tangent	169
9.4.1.2. The extension borders	169
9.4.1.3. The extension strict	170
9.4.2. Cardinality associated with predicates	171
9.4.3. Buffer.	171
9.5. Documentation and use of integrity constraints	173
9.5.1. Documenting spatial integrity constraints	173
9.5.2. Validation of integrity constraints (inconsistency)	174
9.6. Production and validation of geographic data	175
9.6.1. Validating the spatial integrity of geographic data	175
9.6.2. Available tools	176
9.7. Conclusion	176
9.8. References	177

Chapter 10. Quality Components, Standards, and Metadata 179

Sylvie SERVIGNE, Nicolas LESAGE and Thérèse LIBOUREL

10.1. Introduction	179
10.2. Concepts of quality	181
10.2.1. Quality reference bases	181
10.2.2. Quality criteria.	181
10.2.2.1. Qualitative criterion	182
10.2.2.2. Quantitative criterion	182
10.2.3. Expression of the quality	183
10.2.4. Precision and accuracy	184
10.2.5. Appraisal and use of quality	185
10.2.6. Meta-quality	185

10 Fundamentals of Spatial Data Quality

10.3. Detailed description of quality criteria	186
10.3.1. Lineage	186
10.3.2. Positional accuracy or geometric accuracy	187
10.3.3. Attribute accuracy or semantic accuracy	188
10.3.4. Completeness	189
10.3.5. Logical consistency	191
10.3.6. Semantic consistency	192
10.3.7. Timeliness	194
10.3.8. Temporal consistency	194
10.3.9. Quality criteria: difficulties and limitations	196
10.4. Quality and metadata as seen by standards	197
10.4.1. Introduction to standardization	197
10.4.2. Background of geographic information standards	198
10.4.3. Standards relating to metadata and quality	201
10.4.4. Theoretical analysis of ISO/TC 211 standards	202
10.4.4.1. The ISO 19113 standard	202
10.4.4.2. The ISO 19114 standard	203
10.4.4.3. The ISO 19115 standard	204
10.4.4.4. ISO 19138 preliminary draft technical specification	205
10.4.5. Standardized implementation of metadata and quality	205
10.4.5.1. Preamble	205
10.4.5.2. The model for exchange by transmission	206
10.4.5.3. Data transfer	206
10.4.5.4. Metadata of geographic objects	207
10.5. Conclusion	207
10.6. References	208

PART 4. External Quality: Communication and Usage

Chapter 11. Spatial Data Quality Assessment and Documentation 211
Jean-François HANGOUËT

11.1. Introduction	211
11.1.1. Quality in its context	211
11.1.2. Outline of chapter	212
11.2. Denotation as a radical quality aspect of geographical data	213
11.3. Sources for the fluctuations in denotation	214
11.3.1. The modeling of the world	214
11.3.2. The modeling of operations	215
11.3.3. Realization of the model of operations	216
11.3.4. Realization of the model of the world	216
11.3.5. Synthesis	219
11.4. How to express denotation quality	220
11.4.1. General principles for the assessment of denotation quality	220
11.4.1.1. Comparison	220

11.4.1.2. Measure for measure	222
11.4.1.3. Statistics	222
11.4.1.4. Validity intervals	223
11.4.1.5. Reporting	224
11.4.2. Toward a few measures	225
11.4.3. Geometry measures	225
11.4.3.1. Punctual objects	225
11.4.3.2. Linear objects	226
11.4.3.3. Surface objects	228
11.4.3.4. Topology	228
11.4.4. Time measures	229
11.4.4.1. Dates	229
11.4.4.2. Chronology	229
11.4.5. Value measures	229
11.4.5.1. Semantics	229
11.4.5.2. Semiology	231
11.4.6. Indirect measures	232
11.4.7. Measures on modeling	232
11.5. Conclusion	233
11.6. References	233
Chapter 12. Communication and Use of Spatial Data Quality Information in GIS	237
Rodolphe DEVILLERS and Kate BEARD	
12.1. Introduction	237
12.2. Data quality information management	238
12.3. Communication of data quality information	240
12.3.1. Metadata	240
12.3.2. Data quality visualization	241
12.4. Use of quality information	244
12.4.1. Warnings and illogical operators	245
12.4.2. Quality-Aware GIS	246
12.5. Example: multidimensional user manual prototype	247
12.6. Conclusion	249
12.7. References	250
Chapter 13. External Quality Evaluation of Geographical Applications: An Ontological Approach	255
Bérengère VASSEUR, Robert JEANSOULIN, Rodolphe DEVILLERS and Andrew FRANK	
13.1. Introduction	255
13.2. Quality and ontology	256
13.2.1. Quality definition and external quality	256
13.2.2. Complexity of external quality evaluation	258

12 Fundamentals of Spatial Data Quality

13.2.3. Concept of ontology	258
13.3. Representation of external quality	259
13.3.1. Improvement of quality process	259
13.3.2. Geosemantical integration	260
13.3.3. Stages allowing external quality evaluation	261
13.3.3.1. Conceptualization and initial formalization (Stage 1)	262
13.3.3.2. Expected and internal quality matrices (Stage 2)	262
13.3.3.3. Comparison and utility: example of an application in transportation (Stage 3)	264
13.4. Discussion and conclusion	266
13.5. References	267

**Chapter 14. A Case Study in the Use of Risk Management to Assess
Decision Quality 271**

Gary J. HUNTER and Sytze DE BRUIN

14.1. Introduction	271
14.1.1. Information quality and decision-making	271
14.1.2. Chapter outline	272
14.2. Determining the required decision quality	272
14.3. Using risk management to assess decision quality	274
14.4. Dealing with risk in the decision	275
14.5. Case study: determining the volume of sand for a construction site	277
14.5.1 Case study description	277
14.5.2. Description of the data and model to be used	278
14.5.3. Results	280
14.6. Conclusions	281
14.7. References	282

Chapter 15. On the Importance of External Data Quality in Civil Law . . . 283

Marc GERVAIS

15.1. Introduction	283
15.2. Applicable general civil liability regimes	285
15.2.1. Liability regime of an act or fault of another	286
15.2.2. Liability regime of an act of a thing	291
15.3. Conclusion	297
15.4. References.	297

Appendix. Quality, and Poem Alike 301
