

Table of Contents

Preface	xxi
List of Symbols	xxv
Chapter 1. Definitions and Experimental Approach	1
1.1. Thermal transformations of solids	1
1.2. Classification of transformations	2
1.2.1. Transformation without formation of a new solid phase	3
1.2.2. Transformation with formation of a new solid phase	4
1.3. Speed and rate of reaction	6
1.3.1. Speed of reaction	6
1.3.2. Fractional extent and rate of a reaction	8
1.3.3. Volumes of the phases and coefficient of expansion of the reaction	8
1.4. Reaction zones of a transformation	10
1.4.1. Definition	10
1.4.2. Classification	10
1.4.3. Sizes of a reaction zone	11
1.5. Chemical characterizations	12
1.5.1. Analyses of the gas phases	13
1.5.2. Elementary analyses of the solids	13
1.6. Structural characterizations of the solids	13
1.7. Textural characterizations of the solids	14
1.7.1. The marker method	15
1.7.2. The cavity method	16
1.8. Characterization of the evolution of the systems	17
1.8.1. Curves of evolution: definitions	17
1.8.2. Curves of evolution: experimental obtaining	17
1.8.3. Curves of evolution: obtained laws	23

1.9. Influence of various variables on speed	26
1.9.1. Influence of temperature	26
1.9.2. Influence of partial pressures of gases	27
1.9.3. Influence of the shapes and sizes of solid particles.	27
Chapter 2. The Real Solid: Structure Elements and Quasi-Chemical Reactions	29
2.1. Structure elements of a solid	30
2.1.1. Definition of a structure element	30
2.1.2. Binary solids	31
2.1.3. Symbolic notation of structure elements	31
2.1.4. Building unit of a solid	33
2.1.5. Description and composition of a solid.	33
2.2. Structure elements of a stoichiometric binary solid	35
2.2.1. Schottky disorder.	35
2.2.2. Frenkel disorder	36
2.2.3. Antistructure disorder	36
2.2.4. S.A. disorder	36
2.3. Structure elements of a non-stoichiometric binary solid	36
2.3.1. Distance from stoichiometry and structure element	37
2.3.2. The approximation of Wagner of the prevalent defect for ionic solids	39
2.3.3. More complex binary compounds.	44
2.4. Extension to non-binary compounds.	44
2.4.1. The pseudo-binary approximation	44
2.4.2. Generalization of the approximation of the prevalent defect	45
2.5. Quasi-chemical reactions	46
2.5.1. Definition and characteristics of quasi-chemical reactions	46
2.5.2. Homogenous quasi-chemical reactions in the solid	47
2.5.3. The interphase reactions	50
2.5.4. Reactions of solid destruction	52
2.6. Introduction of foreign elements into a solid.	53
2.6.1. Concepts of impurity and doping agent	53
2.6.2. The controlled atomic imperfection in stoichiometric solids	54
2.6.3. The controlled electronic imperfection in non-stoichiometric solids	55
2.6.4. Concept of induced valence	56
Chapter 3. Thermodynamics of Heterogenous Systems	59
3.1. Introduction: aims of thermodynamics	59
3.2. General survey of thermodynamics of equilibrium	60
3.2.1. Chemical potential of a component in a phase	60

3.2.2. Variance of a system at equilibrium	64
3.2.3. Associated extensive properties of a transformation, partial molar properties	64
3.2.4. Chemical potential of an ion or a structure element	66
3.2.5. Feasibility of chemical reactions: De Donder inequality	67
3.2.6. Law of mass action for equilibriums	68
3.3. Phenomena leading to solid-gas equilibriums	69
3.3.1. Systems with variance $p - 1$	70
3.3.2. Systems with variance p	70
3.3.3. Systems with variance $p + 1$	71
3.4. Thermodynamic approach of solid-gas systems	71
3.4.1. Univariant systems	71
3.4.2. Divariant systems	72
3.4.3. Trivariant systems	74
3.5. Thermodynamics of systems containing solid phases only	76
3.5.1. Non-variant systems	76
3.5.2. Univariant systems	77
3.6. Specific study of quasi-chemical equilibriums	77
3.6.1. Equilibrium between an oxide and oxygen: the Wagner prevalent defect approximation	78
3.6.2. General equilibrium of an oxide with oxygen in the Brouwer approximation of majority defects	79
3.6.3. Doping a solid with foreign elements: quantitative aspect	82
3.7. Thermodynamics of systems: water vapor-hydrated salts	85
3.7.1. Experimental approach of equilibriums between water vapor and hydrated salts	85
3.7.2. Study of the equilibriums with variance 1	87
3.7.3. Study of hydrates with variance 2	88
3.8. Sequence of transformations, juxtaposition of stability area	93
3.9. Equilibrium of the formation of a solid from a solution	96
3.9.1. Solubility product and supersaturation	96
3.9.2. Extension to formation of a real solid	99
3.9.3. Extension to the transformation of a solid into another solid	99
3.10. Variations in the equilibrium conditions with sizes of solid phases	100
3.10.1. Variation in equilibrium constant with curvature radii	100
3.10.2. Influence of curvature radii on tension of vapor	103
3.10.3. Influence of curvature radii on point defect concentrations	104
Chapter 4. Elementary Steps in Heterogenous Reactions	105
4.1. Nature of elementary steps	107
4.1.1. The postulate of the activated jump	107
4.1.2. Voluminal speed of an elementary jump	110
4.1.3. Total voluminal speed of an elementary step	114

4.2. Elementary reactions at solid-solid interfaces	114
4.2.1. The phenomenon of epitaxy	115
4.2.2. Creation of an M interstitial cation in MG.	115
4.2.3. Creation of a G vacancy anion in MG	117
4.2.4. Consumption of a G interstitial anion of MG	119
4.2.5. Consumption of an M vacancy cation of MG	120
4.2.6. Creation of the point defects created in the initial solid	122
4.3. Elementary reactions at gas-solid interfaces	122
4.3.1. Consumption of an M interstitial cation of MG.	123
4.3.2. Consumption of a G vacancy anion of MG	124
4.3.3. Creation of a G interstitial anion in MG	126
4.3.4. Creation of an M vacancy cation in MG	128
4.4. The apparent energies of activation of interface reactions.	130
4.5. The areal speed of an interface reaction.	130
Chapter 5. Chemical Diffusion	131
5.1. Introduction: nature of diffusing particles in a solid	131
5.1.1. Origin of the diffusion in a solid	131
5.1.2. Mechanisms of diffusion in a solid	132
5.2. Flux of diffusion and velocity of diffusing particles	135
5.3. The laws of Fick.	136
5.3.1. First law of Fick	136
5.3.2. Second law of Fick.	140
5.3.3. Expression of the laws of Fick in various axes systems.	142
5.3.4. Solutions of the laws of Fick.	144
5.3.5. Self-diffusion and diffusion of the associated defect	148
5.4. Steady state obstructed diffusion.	150
5.5. Diffusion under electric field	153
5.5.1. Expression of flux	153
5.5.2. Electric conductivity and diffusion	155
5.5.3. Diffusion in a semiconductor with electronic conduction under null current and without accumulation	157
5.6. Diffusion in two mediums separated by a mobile interface	161
5.6.1. Danckwerts solution.	161
5.6.2. Example of application	165
5.6.3. Wagner pseudo-steady state approximation.	166
Chapter 6. Chemical Adsorption	169
6.1. Definitions: physical adsorption and chemical adsorption.	169
6.2. Adsorption thermodynamics and chemisorption equilibrium	170
6.2.1. Experimental results on adsorption equilibrium	170
6.2.2. The Langmuir model of chemisorption equilibrium	171

6.2.3. Dissociative adsorption and the Langmuir model	173
6.2.4. Chemisorption of gas mixtures in the Langmuir model	175
6.2.5. Adsorption isotherms that do not follow the Langmuir model	176
6.3. Kinetics of chemisorption	178
6.3.1. Velocity equation	179
6.3.2. Role of temperature on the kinetics of adsorption	180
6.4. Chemisorption and structure elements.	181
6.4.1. Ways of chemisorption modeling	182
6.4.2. The concepts used in the quasi-chemical description of adsorption	183
6.4.3. Modes of adsorption.	186
6.4.4. Modifications of the properties of adsorption of a solid.	191
Chapter 7. Mechanisms and Kinetics of a Process	195
7.1. Speeds and reactivities of reactions taking place in only a single zone	195
7.1.1. Voluminal speed in a zone	195
7.1.2. Reactivity of a transformation in a given zone	197
7.2. Transformations with several zones	201
7.2.1. Postulate of the decomposition of a reaction in elementary steps	201
7.2.2. Reaction mechanism.	201
7.2.3. Material balance in a reaction zone	203
7.2.4. Setting in the equation of mechanism – example.	205
7.3. Linear reaction mechanisms.	210
7.3.1. Definition and classification of the linear mechanisms	210
7.3.2. Multiplying coefficients of a linear mechanism	211
7.4. Linear mechanisms in pseudo-steady state modes	213
7.4.1. Definitions.	213
7.4.2. Theorem of “the equality of rates” of a linear mechanism in pseudo-steady state modes	214
7.4.3. Relations between various forms of the rates (speed) of reactions with a linear mechanism in pseudo-steady state modes	217
7.4.4. Volumes of the phases and coefficient of expansion of a reaction with a linear mechanism in pseudo-steady state modes.	219
7.4.5. Setting in equation of a linear mechanism in pseudo-steady state modes	219
7.5. Pure modes or modes with a rate-determining step	220
7.5.1. Definition	220
7.5.2. Theorem of the concentrations in pure mode	221
7.5.3. Reactivity of the rate-determining step in pure mode	225
7.5.4. Application of the method of the pure modes	226
7.5.5. Rate of the reaction in pure modes	227

7.5.6. Examples of resolutions of pure modes	228
7.5.7. Pure modes far from equilibrium	230
7.6. Mixed modes	234
7.6.1. Definition: pseudo-steady state mixed modes.	234
7.6.2. Solving a pseudo-steady state mixed mode	234
7.7. Generalization, rate of a linear mechanism in pseudo-steady state mode	241
7.8. Mixed non-pseudo-steady state modes	242
7.9. Equivalent reaction of a linear subset in local pseudo-steady state mode	245
7.9.1. Local pseudo-steady state modes	245
7.9.2. Application to the “elementary” steps	248
7.10. Reactions with separable rates	248
7.11. Influence of intensive variables on the kinetic laws.	250
7.11.1. The first kind of changes of laws	251
7.11.2. The second kind changes of laws	252
7.11.3. The third kind changes of laws.	252
7.12. Distance from equilibrium for a reaction	252
7.12.1. Distance of an elementary step from equilibrium.	253
7.12.2. Pseudo-steady state mode with a rate-determining step	254
7.13. Processes concerned in a heterogenous reaction	255
Chapter 8. Nucleation of a New Solid Phase	257
8.1. Clusters	258
8.2. Examples of nucleation diagram	258
8.3. Interfacial energy	260
8.3.1. Definition of interfacial energy	260
8.3.2. Microscopic interpretation	261
8.3.3. Effective interfacial energy.	268
8.3.4. Relation between energy and the interfacial area.	271
8.4. Formation molar Gibbs energy of clusters	272
8.4.1. Assumptions	272
8.4.2. Homogenous nucleation within a liquid phase: Volmer approach.	274
8.4.3. Homogenous nucleation within a solid phase	277
8.4.4. Heterogenous primary nucleation starting from a fluid phase	277
8.4.5. Heterogenous primary nucleation starting from a solid phase	282
8.5. Kinetics of nucleation	285
8.5.1. Reaction pathway and localization of the phenomena.	285
8.5.2. Rate and frequency of nucleation	289
8.5.3. Various considered modes	290
8.5.4. Kinetics of pseudo-steady state modes of condensation.	291

8.5.5. Kinetics of pseudo-steady state modes of condensation on potential nuclei	301
8.5.6. Intervention of diffusion in the process of nucleation	306
Chapter 9. Growth of a Solid Phase	309
9.1. Description of the zones of growth	309
9.1.1. The initial solid is a single reactant	310
9.1.2. The initial solid reacts with another phase	311
9.2. Direction of the development of phase B during the growth	311
9.2.1. The initial solid is a single reactant	312
9.2.2. The initial solid reacts with another phase	312
9.3. Modes and models for growth	312
9.3.1. Modes of the growth of a crystal of B on support A	312
9.3.2. Modeling the growth	314
9.4. Relationship between the motion velocities of the interfaces and the chemical growth rate	315
9.4.1. Inward development of formed solid	315
9.4.2. Outward development of the formed solid	317
9.5. Methodology to model growth	318
9.5.1. Modeling the space function of growth	319
9.5.2. Modeling the reactivity of growth	319
9.6. Expressions of the space functions for the growth of a grain	320
9.6.1. Space functions in isotropic growth	320
9.6.2. Space functions in radial anisotropic growth	330
9.6.3. Introduction of a dimensionless time	335
Chapter 10. Transformation by Surface Nucleation and Growth	337
10.1. Nucleation, growth, and experimental rate	338
10.2. One-process model with instantaneous nucleation and slow growth	339
10.2.1. Reaction of a single grain (or massive material)	340
10.2.2. Case of a monodispersed powder	342
10.2.3. Shapes of kinetic and rate curves	344
10.2.4. One-process model with slow nucleation and instantaneous growth	345
10.2.5. Reaction of a single grain	345
10.2.6. Reaction of a powder	346
10.3. Two-process models: nucleation and growth	347
10.3.1. General expression for the rate	347
10.3.2. Influence of the past on the transformation rate	350
10.4. Two-process model with surface nucleation-radial anisotropic growth	351
10.4.1. Reaction of a single grain	351

10.4.2. Construction of the model of evolution of a powder	352
10.4.3. Calculation of the free area (space function) for nucleation.	353
10.4.4. Calculation of the rates and the fractional extents according to time.	354
10.4.5. Dimensionless rate	357
10.4.6. Conclusion on the surface nucleation and radial anisotropic growth model	361
10.5. Two-process model with surface nucleation and isotropic growth	361
10.5.1. Qualitative approach	361
10.5.2. Quantitative approach	361
10.5.3. Modeling the evolution of a grain	365
10.5.4. Modeling the evolution of a collection of grains	366
10.5.5. Application to the spherical grains: model of Johnson-Mehl and Mampel.	367
10.6. Non-isobaric and/or non-isothermal kinetics	370
10.6.1. One-process models	371
10.6.2. Two-process models	372
10.7. Powders with granular distributions	375
10.8. Return to the first and second kind of changes of laws	376
10.8.1. First kind of changes of laws	376
10.8.2. Second kind of changes of laws	376
10.9. Conclusion	377
Chapter 11. Modeling and Experiments	379
11.1. The adequacy between the experimental conditions and modeling	379
11.2. Expressions of experimental speeds	381
11.2.1. Thermogravimetry	381
11.2.2. Microcalorimetry	382
11.2.3. Manometry	383
11.2.4. Measurement of the amounts of solids A with X-ray diffraction.	384
11.2.5. Measurement of the amounts of the formed solid B	385
11.2.6. Thickness of the layer of a planar sample of B	386
11.2.7. Relationships between experimental speeds	387
11.3. Derivation of the kinetic curves.	388
11.4. The experimental verification of the assumptions	388
11.4.1. The pseudo-steady state mode test.	388
11.4.2. The test of the separable rate or the ϕE test	391
11.5. Determination of the morphological model for growth.	395
11.5.1. Choice of the category of models: one-process or two-process model?	395
11.5.2. Determination of the model and its parameters	396

11.6. Calculations of the reactivity of growth and the specific frequency of nucleation.	398
11.7. Variations of the kinetic properties with the intensive variables . . .	399
11.7.1. Determination of the variation in the reactivity of growth starting from the morphological model	399
11.7.2. Direct determination of the variation in the reactivity of growth starting from the experiment	399
11.7.3. Comparison of the two obtained variations: new verification of the morphological model	401
11.8. Methodology of a study	402
11.8.1. Identification of the reaction	402
11.8.2. The separation of the models	402
11.8.3. Methodical approach of a study	404
Chapter 12. Granular Coalescence	407
12.1. Qualitative description of the model	408
12.2. Morphological modeling	409
12.2.1. Assumptions.	409
12.2.2. Geometry of the neck	410
12.2.3. Relation between the fractional extent and the radius x of the bridge	412
12.3. Structure of the coalescence mechanism	413
12.3.1. Transport phenomenon and groups of elementary steps	413
12.3.2. Various kinetic modes with rate-determining steps.	414
12.3.3. Definition of the reactivity of coalescence	415
12.4. Determination of the space functions	416
12.4.1. Mode with an interface reaction as the rate-determining step . .	417
12.4.2. Modes with diffusion as rate-determining step	418
12.4.3. Recapitulation of the space functions	420
12.5. Rate constants and radius of curvature.	420
12.6. Reactivity of coalescence of a solid with a single component	423
12.6.1. Case of vacancies diffusion in the solid	423
12.6.2. Case of gas diffusion.	430
12.6.3. Summary of the reactivities.	435
12.7. Extensions to the coalescence of solids with several components . .	436
12.7.1. Coalescence of anatase in the presence of water vapor	437
12.7.2. Coalescence of anatase in the presence of oxygen and hydrogen chloride with or without water vapor	441
12.7.3. Coalescence of ceria in presence of oxygen and water vapor. . .	442
12.8. Relations between experiments and modeling	443
12.8.1. Experimental measurement of coalescence	443
12.8.2. Determination of the variations of the reactivity with intensive quantities	444

12.8.3. Relation between experiment and space function in the model of tangential spheres.	445
12.9. Oswald ripening and reduction in porosity	448
Chapter 13. Decomposition Reactions of Solids	449
13.1. Classifications of decomposition reactions	450
13.1.1. Classification according to the sign of the enthalpy	450
13.1.2. Classification according to the origin of the gas molecule	450
13.2. Extent measurement with the change of the mass	451
13.2.1. Stoichiometric solids.	452
13.2.2. The produced solid is not stoichiometric	453
13.2.3. The initial solid is not stoichiometric	454
13.3. Observed experimental results	456
13.3.1. Rate-time and extent-time curves	456
13.3.2. Influences of the gas pressures.	457
13.3.3. Influence of temperature	459
13.3.4. Non-isothermal decomposition reactions.	460
13.4. Kinetics of growth in decomposition reactions of solids	462
13.4.1. Qualitative analysis of the growth.	463
13.4.2. Basic growth mechanism with gaseous diffusion.	464
13.4.3. Basic mechanism of growth with diffusions of defects	473
13.4.4. Smith-Topley's Effect	475
13.5. Nucleation in decomposition reactions of solids.	478
13.5.1. Experimental approach of nucleation	479
13.5.2. Example of the dehydration of kaolinite	481
13.5.3. Nucleation and Smith-Topley's effect	483
13.6. Total kinetic curves	484
13.7. Influence of the granular distribution	484
13.8. Normal and abnormal growth	486
Chapter 14. Reactions Between Solids	489
14.1. Classification of the reactions between solids	490
14.1.1. Simple addition reactions	490
14.1.2. Addition reactions involving decomposition	490
14.1.3. Addition reactions involving a redox reaction.	491
14.1.4. Exchange reactions or double decompositions	491
14.2. The modeling assumptions.	492
14.3. The experimental measure of the extent of the reactions	493
14.4. Reactivities of reactions between solids.	494
14.4.1. Position of the problem and experimental approach	494
14.4.2. Structures of the reaction mechanism of growth	495

14.4.3. Expression of the reactivities, reaction of titanium dioxide with barium carbonate	505
14.5. Rates of the reactions between powders	508
14.5.1. Problems of designs	508
14.5.2. Rates of a two-grain level	515
14.5.3. Rate of a granular cell	516
14.5.4. Rates on the scale of the powder	532
14.6. Conclusion	541
Chapter 15. Gas-Solid Reactions	543
15.1. Classification of gas-solid reactions	544
15.1.1. Class 1: synthesis reactions	544
15.1.2. Class 2: double-decomposition reactions	544
15.2. Pure metal gas reactions	546
15.2.1. Experimental data of oxidation of metals	546
15.2.2. Reaction zones and elementary reactions	554
15.2.3. Pure modes with interface rate determining step	566
15.2.4. Pure diffusion modes	569
15.2.5. Mixed modes	578
15.3. Growth process in the reduction of metallic oxides by hydrogen	585
15.3.1. Mechanism with diffusion of gases through the pores	586
15.3.2. Mechanisms with diffusion of defect in the formed solid phase	591
15.3.3. Conclusion about the reduction of oxides by hydrogen	593
15.3.4. Example of the reduction of a uranium oxide	594
15.4. Growth process of oxidation of metals by water vapor	596
15.4.1. General approach of mechanism	596
15.4.2. n-type formed oxide with interstitial cations	597
15.4.3. n-type formed oxide with anion vacancies	598
15.4.4. p-type formed oxide with cation vacancies	599
15.4.5. p-type formed oxide with interstitial anions	600
Chapter 16. Transformations of Solid Solutions	603
16.1. General information on transformations of solid solutions	603
16.1.1. Various types of transformations of solid solutions	603
16.1.2. Variations of concentrations in solid solution	604
16.2. Oxidation of metal alloys	606
16.2.1. Selective oxidation of single-phase binary metal alloys	607
16.2.2. Internal oxidation of single-phase binary alloys	620
16.2.3. Oxidation of single-phase binary alloys with miscibility of formed oxides	630
16.2.4. Oxidation of single-phase binary alloys with formation of two superimposed oxide layers	637

16.3. Variations of the composition of a solid solution with gas formation	640
16.3.1. Fractional extent and rate	640
16.3.2. Spatial structure of the model	642
16.3.3. Pure diffusion mode	643
16.3.4. Example: variation of stoichiometry of an oxide by reaction with hydrogen	644
16.4. Superposition of a variation of stoichiometry and decomposition	648
Chapter 17. Modeling of Mechanisms	651
17.1. Non-stoichiometry of iron oxide	651
17.1.1. Key words	651
17.1.2. Problem	651
17.1.3. Data	652
17.1.4. Solution	652
17.2. Stability of calcium carbonate	658
17.2.1. Key words	658
17.2.2. Problem	658
17.2.3. Data	659
17.2.4. Solution	659
17.3. Thermodynamics of a solid-solid reactions	665
17.3.1. Key words	665
17.3.2. Problem	665
17.3.3. Data	666
17.3.4. Solution	666
17.4. Hydrates of alumina	669
17.4.1. Key words	669
17.4.2. Problem	670
17.4.3. Data	671
17.4.4. Solution	671
17.5. Point defects in a metal sulfide	679
17.5.1. Key words	679
17.5.2. Problem	679
17.5.3. Data	680
17.5.4. Solution	681
17.6. Point defects of an alkaline bromide	689
17.6.1. Key words	689
17.6.2. Problem	689
17.6.3. Data	689
17.6.4. Solution	689
17.7. Diffusion of a metal into another metal	694
17.7.1. Key words	694
17.7.2. Problem	694

17.7.3. Data	695
17.7.4. Solution	695
17.8. Generation of atmospheres with very low pressures	701
17.8.1. Key words	701
17.8.2. Problem	701
17.8.3. Data	702
17.8.4. Solution	702
Chapter 18. Mechanisms and Kinetic Laws	709
18.1 Coalescence of anatase grains	709
18.1.1. Key words	709
18.1.2. Problem	709
18.1.3. Data	710
18.1.4. Solution	710
18.2. Reaction of a cubic sample	713
18.2.1. Key words	713
18.2.2. Problem	714
18.2.3. Data	714
18.2.4. Solution	715
18.3. Anisotropic growth	723
18.3.1. Key words	723
18.3.2. Problem	723
18.3.3. Data	724
18.3.4. Solution	724
18.4. Gas-solid reaction with one-process model	732
18.4.1. Key words	732
18.4.2. Problem	733
18.4.3. Data	733
18.4.4. Solution	734
18.5. The direction of the development of a layer	738
18.5.1. Key words	738
18.5.2. Problem	738
18.5.3. Data	739
18.5.4. Solution	740
18.6. Mampel modeling by way of the point of inflection	747
18.6.1. Key words	747
18.6.2. Problem	747
18.6.3. Data	748
18.6.4. Solution	748
18.7. Nucleation in a reaction of dehydration	753
18.7.1. Key words	753
18.7.2. Problem	753

18.7.3. Data	754
18.7.4. Solution	754
18.8. Influence of particle size in nucleation-growth approach.	759
18.8.1. Key words	759
18.8.2. Problem	760
18.8.3. Data	760
18.8.4. Solution	760
18.9. Decomposition with slow nucleation and slow anisotropic growth determined by diffusion	767
18.9.1. Key words	767
18.9.2. Problem	767
18.9.3. Data	769
18.9.4. Solution	771
19. Mechanisms and Reactivity	779
19.1. Competition oxidation – volatilization by TGA	779
19.1.1. Key words	779
19.1.2. Problem	779
19.1.3. Data	780
19.1.4. Solution	781
19.2. Controlled rate thermal analysis (CRTA)	783
19.2.1. Key words	783
19.2.2. Problem	783
19.2.3. Data	785
19.2.4. Solution	785
19.3. Sulfurization of a metal.	789
19.3.1. Key words	789
19.3.2. Problem	790
19.3.3. Data	790
19.3.4. Solution	791
19.4. Oxidation of a metal and some of its alloys.	794
19.4.1. Key words	794
19.4.2. Problem	794
19.4.3. Data	796
19.4.4. Solution	797
19.5. Reduction of octo-oxide of triuranium by dihydrogen	804
19.5.1. Key words	804
19.5.2. Problem	805
19.5.3. Data	805
19.5.4. Solution	806
19.6. Dehydration of kaolinite	813
19.6.1. Key words	813

19.6.2. Problem	813
19.6.3. Data	814
19.6.4. Solution	815
19.7. Decomposition of a carbonate of a metal	823
19.7.1. Key words	823
19.7.2. Problem	823
19.7.3. Data	824
19.7.4. Solution	824
19.8. Reaction between two solids	837
19.8.1. Key words	837
19.8.2. Problem	837
19.8.3. Data	838
19.8.4. Solution	839
Appendix 1	845
Appendix 2	847
Appendix 3	849
Appendix 4	853
Appendix 5	861
Appendix 6	867
Appendix 7	873
Appendix 8	875
Appendix 9	881
Appendix 10	899
Appendix 11	911
Bibliography	913
