Foreword	vii
Luc NEUVILLE and Géraldine MASSON	
Chapter 1. SOMO and Photoredox Asymmetric Organocatalysis	1
Maxime R. VITALE	
1.1. Introduction.	1
1.2. Asymmetric SOMO organocatalysis	2
1.2.1. The concept of SOMO organocatalysis	2
1.2.2. Enantioselective α -functionalization of carbonyl compounds	6
1.2.3. Enantioselective cascade and pseudo-cycloaddition processes	18
1.2.4. Conclusion.	23
1.3. Asymmetric photoredox organocatalysis	23
1.3.1. Photoredox catalysis	24
1.3.2. Synthetic applications of photoredox organocatalysis	27
1.4. Conclusions.	72
1.5. Bibliography	72
Chapter 2. Chiral Quaternary Ammonium Salts in Organocatalysis	87
Sylvain OUDEYER, Vincent LEVACHER and Jean-François BRIÈRE	
2.1. Introduction.	87
2.2. Phase transfer catalysis	91
2.2.1. Phase transfer catalyst: properties and mechanism	91
2.2.2. Chiral catalysts: an overview	96
2.2.3. C–C bond formation	102

2.2.4. C–O bond formation	112
2.2.5. C–N bond formation	120
2.2.6. C–Y bond formation (Y = S, X...).	125
2.2.7. New developments in PTC	130
2.3. Cooperative ion pairs organocatalysts	132
2.3.1. Mechanisms of action	134
2.3.2. Reactions based upon type 1 mechanism	136
2.3.3. Reactions based upon type 2 mechanism	149
2.4. Conclusion	152
2.5. Bibliography	153
Index	175
