

Table of Contents

Preface	ix
Chapter 1. Introduction	1
1.1. Traffic, load, Erlang, etc.	1
1.2. Notations and nomenclature	7
1.3. Lindley and Beneš	10
1.4. Notes and comments	18
PART 1: DISCRETE-TIME MODELING	21
Chapter 2. Stochastic Recursive Sequences	23
2.1. Canonical space	24
2.2. Loynes's scheme	30
2.3. Coupling	34
2.4. Comparison of stochastic recursive sequences	40
2.5. Notes and comments	43
Chapter 3. Markov Chains	45
3.1. Definition and examples	45
3.2. Strong Markov property	49
3.3. Classification of states	52
3.4. Invariant measures and invariant probability	60
3.5. Effective calculation of the invariant probability	75
3.6. Problems	77
3.7. Notes and comments	80
Chapter 4. Stationary Queues	83
4.1. Single server queues	84
4.2. Processor sharing queue	104

4.3. Parallel queues	106
4.4. The queue with S servers	117
4.5. Infinite servers queue	124
4.6. Queues with impatient customers	127
4.7. Notes and comments	146
Chapter 5. The M/GI/1 Queue	149
5.1. The number of customers in the queue	149
5.2. Pollacek-Khinchin formulas	153
5.3. Sojourn time	156
5.4. Tail distribution of the waiting time	158
5.5. Busy periods	160
PART 2: CONTINUOUS-TIME MODELING	167
Chapter 6. Poisson Process	169
6.1. Definitions	170
6.2. Properties	176
6.3. Discrete analog: the Bernoulli process	181
6.4. Simulation of the Poisson process	183
6.5. Non-homogeneous Poisson process	185
6.6. Cox processes	189
6.7. Problems	189
6.8. Notes and comments	191
Chapter 7. Markov Process	193
7.1. Preliminaries	193
7.2. Pathwise construction	195
7.3. Markovian semi-group and infinitesimal generator	199
7.4. Martingale problem	215
7.5. Reversibility and applications	220
7.6. Markov Modulated Poisson Processes	226
7.7. Problems	232
7.8. Notes and comments	234
Chapter 8. Systems with Delay	237
8.1. Little's formula	237
8.2. Single server queue	241
8.3. Multiple server queue	245
8.4. Processor sharing queue	252
8.5. The M/M/ ∞ queue	253
8.6. The departure process	254

8.7. Queuing networks	255
8.8. Problems	265
8.9. Notes and comments	268
Chapter 9. Loss Systems	271
9.1. General	271
9.2. Erlang model	274
9.3. The $M/M/1/1 + C$ queue	276
9.4. The “trunk” effect	279
9.5. Engset model	280
9.6. IPP/M/S/S queue	281
9.7. Generalized Erlang models	285
9.8. Hierarchical networks	289
9.9. A model with balking	294
9.10. A call center with impatient customers	301
9.11. Problems	303
9.12. Notes and comments	304
PART 3: SPATIAL MODELING	307
Chapter 10. Spatial Point Processes	309
10.1. Preliminary	309
10.2. Stochastic geometry	310
10.3. Poisson process	311
10.4. Stochastic analysis	326
10.5. Problems	336
10.6. Notes and comments	337
Appendix A. Mathematical Toolbox	339
A.1. Probability spaces and processes	339
A.2. Conditional expectation	347
A.3. Vector spaces and orders	352
A.4. Bounded variation processes	356
A.5. Martingales	363
A.6. Laplace transform	378
A.7. Notes and comments	379
Bibliography	381
Index	385
