

Table of Contents

Preface	15
Foreword	17
Chapter 1. Analysis of the Metrological Requirements Needed to Ensure Quality	19
Jean-Yves ARRIAT and Klaus-Dieter SCHITTHELM	
1.1. Introduction	19
1.2. Definition of the objectives	21
1.3. Choice of the method of measurement	22
1.3.1. Accounting for the selection of the method	22
1.3.2. Defining the method and the principle to implement	23
1.4. Choice of the means of measurement	24
1.4.1. Introduction	24
1.4.2. Analysis of what is already available	25
1.4.3. Assessment and acquisition of material	26
1.4.4. Technical criteria	27
1.4.4.1. Basic characteristics	27
1.4.4.2. Comportment towards influence quantities	27
1.4.4.3. Durability of the instruments used	27
1.4.4.4. Homogeneity of the supply of instruments	28
1.4.4.5. Quality of the supplier's service	28
1.4.4.6. Adaptation of the instrument	28
1.4.4.7. Possibility of traceability	29
1.4.4.8. Computerization and the speed of taking measurements	29
1.4.4.9. Ergonomics	29
1.4.4.10. Capability of measuring instruments	29

6 Metrology in Industry

1.4.5. Economic criteria	30
1.4.6. Grid of the analysis of the choice	31
1.4.6.1. Stage 1: primary technical requirements (unavoidably necessary)	31
1.4.6.2. Stage 2: secondary technical requirements (desirable)	31
1.4.7. Technical assistance for users of measuring instruments.	33
1.4.7.1. The EXERA (France)	33
1.4.7.2. VDI/VDE-GMA (Germany)	34
1.5. The traceability of the measurements	36
1.5.1. The necessity of traceability of the measurements	36
1.5.2. Calibration requirements	38
1.5.3. The selection of standards.	39
1.6. Conclusion	42

Chapter 2. Organization of Metrology: Industrial, Scientific, Legal. 43

Luc ERARD, Jean-François MAGANA, Roberto PERISSI, Patrick REPOSEUR and Jean-Michel VIRIEUX

2.1. A metrological organization: why?	43
2.2. Metrology: how?	45
2.3. Scientific and technical metrology	47
2.3.1. The BIPM	48
2.3.2. Results of the international activities	50
2.3.3. Regional organizations.	51
2.3.3.1. EUROMET	51
2.3.3.2. European Cooperation for Accreditation (EA)	54
2.3.3.3. Accreditation procedure	58
2.3.4. Organization at the national level	59
2.3.4.1. The Laboratoire National de Métrologie et d'Essais (LNE)	59
2.3.4.2. The Italian national calibration system (SNT)	63
2.3.4.3. The Swiss national calibration system	65
2.4. Legal metrology	67
2.4.1. Scope of legal metrology	67
2.4.2. The International Organization of Legal Metrology (OIML)	68
2.4.3. The European level	71
2.4.3.1. European Union harmonization	71
2.4.3.2. WELMEC	71
2.4.3.3. Other regional bodies	73
2.4.4. At national level.	73
2.4.4.1. Legal metrology in Italy	73
2.4.4.2. Legal metrology in Switzerland	74
2.4.4.3. Legal metrology in France	76

Chapter 3. Mastering Measurement Processes Approach to the Setting up of a Metrology Function	79
Marc PRIEL and Patrick REPOSEUR	
3.1. What to do at the beginning?	79
3.2. Goals and role of the measurement management system – metrological function.	80
3.3. The measurement processes	86
3.3.1. Conception and development of a new measurement process.	86
3.3.1.1. Analysis of the requirements	86
3.3.1.2. Transcription of the characteristics of the product in “measurand” form or “characteristics to be measured” form	87
3.3.1.3. The development of a measurement process can be managed as a project.	87
3.3.2. Exploitation of a valid process	88
3.3.3. Continuous improvement of measurement processes.	88
3.4. Management of the measuring equipment (metrological confirmation).	89
3.4.1. Analysis of the requirement and selection of the measuring equipments	91
3.4.1.1. Technical requirements	91
3.4.1.2. Economic and commercial conditions.	93
3.4.1.3. Assessment of the measuring equipment	93
3.4.2. Receiving the measuring equipment and putting it into service.	93
3.4.2.1. Compliance with the order	94
3.4.2.2. Identification of the measuring equipment	94
3.4.2.3. Inventory (description).	94
3.4.2.4. Technical dossier of the equipment	94
3.4.2.5. Technical documentation	94
3.4.2.6. Basic definitions	94
3.4.3. Calibration and verification operations	97
3.4.3.1. Calibration or verification program	99
3.4.3.2. Calibration or verification intervals	99
3.4.3.3. Supervision of the measuring equipment	100
3.4.4. Fitness for use of measuring equipment.	100
3.4.4.1. Freedom from bias, repeatability, stability	100
3.4.4.2. Maximum permissible errors	101
3.4.4.3. Demands for an assurance of the quality	101
3.5. Setting up a metrological structure within the firm	102
3.5.1. Analysis of the metrological requirements and setting up standards	102
3.5.2. Traceability of the measuring instrument(s) to the firm’s reference standards.	104
3.5.3. Traceability of the firm’s reference standards to the SI.	104

8 Metrology in Industry

3.6. Suggested approach for setting up a metrology function	105
3.7. Bibliography	106

Chapter 4. Handling of a Bank of Measuring Instruments 109

Jean-Yves ARRIAT

4.1. Acquaintance with the bank	110
4.1.1. Inventory	110
4.1.2. Identification	110
4.2. Metrological policy of the firm	113
4.2.1. Objective and commitment of the firm's management	113
4.2.2. Plan of actions to launch	113
4.2.3. Awareness, training and vocabulary	113
4.2.4. Selection of the material to be followed periodically	114
4.3. Drafting of the documents	115
4.3.1. Codification of the documents	115
4.3.2. Work instructions	116
4.3.3. Result-recording documents	117
4.3.4. Other documents	118
4.4. Physical handling of the measuring instruments	119
4.4.1. Receipt	119
4.4.2. Transfer	120
4.4.2.1. Traceability	120
4.4.2.2. Transfer	120
4.4.2.3. Precautions	121
4.4.3. Storing and environment	121
4.4.4. Maintenance	122
4.5. Follow-up of the measuring instruments over time	123
4.5.1. Periodicity of the follow-up	123
4.5.2. Campaign of recall	124
4.5.3. Follow-up of the results	125
4.6. Software for the handling of the means of measurements	125

Chapter 5. Traceability to National Standards 127

Luc ERARD and Patrick REPOSEUR

5.1. Introduction	127
5.2. Definitions	127
5.2.1. Traceability	127
5.2.2. Calibration	128
5.2.3. Verification	129
5.3. Traceability chains	129
5.4. Traceability	131

5.5. Calibration	132
5.5.1. Calibration in an accredited laboratory	132
5.5.2. Calibration in a non-accredited laboratory	132
5.6. Verification	133
5.6.1. Verification in an accredited laboratory and in its accreditation scope	133
5.6.2. Verification in a non-accredited laboratory or out of the accreditation scope.	133
5.7. Use of calibration and verification results	133
5.7.1. Use of the results of a calibration	134
5.7.2. Use of the results of a verification	134
5.8. Particular cases.	135
5.8.1. “Self-calibrating” or “self-gauging” measuring instruments.	135
5.8.2. Complex instruments in which components/equipments and software are narrowly combined and large measurement ranges are covered for complex quantities.	136
5.9. Metrology in chemistry and physical methods of chemical analysis	136
5.9.1. Traceability in metrology in chemistry.	137
5.9.2. Influence of the principle of the method	139
5.9.2.1. Absolute methods.	139
5.9.2.2. Relative method.	140
5.9.2.3. Comparative method	140
5.9.3. “Documentary” traceability.	141
5.9.4. Control of the reference materials	143
5.9.5. Conclusion.	145
5.10. Assessment of traceability	145
5.11. Bibliography	146
Chapter 6. Calibration Intervals and Methods for Monitoring the Measurement Processes	149
Patrizia TAVELLA and Marc PRIEL	
6.1. Normative requirements	149
6.2. Methods for monitoring the instruments in use – general criteria	150
6.2.1. First method: metrological redundancies	150
6.2.2. Second method: checking the coherence of the results	151
6.2.3. Third method: “monitoring standards” and statistical supervision of the measurement processes	152
6.2.3.1. Statistical control of the measurement processes	152
6.2.3.2. Control charts	154
6.2.3.3. Use of the monitoring methods.	157
6.3. The determination of the calibration intervals	158
6.4. Bibliography	161

7.8. Reporting of the measurement result	189
7.9. Example	190
7.10. Bibliography	193
Chapter 8. The Environment of Measuring	195
Jean-Yves ARRIAT and Marc PRIEL	
8.1. The premises	196
8.1.1. Ambient temperature	197
8.1.2. Relative humidity	198
8.1.3. Handling of the air conditioning systems	199
8.1.4. Power network	199
8.1.5. Radioelectric disturbances	199
8.1.6. Measurements on-site	200
8.2. The personnel	200
8.2.1. The connection of metrology function	200
8.2.2. Staff involved in the metrology function	201
8.2.3. The qualification of the personnel	202
8.3. The documentation	202
8.3.1. Filing of the documents	202
8.3.1.1. Documents dealing with the quality system	202
8.3.1.2. Records regarding quality	203
8.3.2. Management of the documents	204
8.4. Bibliography	205
8.5. Appendix	206
Chapter 9. About Measuring	209
Claude KOCH	
9.1. Preliminary information	209
9.1.1. Physical quantity	209
9.1.2. The object to be measured	210
9.1.3. Field of measurement	210
9.1.4. Four types of uses of measuring instruments	211
9.1.5. Influencing quantities	212
9.2. Choice of a measuring principle	213
9.2.1. Differential measurement	214
9.2.2. Direct measurement	214
9.2.3. Indirect measurement	214

12 Metrology in Industry

9.3. Practicing in metrology	215
9.3.1. Implementing the instruments	216
9.3.2. Precautions before measuring.	216
9.3.3. Measurements	216
9.3.4. Variations and their sign.	217
9.3.5. The time factor	218
9.4. Expression of the results	218
9.4.1. Graphs	220
9.4.2. Histograms.	220
9.5. What qualities does a metrologist require?	221
9.5.1. Be inquisitive	222
9.5.2. Be tidy and methodical	222
9.5.3. Be open to doubt	222
9.5.4. Be observant.	222
9.5.5. Be honest.	223

**Chapter 10. Organization of Metrology at Solvay Research
and Technology.**

225

José MONTES

10.1. Presentation of the company	225
10.2. Organization of the metrology sector	226
10.2.1. Creation.	226
10.2.2. Missions	226
10.2.3. Organization	226
10.2.4. Geographic localization of the activities	227
10.2.5. Composition of the bank of measuring equipment.	227
10.3. Metrology	228
10.3.1. Identification.	228
10.3.2. Connection of the standards	228
10.3.3. Periodicity of the calibrations	229
10.3.4. Calibration operations	229
10.3.5. Documentation of the calibration results	230
10.3.6. Verdict of the metrological confirmation	231
10.3.7. Indication of the state of the calibrations	231
10.3.8. Personnel and subcontracting	232

Chapter 7. Measurements and Uncertainties	163
Marc PRIEL	
7.1. Introduction.	163
7.2. Measurement of physical quantity	164
7.3. Analysis of the measurement process	166
7.3.1. The cause and effect diagram method.	166
7.3.2. Using the list published in the GUM (section 3.3.2)	167
7.3.3. Errors	168
7.3.4. Cutting down the errors	169
7.3.4.1. Cutting down random errors by repeating measurements	170
7.3.4.2. Cutting down systematic errors by applying corrections.	171
7.4. Modeling of the measurement process	172
7.4.1. Measurement procedure and model of the measurement process.	172
7.4.2. An essential stage for the assessment of uncertainty: modeling the measurement	173
7.5. Assessment of the uncertainty of the input quantities	174
7.5.1. Type A methods.	175
7.5.2. Type B methods.	176
7.5.3. Comparing the Type A and Type B methods	179
7.6. Calculating the combined uncertainty on the result	180
7.6.1. Situation when all the input quantities are independent	180
7.6.1.1. Situation when the input quantities are independent and the model is a sum.	180
7.6.1.2. Situation when the model is a product	181
7.6.2. Situation when the input quantities are dependent	181
7.6.2.1. Assessment of the covariances by assessing a coefficient of correlation $r(x_i, x_j)$	181
7.6.2.2. Assessment of the covariances by calculating the terms of covariance	181
7.6.2.3. Assessment of the covariances by considering the terms common to two input quantities	181
7.7. Use of the performances of the method (repeatability and freedom of bias) to assess the uncertainty of the measurement result	183
7.7.1. Intra- or interlaboratory approaches	184
7.7.2. Intra-laboratory approach	185
7.7.3. Interlaboratory approach.	186
7.7.4. Data processing for intra- and interlaboratory approaches.	187
7.7.4.1. Assessment of the repeatability and the reproducibility	187
7.7.4.2. Assessment of the freedom of bias (trueness)	188
7.7.4.3. Evaluation of the linearity.	189
7.7.4.4. The terms $\sum_i c_i u^2(x_i)$	189

Chapter 11. Metrology within the Scope of the ISO 9001 Standard	233
Philippe LANNEAU and Patrick REPOSEUR	
11.1. Introduction	233
11.2. Introduction to the evolution of the standard	234
11.2.1. The concept of continuous improvement	234
11.2.2. The process approach.	235
11.3. Measurement control process	236
11.4. The ISO 9001 (2000) standard step-by-step	238
11.5. Conclusion	245
Chapter 12. Training for the Metrology Professions in France	247
Bernard LARQUIER	
12.1. The metrology function in a firm's strategy	247
12.2. Metrology profession	248
12.2.1. Metrological engineer	249
12.2.2. Metrological technician	249
12.2.3. Metrological operator.	250
12.3. Initial training.	250
12.3.1. Schools for engineers.	250
12.3.2. Courses for higher level technicians	251
12.3.3. Vocational high schools	251
12.4. Continuing education	251
12.5. Long-lasting training courses	253
12.6. The teaching of metrology in secondary schools	265
12.7. Prospects for the development of long-lasting training courses	265
12.8. Bibliography	266
The Authors	267
Index	269
