<b>Preface</b> . . . . .	xi
<b>Chapter 1. Evolutionary Algorithms</b> . . . . .	1
1.1. From natural evolution to engineering . . . . .	1
1.2. A generic evolutionary algorithm . . . . .	3
1.3. Selection operators . . . . .	5
1.3.1. Selection pressure . . . . .	5
1.3.2. Genetic drift . . . . .	7
1.3.3. Proportional selection . . . . .	9
1.3.4. Tournament selection . . . . .	16
1.3.5. Truncation selection . . . . .	18
1.3.6. Environmental selection . . . . .	18
1.3.7. Selection operators: conclusion . . . . .	20
1.4. Variation operators and representation . . . . .	21
1.4.1. Generalities about the variation operators . . . . .	21
1.4.2. Crossover . . . . .	22
1.4.3. Mutation . . . . .	25
1.5. Binary representation . . . . .	25
1.5.1. Crossover . . . . .	26
1.5.2. Mutation . . . . .	28
1.6. The simple genetic algorithm . . . . .	30
1.7. Conclusion . . . . .	31

---

<b>Chapter 2. Continuous Optimization</b> . . . . .	33
2.1. Introduction . . . . .	33
2.2. Real representation and variation operators for evolutionary algorithms . . . . .	35
2.2.1. Crossover . . . . .	36
2.2.2. Mutation . . . . .	40
2.3. Covariance Matrix Adaptation Evolution Strategy . . . . .	46
2.3.1. Method presentation . . . . .	46
2.3.2. The CMA-ES algorithm . . . . .	52
2.4. A restart CMA Evolution Strategy . . . . .	55
2.5. Differential Evolution (DE) . . . . .	57
2.5.1. Initializing the population . . . . .	58
2.5.2. The mutation operator . . . . .	58
2.5.3. The crossover operator . . . . .	60
2.5.4. The selection operator . . . . .	64
2.6. Success-History based Adaptive Differential Evolution (SHADE) . . . . .	65
2.6.1. The algorithm . . . . .	65
2.6.2. Current-to- $p$ best/1 mutation . . . . .	67
2.6.3. The success history . . . . .	68
2.7. Particle Swarm Optimization . . . . .	70
2.7.1. Standard Particle Swarm Algorithm 2007 . . . . .	72
2.7.2. The parameters . . . . .	75
2.7.3. Neighborhoods . . . . .	75
2.7.4. Swarm initialization . . . . .	76
2.8. Experiments and performance comparisons . . . . .	77
2.8.1. Experiments . . . . .	77
2.8.2. Results . . . . .	81
2.8.3. Discussion . . . . .	85
2.9. Conclusion . . . . .	88
2.10. Appendix: set of basic objective functions used for the experiments . . . . .	89

---

<b>Chapter 3. Constrained Continuous Evolutionary Optimization</b> . . . . .	93
3.1. Introduction . . . . .	93
3.1.1. The problem with Constrained Evolutionary Optimization . . . . .	93
3.1.2. Taxonomy . . . . .	95
3.2. Penalization . . . . .	98
3.2.1. Static penalties . . . . .	101
3.2.2. Dynamic penalties . . . . .	103
3.2.3. Adaptive penalties . . . . .	104
3.2.4. Self-adaptive penalties . . . . .	108
3.2.5. Stochastic ranking . . . . .	111
3.3. Superiority of feasible solutions . . . . .	112
3.3.1. Special penalization . . . . .	113
3.3.2. Feasibility rules . . . . .	114
3.4. Evolving on the feasible region . . . . .	117
3.4.1. Searching for feasible solutions . . . . .	117
3.4.2. Maintaining feasibility using special operators . . . . .	120
3.5. Multi-objective methods . . . . .	123
3.5.1. Bi-objective techniques . . . . .	124
3.5.2. Multi-objective techniques . . . . .	128
3.6. Parallel population approaches . . . . .	130
3.7. Hybrid methods . . . . .	132
3.8. Conclusion . . . . .	132
<b>Chapter 4. Combinatorial Optimization</b> . . . . .	135
4.1. Introduction . . . . .	135
4.1.1. Solution encoding . . . . .	136
4.1.2. The knapsack problem (KP) . . . . .	137
4.1.3. The Traveling Salesman Problem (TSP) . . . . .	139
4.2. The binary representation and variation operators . . . . .	140
4.2.1. Binary representation for the 0/1-KP . . . . .	142
4.2.2. Binary representation for the TSP . . . . .	142
4.3. Order-based Representation and variation operators . . . . .	143
4.3.1. Crossover operators . . . . .	143
4.3.2. Mutation operators . . . . .	155
4.3.3. Specific operators . . . . .	158
4.3.4. Discussion . . . . .	159
4.4. Conclusion . . . . .	163

---

<b>Chapter 5. Multi-objective Optimization</b> . . . . .	165
5.1. Introduction . . . . .	165
5.2. Problem formalization . . . . .	166
5.2.1. Pareto dominance . . . . .	166
5.2.2. Pareto optimum . . . . .	167
5.2.3. Multi-objective optimization algorithms . . . . .	167
5.3. The quality indicators . . . . .	167
5.3.1. The measure of the hypervolume or “ $\mathcal{S}$ -metric” . . . . .	168
5.4. Multi-objective evolutionary algorithms . . . . .	169
5.5. Methods using a “Pareto ranking” . . . . .	169
5.5.1. NSGA-II . . . . .	171
5.6. Many-objective problems . . . . .	176
5.6.1. The relaxed dominance approaches . . . . .	177
5.6.2. Aggregation-based approaches . . . . .	177
5.6.3. Indicator-based approaches . . . . .	180
5.6.4. Diversity-based approaches . . . . .	180
5.6.5. Reference set approaches . . . . .	180
5.6.6. Preference-based approaches . . . . .	181
5.7. Conclusion . . . . .	181
<b>Chapter 6. Genetic Programming for Machine Learning</b> . . . . .	183
6.1. Introduction . . . . .	183
6.2. Syntax tree representation . . . . .	186
6.2.1. Closure and sufficiency . . . . .	187
6.2.2. Bloat control . . . . .	187
6.3. Evolving the syntax trees . . . . .	187
6.3.1. Initializing the population . . . . .	188
6.3.2. Crossover . . . . .	188
6.3.3. Mutations . . . . .	191
6.3.4. Advanced tree-based GP . . . . .	193
6.4. GP in action: an introductory example . . . . .	194
6.4.1. The symbolic regression . . . . .	195
6.4.2. First example . . . . .	196
6.5. Alternative Genetic Programming Representations . . . . .	200
6.5.1. Linear-based GP Representation . . . . .	201

6.5.2. Graph-based Genetic Programming	
Representation . . . . .	206
6.6. Example of application: intrusion detection in a computer system . . . . .	210
6.6.1. Learning data . . . . .	211
6.6.2. GP design . . . . .	212
6.6.3. Results . . . . .	214
6.7. Conclusion . . . . .	215
<b>Bibliography</b> . . . . .	217
<b>Index</b> . . . . .	233
