

## Table of Contents

<b>PART 1. GENERAL PHYSICS PHENOMENA</b> . . . . .	1
<b>Chapter 1. Physics of Dielectrics</b> . . . . .	3
Guy BLAISE and Daniel TREHEUX	
1.1. Definitions . . . . .	3
1.2. Different types of polarization. . . . .	4
1.2.1. Non-polar solids . . . . .	5
1.2.2. Polar solids. . . . .	5
1.2.3. Electronic polarization. . . . .	5
1.2.4. Ionic polarization . . . . .	7
1.2.5. Orientation polarization . . . . .	7
1.2.6. Interfacial or space-charge polarization. . . . .	8
1.2.7. Comments . . . . .	8
1.3. Macroscopic aspects of the polarization . . . . .	8
1.3.1. Polarization of solids with metallic bonding . . . . .	8
1.3.2. Polarization of iono-covalent solids . . . . .	9
1.3.3. Notion of polarization charges . . . . .	11
1.3.4. Average field in a neutral medium. . . . .	11
1.3.5. Medium containing excess charges . . . . .	13
1.3.6. Local field . . . . .	14
1.3.7. Frequency response of a dielectric . . . . .	15
1.4. Bibliography . . . . .	16
<b>Chapter 2. Physics of Charged Dielectrics: Mobility and Charge Trapping.</b> . . . . .	17
Guy BLAISE and Daniel TREHEUX	
2.1. Introduction. . . . .	17

2.2. Localization of a charge in an “ideally perfect” and pure polarizable medium . . . . .	18
2.2.1. Consideration of the polarization. . . . .	18
2.2.2. Coupling of a charge with a polarizable medium: electrostatic approach . . . . .	20
2.2.3. Coupling of a charge with a polarizable medium: quantum approach . . . . .	22
2.2.4. Conduction mechanisms. . . . .	25
2.3. Localization and trapping of carriers in a real material . . . . .	26
2.3.1. Localization and trapping of the small polaron . . . . .	26
2.3.2. Localization and intrinsic trapping of the carriers . . . . .	27
2.3.3. Trapping on structure defects and impurities. . . . .	28
2.3.4. Localization related to disorder. . . . .	30
2.3.5. Mechanical energy related to the trapping of one charge . . . . .	33
2.4. Detrapping . . . . .	33
2.4.1. Thermal detrapping. . . . .	33
2.4.2. Detrapping under an electric field by the Poole-Frankel effect . . . . .	33
2.5. Bibliography . . . . .	35
<b>Chapter 3. Conduction Mechanisms and Numerical Modeling of Transport in Organic Insulators: Trends and Perspectives . . . . .</b>	<b>37</b>
Fulbert BAUDOIN, Christian LAURENT, Séverine LE ROY and Gilbert TEYSSERE	
3.1. Introduction. . . . .	37
3.2. Molecular modeling applied to polymers . . . . .	40
3.2.1. Energy diagram: from the n-alkanes to polyethylene . . . . .	41
3.2.2. Results of modeling . . . . .	45
3.3. Macroscopic models . . . . .	51
3.3.1. Elementary processes . . . . .	53
3.3.2. Some models characterizing the experimental behavior . . . . .	58
3.4. Trends and perspectives . . . . .	63
3.4.1. Unification of atomistic and macroscopic approaches . . . . .	63
3.4.2. Interface behavior. . . . .	65
3.4.3. Physical models for transport in volume . . . . .	66
3.4.4. Degradation induced by a charge and/or a field . . . . .	67
3.4.5. Contribution of the physics of non-insulating organic materials . . . . .	68
3.5. Conclusions. . . . .	68
3.6. Bibliography . . . . .	69
<b>Chapter 4. Dielectric Relaxation in Polymeric Materials. . . . .</b>	<b>79</b>
Eric DANTRAS, Jérôme MENEGOTTO, Philippe DEMONT and Colette LACABANNE	
4.1. Introduction. . . . .	79

4.2. Dynamics of polarization mechanisms . . . . .	79
4.2.1. Electronic and ionic polarization . . . . .	80
4.2.2. Dipolar polarization . . . . .	80
4.2.3. Maxwell–Wagner–Sillars polarization . . . . .	81
4.2.4. Interfacial polarization . . . . .	81
4.3. Orientation polarization in the time domain . . . . .	81
4.3.1. Single relaxation time model . . . . .	82
4.3.2. Discrete distribution of relaxation times . . . . .	82
4.3.3. Continuous distribution of relaxation times . . . . .	83
4.3.4. Stretched exponential: Kohlrausch–Williams–Watts equation . . . . .	83
4.4. Orientation polarization in the frequency domain . . . . .	83
4.4.1. Single relaxation time model: the Debye equation . . . . .	83
4.4.2. Discrete distribution of relaxation times . . . . .	84
4.4.3. Continuous distribution of relaxation times . . . . .	85
4.4.4. Parametric analytical expressions . . . . .	85
4.4.5. Kramers–Kronig relations . . . . .	87
4.5. Temperature dependence . . . . .	87
4.5.1. Shift factor . . . . .	87
4.5.2. Crystalline or vitreous phases: Arrhenius equation . . . . .	88
4.5.3. Vitreous phases in the transition zone: the Hoffman–Williams– Passaglia equation . . . . .	90
4.5.4. Liquid phases: Vogel–Fulcher–Tammann equation (VFT) . . . . .	90
4.6. Relaxation modes of amorphous polymers . . . . .	92
4.6.1. Primary relaxation mode . . . . .	92
4.6.2. Secondary relaxation modes . . . . .	94
4.7. Relaxation modes of semi-crystalline polymers . . . . .	96
4.7.1. Complex relaxation in an homogeneous medium . . . . .	97
4.7.2. Discrete spectrum of elementary relaxations in a heterogenous medium . . . . .	97
4.7.3. Universality of the behavior laws in semi-crystalline polymers . . . . .	98
4.8. Conclusion . . . . .	98
4.9. Bibliography . . . . .	99
<b>Chapter 5. Electrification . . . . .</b>	<b>101</b>
G�rard TOUCHARD	
5.1. Introduction . . . . .	101
5.2. Electrification of solid bodies by separation/contact . . . . .	101
5.2.1. The process . . . . .	102
5.2.2. Charge transfer mechanism by the separation contact of two different conductors . . . . .	103
5.2.3. Polymer–metal contact . . . . .	106
5.2.4. Contact between two polymers . . . . .	107

5.2.5. Triboelectric series . . . . .	107
5.3. Electrification of solid particles . . . . .	108
5.3.1. Theoretical work by Masuda <i>et al.</i> . . . . .	109
5.3.2. Experimental work by Touchard <i>et al.</i> . . . . .	110
5.4. Conclusion . . . . .	115
5.5. Bibliography . . . . .	115
<b>PART 2. PHENOMENA ASSOCIATED WITH ENVIRONMENTAL STRESS – AGEING.</b> . . . . .	117
<b>Chapter 6. Space Charges: Definition, History, Measurement</b> . . . . .	119
Alain TOUREILLE, Petru NOTINGHER, Jérôme CASTELLON and Serge AGNEL	
6.1. Introduction. . . . .	119
6.2. History. . . . .	120
6.3. Space charge measurement methods in solid insulators. . . . .	123
6.3.1. Destructive methods . . . . .	124
6.3.2. Non-destructive methods . . . . .	125
6.4. Trends and perspectives . . . . .	129
6.5. Bibliography . . . . .	130
<b>Chapter 7. Dielectric Materials under Electron Irradiation in a Scanning Electron Microscope</b> . . . . .	135
Omar JBARA, Slim FAKHFAKH, Sébastien RONDOT and Dominique MOUZE	
7.1. Introduction. . . . .	135
7.2. Fundamental aspects of electron irradiation of solids . . . . .	136
7.2.1. Volume of interaction and penetration depth. . . . .	136
7.2.2. The different emissions . . . . .	137
7.3. Physics of insulators . . . . .	141
7.3.1. General points . . . . .	141
7.3.2. Insulators under electron irradiation . . . . .	141
7.4. Applications: measurement of the trapped charge or the surface potential. . . . .	153
7.4.1. Introduction . . . . .	153
7.4.2. Static methods. . . . .	154
7.4.3. Dynamical methods . . . . .	156
7.5. Conclusion . . . . .	159
7.6. Bibliography . . . . .	160

<b>Chapter 8. Precursory Phenomena and Dielectric Breakdown of Solids</b> . . . . .	165
Christian MAYOUX, Nadine LAHOUD, Laurent BOUDOU and Juan MARTINEZ-VEGA	
8.1. Introduction. . . . .	165
8.2. Electrical breakdown . . . . .	166
8.3. Precursory phenomena . . . . .	168
8.3.1. Definition . . . . .	168
8.3.2. Potential precursors. . . . .	169
8.3.3. Induced precursors . . . . .	173
8.3.4. Observed precursors . . . . .	176
8.4. Conclusion . . . . .	179
8.5. Bibliography . . . . .	180
<b>Chapter 9. Models for Ageing of Electrical Insulation: Trends and Perspectives</b> . . . . .	189
Nadine LAHOUD, Laurent BOUDOU, Christian MAYOUX and Juan MARTINEZ-VEGA	
9.1. Introduction. . . . .	189
9.2. Kinetic approach according to Zhurkov . . . . .	190
9.2.1. Presentation . . . . .	190
9.2.2. Interpretation of the process and introduction to the notion of a dilaton. . . . .	192
9.3. Thermodynamic approach according to Crine . . . . .	195
9.4. Microscopic approach according to Dissado–Mazzanti–Montanari. . . . .	200
9.4.1. Thermal ageing . . . . .	201
9.4.2. Ageing under electrical field: space charges effect . . . . .	202
9.5. Conclusions and perspectives . . . . .	206
9.6. Bibliography . . . . .	207
<b>PART 3. CHARACTERIZATION METHODS AND MEASUREMENT</b> . . . . .	209
<b>Chapter 10. Response of an Insulating Material to an Electric Charge: Measurement and Modeling</b> . . . . .	211
Philippe MOLINIÉ	
10.1. Introduction . . . . .	211
10.2. Standard experiments . . . . .	212
10.3. Basic electrostatic equations . . . . .	213
10.3.1. General equations . . . . .	213
10.3.2. Current measurement at a fixed potential: case (a) . . . . .	214
10.3.3. Voltage measurement at a fixed charge: case (b) . . . . .	214
10.4. Dipolar polarization . . . . .	215
10.4.1. Examples . . . . .	217

10.5. Intrinsic conduction . . . . .	218
10.5.1. Example: charged insulator irradiated by a high-energy electron beam . . . . .	219
10.6. Space charge, injection and charge transport . . . . .	220
10.6.1. Electrostatic models . . . . .	220
10.6.2. Models combining electrostatics and thermodynamics: the influence of trapping and dispersive transport . . . . .	221
10.6.3. Purely thermodynamic models: current controlled by detrapping . . . . .	223
10.6.4. Interface-limited charge injection . . . . .	225
10.7. Which model for which material? . . . . .	226
10.8. Bibliography . . . . .	227

**Chapter 11. Pulsed Electroacoustic Method: Evolution and Development  
Perspectives for Space Charge Measurement . . . . . 229**

Virginie GRISERI

11.1. Introduction . . . . .	229
11.2. Principle of the method . . . . .	230
11.2.1. General context . . . . .	230
11.2.2. PEA device . . . . .	230
11.2.3. Measurement description . . . . .	232
11.2.4. Signal processing . . . . .	234
11.2.5. Example of measurement . . . . .	236
11.3. Performance of the method . . . . .	238
11.3.1. Resolution in the thickness . . . . .	238
11.3.2. Lateral resolution . . . . .	239
11.3.3. Acquisition frequency . . . . .	239
11.3.4. Signal/noise ratio . . . . .	239
11.4. Diverse measurement systems . . . . .	239
11.4.1. Measurements under high voltage . . . . .	239
11.4.2. High and low temperature measurements . . . . .	240
11.4.3. Measurements under lighting . . . . .	241
11.4.4. 3D detection system . . . . .	241
11.4.5. PEA system with high repetition speed . . . . .	243
11.4.6. Portable system . . . . .	244
11.4.7. Measurements under irradiation . . . . .	244
11.4.8. Contactless system . . . . .	246
11.5. Development perspectives and conclusions . . . . .	246
11.6. Bibliography . . . . .	246

<b>Chapter 12. FLIMM and FLAMM Methods: Localization of 3-D Space Charges at the Micrometer Scale.</b>	251
Anca PETRE, Didier MARTY-DESSUS, Laurent BERQUEZ and Jean-Luc FRANCESCHI	
12.1. Introduction	251
12.2. The FLIMM method	252
12.2.1. Principle	252
12.2.2. Characteristic FLIMM equation	253
12.3. The FLAMM method	254
12.4. Modeling of the thermal gradient	255
12.5. Mathematical deconvolution	255
12.5.1. Virtual Space Charge Model	256
12.5.2. The scale transformation method	256
12.5.3. The regularization method	257
12.6. Results	258
12.6.1. 1-D study of PEN (Polyethylene Naphtalate) subjected to high fields	258
12.6.2. 2-D charge distribution	261
12.6.3. 3-D charge distributions	264
12.7. Conclusion	267
12.8. Bibliography	267
<b>Chapter 13. Space Charge Measurement by the Laser-Induced Pressure Pulse Technique</b>	271
David MALEC	
13.1. Introduction	271
13.2. History	272
13.3. Establishment of fundamental equations for the determination of space charge distribution	272
13.3.1. Specific case: uncharged or charged and short-circuited sample ( $V=0$ )	273
13.3.2. General case: charged sample submitted to an electrical potential difference	274
13.3.3. Application of a pressure wave	275
13.3.4. Relationships between measured signals and charge distribution	275
13.4. Experimental setup	276
13.4.1. Synoptic schema of the measurement setup	276
13.4.2. Generation of pressure	277
13.4.3. Signal recording	279
13.4.4. Calibration of the experimental setup	279
13.4.5. Signal processing	281

13.5. Performances and limitations . . . . .	282
13.5.1. Performances. . . . .	282
13.5.2. Limitations . . . . .	283
13.6. Examples of use of the method . . . . .	283
13.7. Use of the LIPP method for surface charge measurement. . . . .	285
13.8. Perspectives. . . . .	285
13.9. Bibliography . . . . .	285
<b>Chapter 14. The Thermal Step Method for Space Charge Measurements</b> . . . . .	<b>289</b>
Alain TOUREILLE, Serge AGNEL, Petru NOTINGHER and Jérôme CASTELLON	
14.1. Introduction . . . . .	289
14.2. Principle of the thermal step method (TSM). . . . .	290
14.2.1. The TSM in short circuit conditions . . . . .	290
14.2.2. Evolution of the TSM for measurements under a continuous applied electric field . . . . .	293
14.2.3. Calibration: use of measurements under low applied field for the determination of material parameters . . . . .	296
14.3. Numerical resolution methods . . . . .	297
14.4. Experimental set-up . . . . .	299
14.4.1. Plate-type samples . . . . .	300
14.4.2. Power cables . . . . .	302
14.5. Applications. . . . .	306
14.5.1. Materials . . . . .	306
14.5.2. Components . . . . .	312
14.6. Conclusion . . . . .	321
14.7. Bibliography . . . . .	322
<b>Chapter 15. Physico-Chemical Characterization Techniques of Dielectrics</b> . . . . .	<b>325</b>
Christine MAYOUX and Christian MAYOUX	
15.1. Introduction . . . . .	325
15.2. Domains of application . . . . .	326
15.2.1. Transformers and power capacitors . . . . .	326
15.2.2. Energy transport cables and dry capacitors . . . . .	328
15.3. The materials themselves . . . . .	333
15.3.1. Infrared spectrophotometry . . . . .	333
15.3.2. Calorimetric analysis . . . . .	336
15.3.3. Thermostimulated currents . . . . .	338
15.4. Conclusion . . . . .	340
15.5. Bibliography . . . . .	341

<b>Chapter 16. Insulating Oils for Transformers</b> . . . . .	347
Abderrahmane BEROUAL, Christophe PERRIER, Jean-Luc BESSEDE	
16.1. Introduction . . . . .	347
16.2. Generalities . . . . .	348
16.3. Mineral oils . . . . .	352
16.3.1. Composition . . . . .	352
16.3.2. Implementation . . . . .	354
16.3.3. Characteristics . . . . .	354
16.4. Synthetic esters or pentaerythritol ester . . . . .	357
16.4.1. Composition and implementation . . . . .	357
16.4.2. Characteristics . . . . .	357
16.4.3. Application . . . . .	363
16.5. Silicone oils or PDMS . . . . .	363
16.5.1. Composition and implementation . . . . .	363
16.5.2. Characteristics . . . . .	364
16.6. Halogenated hydrocarbons or PCB . . . . .	366
16.6.1. Composition and implementation . . . . .	366
16.6.2. Characteristics . . . . .	367
16.6.3. Retro-filling . . . . .	367
16.7. Natural esters or vegetable oils . . . . .	367
16.7.1. Composition and implementation . . . . .	367
16.7.2. Characteristics . . . . .	368
16.7.3. Use . . . . .	370
16.8. Security of employment of insulating oils . . . . .	370
16.8.1. Characteristics related to fire . . . . .	370
16.8.2. Toxicology and ecotoxicology . . . . .	372
16.9. Conclusion and perspectives . . . . .	373
16.10. Bibliography . . . . .	374
<b>Chapter 17. Electrorheological Fluids</b> . . . . .	379
Jean-Numa FOULC	
17.1. Introduction . . . . .	379
17.1.1. Electrokinetic effects . . . . .	379
17.1.2. Electroviscous effects . . . . .	380
17.1.3. Electrorheological effects . . . . .	380
17.2. Electrorheology . . . . .	381
17.2.1. Electrorheological effect . . . . .	381
17.2.2. Characterization of electrorheological fluids . . . . .	382
17.2.3. Composition of electrorheological fluids . . . . .	385
17.2.4. Applications of electrorheological fluids . . . . .	387
17.3. Mechanisms and modeling of the electrorheological effect . . . . .	387
17.3.1. Forces exerted on and between the particles . . . . .	388

17.3.2. Mechanisms of the electrorheological effect . . . . .	388
17.4. The conduction model. . . . .	392
17.4.1. The bases of the conduction model. . . . .	393
17.4.2. Attraction force between half-spheres . . . . .	394
17.5. Giant electrorheological effect. . . . .	396
17.6. Conclusion . . . . .	397
17.7. Bibliography . . . . .	397
<b>Chapter 18. Electrolytic Capacitors . . . . .</b>	<b>403</b>
Pascal VENET	
18.1. Introduction . . . . .	403
18.2. Generalities . . . . .	404
18.2.1. Characteristic parameters . . . . .	404
18.2.2. Conclusions on the different families of capacitors . . . . .	409
18.3. Electrolytic capacitors. . . . .	410
18.4. Aluminum liquid electrolytic capacitors . . . . .	411
18.4.1. Principles and composition . . . . .	411
18.4.2. Assembly and connections. . . . .	412
18.5. (Solid electrolyte) tantalum electrolytic capacitors . . . . .	414
18.5.1. Principle, composition and glimpse of the manufacture . . . . .	414
18.5.2. Assembly and connections. . . . .	416
18.6. Models and characteristics . . . . .	417
18.6.1. Representative electrical diagram . . . . .	417
18.6.2. Loss factors, loss angles . . . . .	419
18.6.3. Variation as a function of the voltage . . . . .	422
18.6.4. Variation as a function of the ambient temperature . . . . .	423
18.7. Failures of electrolytic capacitors . . . . .	426
18.7.1. Modes and failure rates of components . . . . .	426
18.7.2. Influence of temperature . . . . .	427
18.7.3. Failures of liquid electrolyte aluminum electrolytic capacitors . . . . .	428
18.7.4. Failures of solid electrolyte tantalum capacitors . . . . .	430
18.8. Conclusion and perspectives . . . . .	431
18.9. Bibliography . . . . .	432
<b>Chapter 19. Ion Exchange Membranes for Low Temperature Fuel Cells . . . . .</b>	<b>435</b>
Vicente COMPAÑ MORENO and Evaristo RIANDE GARCIA	
19.1. Introduction . . . . .	435
19.2. Homogenous cation-exchange membranes . . . . .	438
19.3. Heterogenous ion exchange membranes . . . . .	439
19.4. Polymer/acid membranes . . . . .	441
19.4.1. Membranes prepared from polyme blends . . . . .	442

19.5. Characterization of membranes . . . . .	442
19.5.1. Nernst–Planck flux equation . . . . .	443
19.5.2. Osmotic phenomena and electric potential . . . . .	445
19.5.3. Ionic diffusion in ion exchange membranes . . . . .	447
19.5.4. Electromotive force of concentration cells and transport number . . . . .	448
19.5.5. Conductivity . . . . .	450
19.5.6. Electro-osmosis . . . . .	452
19.5.7. Thermodynamics of irreversible processes and transport numbers . . . . .	453
19.6. Experimental characterization of ion exchange membranes . . . . .	457
19.6.1. Water sorption . . . . .	457
19.6.2. Determination of the ion exchange capacity . . . . .	458
19.6.3. Measurements of transport number and mobility of protons in membranes . . . . .	459
19.6.4. Measurement of conductivity . . . . .	461
19.6.5. Electro-osmotic measurements . . . . .	466
19.6.6. Measurements of the permeability of reformers in membranes: methanol permeability in vapour phase . . . . .	467
19.7. Determination of membrane morphology using the SEM technique . . . . .	469
19.8. Thermal stability . . . . .	470
19.9. Acknowledgements . . . . .	471
19.10. Bibliography . . . . .	472
<b>Chapter 20. Semiconducting Organic Materials for Electroluminescent Devices and Photovoltaic Conversion . . . . .</b>	<b>477</b>
Pascale JOLINAT and Isabelle SEGUY	
20.1. Brief history . . . . .	477
20.2. Origin of conduction in organic semiconductors . . . . .	479
20.3. Electrical and optical characteristics of organic semiconductors . . . . .	480
20.4. Application to electroluminescent devices . . . . .	482
20.4.1. General structure of an organic electroluminescent diode (OLED) . . . . .	482
20.4.2. Electroluminescence efficiency . . . . .	483
20.4.3. Advancement of the technology . . . . .	485
20.5. Application to photovoltaic conversion . . . . .	486
20.5.1. General structure of an organic photovoltaic cell . . . . .	486
20.5.2. Functioning of an organic photovoltaic cell . . . . .	486
20.5.3. Advancement of the technology . . . . .	488
20.6. The processing of organic semiconductors . . . . .	489
20.6.1. Deposition of polymer solutions . . . . .	489

20.6.2. Vapor phase deposition of low molar mass materials . . . . .	490
20.6.3. Laser thermal transfer of organic materials . . . . .	490
20.7. Conclusion . . . . .	491
20.8. Bibliography . . . . .	491
<b>Chapter 21. Dielectric Coatings for the Thermal Control of Geostationary Satellites: Trends and Problems . . . . .</b>	<b>495</b>
Stéphanie REMAURY	
21.1. Introduction . . . . .	495
21.2. Space environment. . . . .	496
21.2.1. Orbits . . . . .	496
21.2.2. Free space . . . . .	496
21.2.3. Microgravity . . . . .	497
21.2.4. Thermal environment. . . . .	497
21.2.5. Atomic oxygen . . . . .	498
21.2.6. Electromagnetic radiation . . . . .	498
21.2.7. Charged particles . . . . .	498
21.2.8. Meteoroids and cosmic debris. . . . .	500
21.3. The thermal control of space vehicles . . . . .	501
21.3.1. The definition of thermal control . . . . .	501
21.3.2. Usual technologies for thermal control . . . . .	501
21.3.3. Coatings for thermal control. . . . .	501
21.3.4. Multilayer insulations (MLI) . . . . .	502
21.3.5. Radiator coatings . . . . .	502
21.4. Electrostatic phenomena in materials. . . . .	503
21.4.1. Electrical conductivity . . . . .	503
21.4.2. Electrostatic discharges in the geostationary environment . . . . .	508
21.5. Conclusion . . . . .	512
21.6. Bibliography . . . . .	513
<b>Chapter 22. Recycling of Plastic Materials . . . . .</b>	<b>515</b>
Pilar MARTINEZ and Eva VERDEJO	
22.1. Introduction . . . . .	515
22.2. Plastic materials . . . . .	516
22.2.1. Introduction to plastic materials . . . . .	516
22.2.2. Consumption of plastic materials. . . . .	517
22.2.3. Plastics in electrical engineering . . . . .	518
22.3. Plastic residues . . . . .	519
22.3.1. Generation and recovery of plastic residues . . . . .	519
22.3.2. Processings at the end of life . . . . .	521
22.3.3. Potential and limitations of recycling . . . . .	527
22.4. Bibliography . . . . .	529

<b>Chapter 23. Piezoelectric Polymers and their Applications</b> . . . . .	531
Alain BERNES	
23.1. Introduction . . . . .	531
23.2. Piezoelectric polymeric materials . . . . .	532
23.2.1. Poly(vinylidene fluoride)(PVDF). . . . .	532
23.2.2. The copolymers P(VDF-TrFE) . . . . .	535
23.2.3. The odd-numbered polyamides . . . . .	535
23.2.4. Copolymers constituted of vinylidene cyanide monomer . . . . .	537
23.3. Electro-active properties of piezoelectric polymers . . . . .	538
23.3.1. Ferroelectricity. . . . .	538
23.3.2. Semi-crystalline polymers: Fluorinated polymers and odd polyamides . . . . .	541
23.3.3. Amorphous Poly(vinylidene cyanide) copolymers . . . . .	541
23.3.4. Influence of chemical composition and physical structure on the electro-active properties of polymers . . . . .	543
23.3.5. Protocols of polarization . . . . .	544
23.3.6. Piezoelectricity . . . . .	545
23.3.7. Reduction of the number of independent coefficients – Matrix notation . . . . .	546
23.3.8. Piezoelectric constitutive equations . . . . .	547
23.3.9. Comparison of piezoelectric properties . . . . .	548
23.4. Piezoelectricity applications . . . . .	549
23.4.1. Transmitting transducers. . . . .	549
23.4.2. Piezoelectric sensors . . . . .	551
23.5. Transducers . . . . .	551
23.5.1. Principle . . . . .	551
23.5.2. Electroacoustic transducers . . . . .	552
23.5.3. Characteristics of ultrasonic transducers . . . . .	552
23.5.4. Hydrophones. . . . .	553
23.5.5. Probes for Non-Destructive Testing (NDT). . . . .	555
23.5.6. Biomedical transducer applications . . . . .	555
23.6. Conclusion . . . . .	556
23.7. Bibliography . . . . .	556
<b>Chapter 24. Polymeric Insulators in the Electrical Engineering Industry: Examples of Applications, Constraints and Perspectives.</b> . . . . .	559
Jean-Luc BESSEDE	
24.1. Introduction . . . . .	559
24.2. Equipment. . . . .	560
24.2.1. Arc commutation . . . . .	560
24.2.2. Composite insulators . . . . .	563
24.3. Power transformer insulation. . . . .	565

24.4. Perspectives . . . . .	567
24.5. Conclusion . . . . .	570
24.6. Bibliography . . . . .	570
<b>List of Authors</b> . . . . .	<b>573</b>
<b>Index</b> . . . . .	<b>577</b>
