

Table of Contents

Foreword	xv
Michel PAILLARD	
Preface	xvii
Bernard MULTON	
Chapter 1. Marine Environment and Energy Resources	1
Raymond NERZIC and Jean-Pierre MAZÉ	
1.1. Introduction	1
1.2. Physical and potential resources	2
1.2.1. Definitions and orders of magnitude on the subject of marine energy	2
1.2.2. Energetic potential and conversion	4
1.2.3. Wind energy	5
1.2.4. Tidal energy	7
1.2.5. Tidal stream energy	8
1.2.6. Swell energy	10
1.2.7. Ocean thermal energy conversion	11
1.3. Physical aspects of the marine environment	12
1.3.1. Water depth	12
1.3.2. Nature of sea beds	14
1.3.3. Meteo-oceanic conditions	16
1.3.4. Distance from the coast	16
1.4. Environmental data	17
1.4.1. Environmental factors to take into account	18
1.4.2. Special areas	19
1.5. Bibliography	22

Chapter 2. Constraints of the Marine Environment	23
Marc PREVOSTO, Peter DAVIES, Chantal COMPÈRE and Michel OLAGNON	
2.1. Extreme conditions at sea	23
2.1.1. Some notes about uncertainties.	24
2.1.2. From response extremes to their generating conditions	24
2.1.3. From commonplace conditions to exceptional events	25
2.1.4. Some characteristics of maritime meteorological extremes	29
2.2. Materials in the marine environment	31
2.2.1. Choice of materials	31
2.2.2. Durability	35
2.2.3. Anti-fouling protection	37
2.3. Bibliography	40
Chapter 3. Some Concepts of Hydrodynamics and Ocean Engineering	43
Aurélien BABARIT, Hakim MOUSLIM and Jean-Marc ROUSSET	
3.1. The marine environment	43
3.1.1. Ocean waves	43
3.1.2. Currents and wind	47
3.2. Loads on marine structures.	48
3.2.1. Hydrostatic force	49
3.2.2. Excitation forces on waves	50
3.2.3. Radiation forces.	51
3.2.4. Drift forces in waves	53
3.2.5. Viscous drag forces.	53
3.3. Numerical and experimental tools for analysis	55
3.3.1. Numerical methods.	55
3.3.2. Experimental methods	59
3.4. Conclusion	65
3.5. Bibliography	65
Chapter 4. Marine Energy and Industrial Actors	67
Guy BESLIN and Jacques RUER	
4.1. Why does marine energy concern large industrial players?	67
4.1.1. The marine environment is complex and sometimes hostile.	68
4.1.2. Means of intervention at sea	68
4.2. An energy source of immense potential	69
4.3. Marine energy: a sector reserved for industrial players and large-scale international investors	71
4.4. Example of offshore wind energy: the main players and industry in France	72

4.5. Industrial assembly	73
4.5.1. Players involved in the project	73
4.5.2. The most effective allotment of the work.	74
4.6. Industrial risks and how to manage them	75
4.6.1. Development phase.	75
4.6.2. Technological risks during construction	80
4.6.3. Risks during the operation phase.	81
4.6.4. Risks linked to deconstruction	83
4.7. Hazard management for interventions at sea	84
4.8. Design and maintenance of electricity-producing installations at sea	85
4.9. Policies and organization of maintenance	88
4.10. Operational and maintenance activities.	90
4.10.1. Operation	90
4.10.2. Maintenance	90
4.11. Estimating maintenance costs	92
4.12. Decision-making by the investors	93
4.13. Conclusion	97
4.14. Bibliography	98
Chapter 5. Installation of Wind Turbines at Sea	101
Jacques RUER	
5.1. Peculiarities of the marine environment	101
5.1.1. Influence of the waves	101
5.1.2. Scouring	103
5.2. Design of the support structures of offshore wind turbines.	104
5.2.1. Criteria dictating the size	104
5.2.2. Main types of support structures for offshore wind turbines.	106
5.3. Assembly of offshore wind turbines	111
5.4. Electrical cables	115
5.5. Access to offshore wind turbines	115
5.6. Floating wind turbines	117
5.6.1. General facts about floating wind turbines	117
5.6.2. Column float.	119
5.6.3. Semi-submersible float	119
5.6.4. Tension leg platform	119
5.6.5. Upwind or downwind turbines	120
Chapter 6. Conversion Systems for Offshore Wind Turbines.	123
Cristian NICHITA and Brayima DAKYO	
6.1. Evolution of wind energy technology	123
6.1.1. Brief history	123

6.1.2. Architecture of a modern wind turbine	127
6.1.3. Recent realizations and developments.	134
6.1.4. Technological trends	137
6.2. Estimating the wind energy resource	140
6.2.1. Nature of the wind	140
6.2.2. Knowledge of onshore potential	143
6.2.3. Offshore wind energy potential.	148
6.3. Wind turbines	151
6.3.1. Statistical characteristic curves	151
6.3.2. Estimating the power developed by a wind turbine	155
6.3.3. Generator and power electronic systems	158
6.3.4. Multi-megawatt offshore wind farms	162
6.4 Bibliography	168
Chapter 7. Production of Tidal Range Energy	173
Vincent DE LALEU	
7.1. Tidal range energy – theory and potential	173
7.1.1. Theory	173
7.2. Potential of tidal range energy development	177
7.2.1. Global potential	177
7.2.2. Existing tidal power plants and projects	179
7.3. Tidal range energy in France: the Rance Tidal Power Plant	180
7.3.1. Brief history of tidal range energy in France.	180
7.3.2. The construction of the Rance Tidal Power Plant	183
7.3.3. The bulb groups at the Rance Tidal Power Plant	185
7.3.4. Operational cycles at the Rance Tidal Power Plant	187
7.3.5. Cathodic protection.	189
7.3.6. Technical expertise gained from experience	190
7.3.7. The environmental effects experienced	191
7.4. Tidal range energy in Canada – Annapolis	192
7.4.1. Brief history of tidal range energy in Canada (Bay of Fundy).	192
7.4.2. Annapolis Royal Generating Station	194
7.5. Tidal range energy in the United Kingdom – the Severn	197
7.5.1. Brief history of tidal range energy in the UK	197
7.5.2. Studies on tidal range energy projects in the Severn estuary	199
7.5.3. Studies of innovative solutions for the Severn estuary	203
7.5.4. Research on tidal range energy projects in the Mersey estuary	206
7.6. Tidal range energy in South Korea – Sihwa.	208
7.6.1. Brief history of tidal range energy in South Korea	208
7.6.2. The Sihwa tidal range energy scheme	209
7.7. The challenges of tidal range energy	211
7.7.1. Costs	211

7.7.2. Environmental impact	213
7.8. Bibliography	214
CHAPTER 8. CONCEPTS, MODELING AND CONTROL OF TIDAL TURBINES . .	219
Mohamed BENBOUZID, Jacques André ASTOLFI, Seddik BACHA, Jean Frédéric CHARPENTIER, Mohamed MACHMOUM, Thierry MAITRE and Daniel ROYE	
8.1. Introduction.	219
8.2. State of the art technology in tidal turbines	220
8.2.1. Basic concepts and topologies	220
8.2.2. Turbines founded on the principle of lift	224
8.2.3. Other concepts	227
8.2.4. Ducts	230
8.2.5. Energy potential and choice of site	232
8.3. Modeling and control of tidal turbines	236
8.3.1. Modeling	236
8.3.2. Controlling elements of a tidal turbine	259
8.4. Bibliography	275
CHAPTER 9. PAIMPOL-BRÉHAT: DEVELOPMENT OF THE FIRST TIDAL ARRAY IN FRANCE	279
Pierre BRUN, Laurent TERME and Agnès BARILLIER	
9.1. Introduction and context	279
9.1.1. Selection of the site.	280
9.1.2. Local choice	282
9.1.3. Choice of site for coming onshore and the cable's route	283
9.1.4. Reconnaissance	286
9.2. Selection of technologies.	287
9.2.1. Methodological approach for the turbines	287
9.2.2. Comparative view of the technologies	290
9.2.3. Conclusion.	294
9.2.4. Choice of the topology of linkage	295
9.2.5. Choice of the connection strategy	297
9.2.6. Technological developments	298
9.3. Technical specifications of the project and the producible power	299
9.3.1. Farm of turbines.	299
9.3.2. Calculations of the producible power	300
9.3.3. Environmental monitoring	303
9.4. Administrative procedures	305
9.4.1. Context and applicable procedures.	305
9.4.2. Feedback	309
9.5. Conclusion and perspectives.	309
9.6. Bibliography	310

CHAPTER 10. FEEDBACK FROM THE SABELLA TIDAL CURRENT TURBINE PROJECT	311
Jacques RUER	
10.1. Introduction	311
10.2. Design of the Sabella turbines	311
10.2.1. First design	312
10.2.2. Second design	312
10.2.3. Third design	314
10.3. The demonstration project Sabella D03	316
10.3.1. Presentation of the project	316
10.3.2. Results of the measurements	317
10.3.3. Observations	319
10.4. Conclusions	321
10.5. Bibliography	321
CHAPTER 11. WAVE ENERGY CONVERTERS	323
Judicaël AUBRY, Hamid Ben AHMED, Bernard MULTON, Aurélien BABARIT and Alain CLÉMENT	
11.1. Presentation of the wave energy resource	324
11.1.1. Taking the spectral nature of the swell into account.	326
11.1.2. Chart of the occurrence of sea states	327
11.1.3. Geographic distribution	328
11.2. Classification of wave energy converters	329
11.2.1. Overtopping systems: type A	333
11.2.2. Oscillating water column systems: type B	336
11.2.3. Oscillating body systems: type C	341
11.2.4. Hydrodynamic performance of wave energy converters: capture width and capture width ratio	347
11.3. Direct wave energy converters with direct electromechanical conversion (type C5)	348
11.3.1. Work at the Universities of Durham and Edinburgh (UK)	350
11.3.2. Work at the University of Uppsala (Sweden).	351
11.3.3. Work at the Delft University of Technology (Netherlands)	355
11.3.4. The SEAREV wave energy converter (CNRS, Ecole Centrale de Nantes, Ecole Normale Supérieure de Cachan).	356
11.4. Fluctuations of power produced by wave energy converters	358
11.5. Bibliography	363

Chapter 12. Ocean Thermal Energy Conversion: A Historical Perspective.	367
G�rard NIHOUS and Michel GAUTHIER	
12.1. The thermal resource of the oceans	367
12.1.1. The origin of the thermal resource	367
12.1.2. Distribution and variability of the thermal resource	371
12.2. Main principles of ocean thermal energy conversion	373
12.2.1. An inverse refrigerator	373
12.2.2. Small temperature differences.	375
12.3. Georges Claude, the pioneer	378
12.3.1. The beginning of an adventure	378
12.3.2. The land-based plant in Cuba	379
12.3.3. The end of a dream in Brazil	381
12.4. A renaissance at the end of the 20th Century?.	383
12.4.1. The Mini-OTEC Project	383
12.4.2. The OTEC-1 Project	385
12.4.3. Land-based OTEC pilot project in Nauru	387
12.4.4. Test of suspended cold water pipe (NOAA)	388
12.4.5. Test to install a segment of cold water pipe on the sea bed.	391
12.4.6. Net Power Producing Experiment	393
12.4.7. The setbacks of an Indo-Japanese project.	399
12.5. Reflections	400
12.6. Bibliography	401
Chapter 13. Ocean Thermal Energy Conversion: Solutions Studied	405
Virginie LELARGE, Thierry BOUCHET, Brice HERMANT, Aur�lien BOUHIER, Julian BERROU and C�dric AUVRAY	
13.1 The industrial approach to ocean thermal energy conversion	405
13.2. The energy conversion system at the heart of OTEC.	406
13.2.1. Thermodynamic cycles.	406
13.2.2. Major components of the “energy system”	415
13.2.3. The fluids.	422
13.3. Integration of OTEC plants.	435
13.3.1. Onshore and offshore plants.	435
13.3.2. Different solutions for the platform	441
13.4. An OTEC plant in the marine environment	452
13.4.1. Environmental data which have an impact on the functionality of OTEC	452
13.4.2. OTEC, a form of energy which respects the environment, but with points to be carefully monitored	455
13.4.3. A regulatory framework which must be consolidated.	459
13.4.4. Reflections	460

13.5. Conclusion	461
13.6. Bibliography	461
Chapter 14. Electrical Conversion Systems	463
Jacques COURAULT	
14.1. Historical introduction	463
14.2. General facts	464
14.2.1. Analysis of the conversion solutions	468
14.2.2. Requirements of the grids	469
14.2.3. Associated machines and conversions	473
14.3. Voltage inverters in pulse width modulation	488
14.3.1. DC link	494
14.3.2. Currents in DC feed	499
14.3.3. Design of the DC link	509
14.3.4. DC bus technology	515
14.3.5. Design of the condensers	516
14.4. Storage	519
14.5. Control of the voltage E_d	521
14.5.1. Stability	522
14.6. Filtering the output voltages	525
14.6.1. The possible filters	526
14.7. Transmission	536
14.7.1. Note about cables	537
14.7.2. The possible transmission diagrams	546
14.7.3. Communication	551
14.7.4. Compensation	551
14.8. Technology	553
14.8.1. Cooling circuits	553
14.8.2. Cooling the semi-conductors	556
14.8.3. Exchanger	562
14.8.4. The power diagram	563
14.8.5. Elements of the control system	564
14.9. Maintenance	567
14.10. Conclusion	567
14.11. Bibliography	569
Chapter 15. Cables for Collecting and Transmitting Energy Produced by Offshore Technologies	571
Pierre ARGAUT	
15.1. Introduction	571
15.2. General facts	572
15.3. Functions of high-voltage cable systems	574

15.3.1. Cable system for transmitting alternating current	575
15.3.2. Single-core cable system for DC function.	592
15.3.3. Connecting accessories.	592
15.4. Manufacture of submarine cables	606
15.4.1. Introduction	606
15.4.2. Conductor	609
15.4.3. Insulation	611
15.4.4. Application of the metallic screen	612
15.4.5. Sheathing	613
15.4.6. Assembly or lay-up	613
15.4.7. Armoring	615
15.4.8. Routine testing.	616
15.5. Principles and tools for the design of submarine cables	616
15.5.1. Electrical design	616
15.5.2. Transmission capacity	616
15.5.3. Physical properties of the materials used	620
15.5.4. Armor	622
15.6. Tests of submarine cables.	623
15.6.1. Development testing	623
15.6.2. Prequalification testing.	624
15.6.3. Type testing	624
15.6.4. Routine testing.	625
15.6.5. Testing on samples	625
15.6.6. Testing after installation	626
15.7. Specificities of DC cables	626
15.8. Specificities of dynamic cables	626
15.9. Electrical characteristics of submarine cables	626
15.9.1. Conventional formulae	627
15.9.2. Work in progress within CIGRE	628
15.10. New advances presented during JICABLE 2011	628
15.11. Bibliography.	629
List of Authors	633
Index	637
