Foreword	ix
Chapter 1. Introduction and General Points	1
1.1. Introduction: the audience of this book	1
1.1.1. What is applied (or subsurface) geophysics?	2
1.1.2. The spirit of this book: affordable methods on a technological and financial level.	4
1.1.3. An example to begin	6
1.1.4. Drawing maps in isovalues	8
1.2. Direct method, inverse method	9
1.3. Sampling quantities on the surface, and which resolution can be reached underground?	16
1.3.1. General points about measuring protocols	16
1.3.2. The issue of the measuring grid	18
1.3.3. The question of georeferencing.	22
1.3.4. Mapping types of prospecting: point-by-point, “walking” or drones	22
1.4. Adapting the models to the targets	25
Chapter 2. Direct Current Electrical Methods	27
2.1. The electricity used in geophysics	27
2.1.1. The current flowing in the ground	27
2.1.2. Resistivity	29
2.1.3. Separating volume conductivity from surface conductivity	34
2.2. Ground resistance	34
2.2.1. A first approach using hemispherical electrodes.	35

2.2.2. Realistic electrodes: metal posts	37
2.3. The basic array for electrical prospecting	38
2.3.1. Stage 1: what is the potential at the distance (r) from the electrode?	38
2.3.2. Stage 2: describing “point” electrodes in more detail.	40
2.3.3. Stage 3: setting up all the electrodes: two transmitting electrodes and two measuring electrodes	43
2.3.4. Stage 4: guarding against intruders	48
2.4. Dangers involved in electrical prospecting and safety regulations and rules	49
2.5. Apparent resistivity	51
2.5.1. A note about reciprocity	55
2.6. Arrays in electrical prospecting: depth of investigation and sensitivity	56
2.6.1. Depth of investigation and sensitivity	58
2.7. Electrical resistivity tomography	60
2.7.1. ERT arrays and sequences.	61
2.7.2. Using the programs RES2DMOD and RES2DINV.	66
2.8. 3D tomography.	74
2.9. Direct current electrical resistivity mapping	76
2.10. Vertical electrical sounding (VES, or in short, electrical sounding).	78
2.10.1. VES and horizontally layered ground	78
2.10.2. Difficulties and traps involved in electrical sounding.	86
2.10.3. Carrying out vertical electrical sounding	90
2.11. The rectangle method	96
2.12. The mise-à-la-masse method.	97
2.12.1. Example.	102
2.13. Time lapse (or simply “monitoring”) in electrical methods.	102
2.14. A note about measuring ground resistance.	103
Chapter 3. The Spontaneous Polarization Method	105
3.1. The principle of SP	105
3.2. The origin of the potentials in SP	107
3.2.1. The electrodes.	107
3.2.2. The sources of SP related to the Nernst equation	111
3.2.3. The sources of SP related to the electrofiltration equation and the application to aquifers and leakages	114

Chapter 4. The Induced Polarization (IP) Method	121
4.1. The principle of induced polarization	121
4.2. Three types of measurements: temporal, frequency and spectral	124
4.2.1. Temporal IP	124
4.2.2. The so-called frequency IP	128
4.2.3. Phase measurement IP	130
4.2.4. Spectral induced polarization	131
Chapter 5. Equipment	135
5.1. Electrodes, wire bobbins and cables	135
5.2. Equipment and methods used for spontaneous polarization	136
5.2.1. Getting rid of disturbances and taking a good SP measurement	137
5.2.2. Measurement fluctuations	138
5.3. Equipment and approaches used for direct current methods	138
5.3.1. Adapting the impedance for the transmission of electricity	139
5.3.2. Moving from direct to alternating current	142
5.3.3. Alternating current transmitters	145
5.3.4. “High voltage” transmitters	152
5.4. Equipment for induced polarization	155
Chapter 6. An Acquisition System Designed for the Electrical Prospection of Soil	157
6.1. The presentation of the “open source” project	157
6.2. The preliminary study	158
6.2.1. The analysis	158
6.3. Choosing the components	158
6.3.1. The microcontroller	158
6.3.2. The communication protocols of the microcontroller	160
6.3.3. The analog–digital converter	162
6.3.4. From the man–machine interface to data saving	165
6.3.5. The RTC module and data saving	166
6.4. Outline of the layout of components	167
6.4.1. Connections	167
6.4.2. List	168
6.5. Preparing the microSD card	168
6.6. Running the program on the microcontroller	170
6.6.1. Additional configuration settings	173
6.7. The program and its menus	174
6.7.1. Initialization steps for the device	174
6.7.2. Presentation of the menus	176

6.8. A practical example of how the device is used	177
6.8.1. Preliminary configuration steps	177
6.8.2. Taking the measurements	178
6.8.3. The result file	180
Appendix	181
Bibliography	187
Index	189
