Foreword	ix
Philippe GUILLERMAIN† and François SCHLOSSER	
Entrepreneur’s Tribune: Geotechnics is at the Heart of Our Projects	xi
Pascal LEMOINE and Eric DURAND	
Preface	xiii
Acknowledgments	xix
Symbols and Notations	xxi
Introduction	lv
Chapter 1. Soil Hydraulics: On-Site Water Tests.	1
1.1. Water in the soil: basics	1
1.1.1. General assumptions: water continuity condition in soil	1
1.1.2. Water velocity in soil	2
1.2. Darcy’s law	4
1.2.1. Head of water	4
1.2.2. Hydraulic gradient	5

1.3. Generalization to flow networks	7
1.3.1. Three-dimensional medium: Laplace equation	7
1.3.2. Two-dimensional flow	8
1.4. Flow forces	10
1.4.1. Determination of flow forces	10
1.4.2. Critical gradient: boiling phenomenon	11
1.4.3. Role of pore pressures in soil	12
1.5. On-site measurement of soil permeabilities	13
1.5.1. Pumping test	14
1.5.2. Lefranc-type local permeability test	20
1.5.3. Lugeon tests: experimental analysis and practical interpretation	27
1.5.4. General conclusion	33
1.6. Practical applications	34
1.6.1. Interpretation of an actual pumping test	34
1.6.2. Interpretation of a real Lefranc-type test	38
1.6.3. Practical application of a Lugeon test	43
1.6.4. Experimental data: permeability of soils	44
1.6.5. Soil water level measurements: piezometers	47
1.6.6. Micro-reel permeability measurements	47
1.7. References	48
Chapter 2. Fundamental Principles of Soil Mechanics	51
2.1. Short-term and long-term soil behaviors	51
2.1.1. Concepts of short-term and long-term	51
2.1.2. Concepts of soil friction and cohesion	52
2.2. Soil consolidation and settlement	56
2.2.1. Preamble	56
2.2.2. Mechanical analogy	57
2.2.3. Oedometer tests	60
2.2.4. Terzaghi consolidation theory	65
2.2.5. Practical correlations between compressibility and creep parameters	76
2.3. Shear strength of soil	76
2.3.1. Preamble	76
2.3.2. Shear strength of granular soil	79
2.3.3. Shear strength of fine soil	80
2.3.4. Residual shear strength of soil	85
2.3.5. Corresponding states theorem	85

2.4. Swelling-shrinkage of clay soil	88
2.4.1. Preamble	88
2.4.2. Swelling-shrinkage mechanism	88
2.4.3. Geotechnical survey and diagnosis methodology	89
2.4.4. In the event of damage due to draught: structural solutions	95
2.5. Slope stability	99
2.5.1. Preamble	99
2.5.2. Landslide modes and their origins	100
2.5.3. Failure mechanisms	102
2.5.4. Stability calculation approaches	109
2.5.5. Studies and practical calculations of stability	114
2.5.6. Solutions for improving stability by water evacuation	116
2.6. Conventional safety coefficients	117
2.6.1. Definition of safety coefficient	117
2.6.2. Conventional values	118
2.7. Applications	122
2.7.1. Study of an embankment on soft soil: calculation of bearing capacity and settlements.	122
2.7.2. Analysis of damage to a pavilion due to the swelling/shrinkage of clay	122
2.7.3. Parametric study of typical case stability	124
2.7.4. Correlations between compressibility parameters and test validity	127
2.7.5. Correlations between shear parameters	138
2.8. References	150
Chapter 3. Geotechnical Expertise	155
3.1. Preamble	155
3.2. Expertise on actual project cases	156
3.2.1. Housing project	157
3.2.2. Hospital center project	161
3.2.3. The issue of water	165
3.2.4. Predictions and measurements of the settlements of a thick raft of an HRB tower	170
3.2.5. Failure in a nailed wall of a motorway structure.	178
3.3. Judicial expertise	183
3.3.1. Judicial expertise and the justice expert.	183
3.3.2. Some cases of judicial expertise	186

3.4. Examples of rehabilitation (load balance)	211
3.4.1. Rehabilitation of a building on isolated footing	212
3.4.2. Rehabilitation of building on piles	213
3.5. Conclusion	216
3.6. References	218
French, European and ISO Standards in the Field of Geotechnics	221
Index	253
Summaries of Other Volumes.	257
