Introduction	ix
Chapter 1. Light Frames (Wooden Frames)	1
1.1. Commonest solution: platform-frame-like or balloon-frame-like curtain walls framed with studs/mullions	6
1.2. Types of connections in wooden construction	7
1.2.1. Head-to-head butt joint	7
1.2.2. Head-to-side butt joint	9
1.2.3. Lap joints	11
1.2.4. Nailed connections	12
1.2.5. Screwed connections	14
1.2.6. Bolted connections	14
1.2.7. Tooth plate connections	14
1.2.8. Glued connections	15
1.3. Types of connections between structural sub-systems	15
1.3.1. Interfacing the frames of the front façade and the roof	15
1.3.2. Interfacing the frames of the side walls and the roof.	17
1.3.3. Gable walls	21
1.3.4. Opaque enclosures	29
1.3.5. Back walls	30
1.3.6. Connection between the roof of a building and the roof of the greenhouse attached to it	42
1.4. Alternative structural solution: light-frame curtain walls supported by horizontal purlins	42
1.5. Alternative structural solution: trussed light-frame structures	43
1.5.1. Trusses and trussed portals or semi-portals orthogonal to the front façade	44
1.5.2. Light-frame trussed portals parallel to the front façade	44

1.6. Criteria for the construction of light-frame trusses and trussed portal frames	45
1.6.1. Chords, diagonals and uprights overlapped on different planes.	45
1.6.2. Chords, diagonals and uprights on the same plane.	45
1.6.3. Transversal connection of portal frames	46
1.6.4. Bracing strategies in light frames	46
1.7. Intermixing parts of timber frames into light frames	51
1.8. Analogies with cold-rolled light frames	52
1.9. Arched and vaulted construction in light frames	53
1.9.1. Lamella vaults.	53
1.9.2. Geodesic domes.	57
Chapter 2. Timber Frames	61
2.1. Intermixing light-frame parts into timber frames	62
2.1.1. Light frame completely additional to the timber frame	63
2.1.2. Combining timber frames and light frames.	64
2.2. Connections in timber-frame greenhouses.	75
2.2.1. Traditional connections in timber frames.	76
2.2.2. Modern connections in timber frames.	77
2.3. Structural solutions with the primary beams of the frames orthogonal to the front façade.	110
2.3.1. Post-and-beam greenhouses with primary beams perpendicular to the front façade	111
2.3.2. Trussed post-and-beam greenhouses with primary beams perpendicular to the front façade	118
2.3.3. Portal frames perpendicular to the front façade	120
2.3.4. Spans of the secondary structural elements in greenhouses having the principal beams orthogonal to the main façades.	129
2.3.5. Frames or portal frames, solid or trussed, parallel to the front façade	130
2.4. Pole construction.	132
2.4.1. Treating timber poles for a longer life span.	132
2.4.2. Solutions for cantilevering the poles from the ground.	134
2.4.3. Solutions for connecting girders or beams to the poles	136
2.4.4. Pole greenhouse construction	137
2.5. Bracing strategies in timber frames	149
2.5.1. Bracing with cables or rods	151
2.5.2. Bracing with short massive diagonals.	152
2.5.3. Bracing the bays with full-length diagonals connected with butt joints by means of steel plates	152
2.5.4. Bracing with full-length lap-joined diagonals	152

Chapter 3. Foundations	161
3.1. Foundation walls and foundation sills	161
3.2. Construction strategies for foundation walls	168
3.2.1. Preparing the ground for a foundation wall.	169
3.2.2. Boulders-and-mortar wall foundation	169
3.2.3. Brick masonry wall foundation	170
3.2.4. Conventionally mortared hollow concrete block wall foundation	170
3.2.5. Parged hollow concrete block wall foundations	172
3.2.6. Concrete foundation walls	172
3.2.7. Wooden-frame foundations	172
3.2.8. Timber foundations.	175
3.2.9. Pier foundations.	184
3.2.10. Insulation of the foundation wall.	184
3.2.11. The foundation wall as a sill	186
3.3. Drainage around the foundation wall	186
3.4. Pavements	187
3.5. Platform frame floors raised above the ground	188
Chapter 4. Heating and Cooling Systems; Watering Systems	191
4.1. Heating and cooling plants	191
4.1.1. Air-based systems.	191
4.1.2. Water-based systems	193
4.2. Heat recovery via air-to-air heat exchangers	193
4.3. Passive and low-energy heating and cooling solutions based on the thermal exchange with the ground	194
4.3.1. GAHT systems	195
4.3.2. Ground-air heat exchangers – Canadian wells	197
4.3.3. Considerations about the transfer of heat to remote masses by convection	199
4.3.4. Surface air-to-ground heat exchange (experimental)	202
4.4. Auxiliary heating systems.	204
4.4.1. Electric heating	206
4.4.2. Common stoves	209
4.4.3. Rocket mass stoves	209
4.4.4. Water systems coupled with burners or heat pumps	209
4.4.5. Active systems using renewable energy sources	210
4.4.6. Heat pumps	211
4.5. Auxiliary cooling systems	211
4.6. Integration of photovoltaic panels in greenhouses	213
4.7. Integration of passive solar heating panels in greenhouses.	214

4.8. Watering systems	215
4.8.1. Most common water sources	216
4.8.2. Water containers	217
4.8.3. Water distribution	217
4.9. Solutions for water catchment and storage suitable for self-building	219
4.9.1. Creation of low-cost ponds	220
4.9.2. Rainwater collection	221
Conclusion	225
