<b>Introduction</b> . . . . .	ix
<b>Chapter 1. Prolog – Overview of Types of Transparent Enclosures</b> . . . . .	1
1.1. Risks of condensation on transparent enclosures . . . . .	2
1.2. Essentials on glass panel enclosures . . . . .	5
1.2.1. Installation of glass panels . . . . .	6
1.3. Essentials on synthetic panel enclosures. . . . .	9
1.3.1. Ribbed panels . . . . .	10
1.3.2. Drained flat double panels . . . . .	11
1.3.3. Corrugated panels. . . . .	12
1.3.4. Synthetic films . . . . .	12
1.4. Curtain walls . . . . .	12
1.4.1. Detailing at vertical corners . . . . .	16
1.4.2. Detailing the connection between the front wall and the roof. . . . .	20
1.4.3. Detailing the connection between the side walls and the roof. . . . .	23
1.4.4. Detailing the connection between the roof and the building front façade in attached greenhouses . . . . .	27
1.4.5. Detailing the connection between the roof and the back wall (for stand-alone greenhouses). . . . .	29
1.4.6. Detailing the transition between an opaque part of the roof and a transparent one . . . . .	31
1.4.7. Detailing the vertical joints between greenhouse and building . . . . .	33
1.4.8. Connecting external systems to the mullion-and-transom system . . . . .	35
1.4.9. Pressure caps on roofs . . . . .	36
1.4.10. Bent plates as anchoring devices. . . . .	37
1.4.11. The façade of windows as an alternative to the curtain wall. . . . .	39
1.4.12. The façade of windows at the lintels and at the transoms . . . . .	45

1.4.13. Connection between mullion or transoms and windows by means of setbacks in the profiles . . . . .	50
1.4.14. Windows and doors . . . . .	52
1.5. Glazing with glass panels . . . . .	82
1.5.1. Glass . . . . .	82
<b>Chapter 2. Transparent Plastic Enclosures . . . . .</b>	<b>95</b>
2.1. Materials for synthetic panels. . . . .	97
2.1.1. Polycarbonate . . . . .	97
2.1.2. Acrylic . . . . .	97
2.1.3. Fiberglass . . . . .	98
2.2. Commonalities between flat polycarbonate, acrylic or fiberglass panels . . . .	99
2.2.1. Working with polycarbonate sheets . . . . .	100
2.2.2. Working with acrylic sheets . . . . .	101
2.2.3. Working with fiberglass panels . . . . .	101
2.2.4. Installation of corrugated polycarbonate, acrylic or fiberglass panels . . .	102
2.3. Installation of multi-wall polycarbonate or acrylic panels . . . . .	103
2.3.1. Anchorage by direct screwing . . . . .	104
2.3.2. Anchorage by means of channels . . . . .	105
2.3.3. Anchorage by means of profiled connectors embedded in the joints at the edge of the panels . . . . .	106
2.3.4. Anchorage by means of pressure caps in curtain-wall schemes. . . . .	107
2.4. Connection of mullions and/or transoms to the transparent panels by means of pressure caps . . . . .	115
2.4.1. Example of simple and low-cost openable wooden window constructions suitable for self-building. . . . .	116
2.5. Further considerations related to solar shading . . . . .	132
2.5.1. Shading paints. . . . .	133
2.5.2. External overhangs . . . . .	134
2.5.3. External Venetian blinds . . . . .	136
2.5.4. External horizontal fins. . . . .	137
2.5.5. Internal Venetian blinds . . . . .	138
2.5.6. Internal horizontal fins . . . . .	138
2.5.7. External or internal fixed skylight grids or roof grids . . . . .	140
2.5.8. Detached external canvases/nets. . . . .	144
2.5.9. Attached external canvases/nets/shade cloths/rollers . . . . .	145
2.5.10. External curtains/rollers. . . . .	146
2.5.11. Detached internal canvases . . . . .	146
2.5.12. Attached internal canvases/nets/shade cloths/curtain rollers. . . . .	149
2.6. Thermal insulation. . . . .	153
2.6.1. Resistive insulation . . . . .	153
2.6.2. Reflective insulation . . . . .	159

---

2.6.3. Cavities . . . . .	164
2.7. Movable insulation . . . . .	165
2.7.1. Movable insulation panels . . . . .	167
2.7.2. Removable insulation panels . . . . .	170
2.7.3. Thermal blankets and curtains . . . . .	171
2.8. Solar reflectors . . . . .	175
2.8.1. Diffuse solar reflectors . . . . .	175
2.8.2. Specular solar reflectors . . . . .	176
2.8.3. Fixed solar reflectors . . . . .	176
2.8.4. Movable solar reflectors . . . . .	179
2.9. Mechanical systems for operating the openable frames . . . . .	179
2.9.1. Mechanical system for opening rows of openings . . . . .	179
2.9.2. Mechanical systems for opening single windows and skylights . . . . .	180
2.9.3. Actuator control . . . . .	180
2.10. Opaque envelopes . . . . .	181
2.11. Thermally broken external balconies . . . . .	185
2.12. Paints, stains and preservatives . . . . .	185
<b>Chapter 3. Film-enclosed Greenhouses . . . . .</b>	<b>187</b>
3.1. Characteristics of polyethylene films . . . . .	188
3.2. Alternatives to polyethylene films . . . . .	191
3.3. Strategies for installing the films . . . . .	192
3.3.1. Fixing strategies entailing rotation . . . . .	194
3.3.2. Fixing strategies not entailing rotation . . . . .	195
3.4. Specific challenges in polyethylene-enclosed wooden greenhouses . . . . .	198
3.4.1. Fitting the structure to avoid tearing the films . . . . .	198
3.4.2. Consequences of vapor condensation in film-enclosed greenhouses . . . . .	202
3.5. Multiple polyethylene film layouts . . . . .	204
3.5.1. Inflated multiple envelopes . . . . .	205
3.5.2. Inflated ETFE cushions . . . . .	206
3.6. Film-enclosed greenhouses for hot climates . . . . .	207
3.6.1. Orientation of hot-climate growing greenhouses . . . . .	208
3.6.2. Solar shading for hot-climate greenhouses . . . . .	209
3.6.3. Natural ventilation for hot-climate greenhouses . . . . .	211
3.6.4. Construction schemes for hot-climate greenhouses, with particular reference to wood . . . . .	219
3.7. Framed structural layouts adopting combinations of portal frames . . . . .	233
3.8. Bamboo greenhouses . . . . .	238
