Preface	ix
1 Introduction to Contact Problems in Structural Mechanics	1
1.1 Solving a contact problem numerically via the penalty method	3
1.2 Numerical solution of a contact problem using the multiplier method	8
1.2.1 Preliminaries: problems with equality constraints	8
1.2.2 Problems with inequality constraints	10
1.3 Numerical solution of a contact problem by the augmented Lagrangian method	15
1.4 Book synopsis	21
2 Contact Kinematics	23
2.1 Motions and strains	23
2.2 Potential contact surfaces	25
2.3 Normal contact kinematics	26
2.4 Variation of kinematic quantities with respect to time	29
2.5 Tangential contact kinematics – Relative velocity	34
3 Sthenics of Contact	37
3.1 Stresses in bodies	37
3.2 Contact stress vector	38
4 The Constitutive Law	39
4.1 Hyperelastic materials	39
4.2 Elastoplastic materials with isotropic hardening	41
5 Contact Laws	45
5.1 Normal contact law	45
5.2 Tangential contact law	47
6 Strong Formulation of the Contact Problem	51
6.1 Field equations	51
6.2 Boundary conditions	52
6.3 Initial conditions	53
6.4 Remarks	53

7	Weak Formulation of the Contact Problem	55
7.1	Transforming the contact laws into equalities	55
7.2	Preliminary ideas for the weak form	59
7.3	Weak form of the contact problem	60
7.4	Equivalence between the strong and the weak forms	62
7.5	Final remarks	66
8	Matrix Equations of the Contact Problem	69
8.1	Introduction	69
8.2	Meshes	70
8.3	Matrix notation in finite elements	72
8.4	The element nodal vectors	73
8.5	Interpolation of positions, displacements and virtual velocities	75
8.5.1	Interpolation on the contactor surface	75
8.5.2	Interpolation on the target surface	75
8.6	Interpolation of multipliers	76
8.6.1	Definition of the vector λ	76
8.6.2	Interpolation of λ	78
8.6.3	Interpolation of λ^*	78
8.7	Discretization of the element virtual contact power $(\mathcal{P}_{\text{contact}}^*)^{e(1)}$	78
8.7.1	Explicit expressions for $\{\Phi_{\text{contact}}^{e(1)}\}$, $\{\Phi_{\text{contact}}^{e(2)}\}$ and $\{\mathbf{R}_{\Lambda}^{e(1)}\}$ in the three cases: algorithmic <i>gap</i> , algorithmic <i>slip</i> and algorithmic <i>stick</i>	85
8.8	System of matrix equations for the contact problem	88
8.8.1	Global nodal vectors	88
8.8.2	Discretization of the classical terms	90
8.8.3	Assembly of element virtual contact powers	91
8.8.4	System of matrix equations	94
8.9	Abnormal contact stresses	96
8.9.1	First cause of abnormal contact stresses	96
8.9.2	Second cause of abnormal contact stresses	98
8.9.3	Third cause of abnormal contact stresses	98
8.10	Projection calculation: contact detection	99
8.11	Discrete expression of the slip $\mathbf{V}_T \Delta t$	101
8.12	Physical units	106
8.13	Chapter summary	107
9	Solution of the Quasi-static Contact Problem	109
9.1	System of equations for the static contact problem	109
9.2	Incremental loop initialization: the vectors \mathbf{U}_0, Λ_0	111
9.3	Calculation of step $n \geq 1$: calculating \mathbf{U}_n, Λ_n	111
9.3.1	Principle of the iterative Newton–Raphson scheme	111
9.3.2	Tangent matrix	113
9.3.3	Block matrix inversion	114
9.3.4	Iterative loop initialization: the vectors \mathbf{U}_n^0 and Λ_n^0	115
9.4	Solution algorithm	115
9.5	Calculation method for the tangent matrix	117
9.5.1	Direct method	117
9.5.2	Indirect method	118
9.5.3	Restriction to the contact tangent matrix	121

9.6	Calculation of the contact tangent matrix	123
9.6.1	Variations of the arguments of the functional $\mathcal{P}_{\text{contact}}^*$	123
9.6.2	Calculation of the variation $\delta\mathcal{P}_{\text{contact}}^*$	126
9.6.3	Calculation of the variation $(\delta\mathcal{P}_{\text{contact}}^*)^{e(1)}$	127
9.6.4	Discretization of the variation $(\delta\mathcal{P}_{\text{contact}}^*)^{e(1)}$ – Element contact tangent matrix $[\mathbf{K}_{\text{contact}}^e]$	133
9.6.5	Discretization of the variation $\delta\mathcal{P}_{\text{contact}}^*$ – Contact tangent matrix $[\mathbf{K}_{\text{contact}}]$	135
9.6.6	Explicit expression for the element contact tangent matrix $[\mathbf{K}_{\text{contact}}^e]$	138
9.6.7	$[\mathbf{K}_{\text{contact}}^e]$ in the case of the algorithmic <i>gap</i> at the considered integration point	144
9.6.8	$[\mathbf{K}_{\text{contact}}^e]$ in the case of algorithmic contact with <i>slip</i> at the considered integration point	144
9.6.9	$[\mathbf{K}_{\text{contact}}^e]$ in the case of algorithmic contact with <i>stick</i> at the considered integration point	146
9.6.10	Symmetry of the contact tangent matrix $[\mathbf{K}_{\text{contact}}]$	147
9.7	Particular case of two non-contacting bodies	148
9.8	Particular case of the frictionless problem	149
9.8.1	Algorithmic <i>gap</i> case at the considered integration point	150
9.8.2	Algorithmic contact with <i>slip</i> case at the considered integration point	152
9.9	Solution via the arc-length method	152
9.10	Physical units	154
9.11	Summary of the chapter	155
10	Numerical Examples of Quasi-static Contact	157
10.1	Contact patch test	157
10.2	Hertzian contact problem	159
10.2.1	Frictionless contact case	160
10.2.2	Case of frictional contact with $\mu = 0.3$	163
10.3	Rolling disk	167
10.4	Contact between two beams	171
10.4.1	Dead load	171
10.4.2	Follower load	176
10.5	Contact of two pressurized membranes	176
10.5.1	Centered membranes	180
10.5.2	Membranes staggered along x	182
10.6	Extrusion of an elastoplastic cylinder	184
10.7	Interference fit problem	189
10.7.1	Abnormal contact stresses	192
10.7.2	Influence of the mesh	194
10.8	Conclusion	194
11	Solution of the Dynamic Contact Problem	197
11.1	A brief review of the computational methods in dynamic contact	197
11.2	Solution of the dynamic contact problem via Newmark's algorithm	200
11.2.1	Initializing the incremental loop: the vectors $\mathbf{U}_0, \mathbf{V}_0, \mathbf{A}_0$ and $\mathbf{\Lambda}_0$	202
11.2.2	Calculation for a step $n \geq 1$: calculating $\mathbf{U}_n, \mathbf{V}_n, \mathbf{A}_n, \mathbf{\Lambda}_n$	202
11.2.3	Initializing the iterative loop: the vectors $\mathbf{U}_n^0, \mathbf{V}_n^0, \mathbf{A}_n^0, \mathbf{\Lambda}_n^0$	207
11.3	Solution algorithm	208
11.4	Summary	210

12 Numerical Examples of Dynamic Contact	213
12.1 Impact of two elastic rods	213
12.1.1 Analytical solution	214
12.1.2 Numerical applications	217
12.1.3 Numerical solution	218
12.2 Disk impacting a rigid plane	220
12.2.1 Frictionless case	222
12.2.2 Case with friction $\mu = 0.3$	224
12.3 Disk falling into a funnel	228
12.3.1 Frictionless case	231
12.3.2 Case with friction $\mu = 0.4$	234
12.4 Final remarks	236
Appendix A: Variations of Kinematic Quantities	239
References	247
Index	257
