Foreword	vii
Bruno EVEN	
Preface	xi
Introduction	xvii
Chapter 1. Vehicle Architecture	1
1.1. Generalities and levels of autonomy	1
1.2. Evolution of features associated with autonomy	3
1.2.1. Features and technologies for the automobile	3
1.2.2. Features and technologies for aeronautics	5
1.3. Vehicle architecture and control chain	7
1.3.1. Case of aeronautics	7
1.3.2. Automobile case	37
1.4. Vehicle architecture review	40
Chapter 2. Features and Autonomy	41
2.1. Simple or comfort control features	42
2.1.1. Features related to land vehicles	42
2.1.2. Features related to airborne systems: helicopter pilot assistance	47
2.2. Complex features specific to a phase of use.	52
2.2.1. Automobile: parking assistance	52
2.2.2. Aeronautics: landing and parking assistance	52
2.3. Complex traffic and security features	70
2.3.1. Detection of other vehicles and traffic management	70
2.3.2. Obstacle detection	78

Chapter 3. Sensors and Technologies	81
3.1. Introduction.	81
3.1.1. Proprioceptive sensors	84
3.1.2. Exteroceptive sensors	90
3.2. Sensor review and comparison	119
Chapter 4. Data Mining and Fusion	121
4.1. Introduction to the concept of data fusion	121
4.1.1. Types of data fusion	123
4.1.2. The steps of data fusion	124
4.1.3. Data fusion level	125
4.1.4. Introduction to the Kalman filter	127
4.2. DTMO: detection and tracking of moving objects	130
4.2.1. Automobile examples	130
4.2.2. Examples in aeronautics	134
4.3. SLAM: mapping and localization.	149
4.3.1. Methods for identifying the vehicle environment	150
4.3.2. Communications between vehicles	152
4.3.3. Example of landing automation: EAGLE project	154
Conclusion	159
References	161
Index	167
