Introduction	xi
List of Notations and Figures	xv
Part 1. Integration	1
Chapter 1. Integration of Continuous Functions	3
1.1. Neumann spaces	3
1.2. Continuous mappings	7
1.3. Cauchy integral of a uniformly continuous function	10
1.4. Some properties of the integral	13
1.5. Dependence of the integral on the domain of integration	16
1.6. Continuity of the integral	19
1.7. Successive integration	21
Chapter 2. Measurable Sets	23
2.1. Why introduce measurable sets?	23
2.2. Some properties of the measure of an open set	25
2.3. Definition of measurable sets and their measure	28
2.4. First properties of the measure	32
2.5. Additivity of the measure	34
2.6. Countable union and countable intersection of measurable sets	37
2.7. Continuity of the measure	40
2.8. Translation invariance and the product measure	44
2.9. Negligible sets	47

Chapter 3. Measures	51
3.1. Space of measures $\mathcal{M}(\Omega; E)$	51
3.2. Equicontinuity of bounded subsets of $\mathcal{M}(\Omega; E)$	54
3.3. Sequential completeness of $\mathcal{M}(\Omega; E)$	57
3.4. Continuity of the $\langle \cdot, \cdot \rangle$ mapping	59
3.5. Identification of continuous functions with measures	60
3.6. Regularization of measures	66
3.7. Regularization of functions	73
Chapter 4. Integrable Measures	79
4.1. Definition of integrable measures	79
4.2. Space of integrable measures $L^1(\Omega; E)$	82
4.3. Some properties of $L^1(\Omega; E)$	85
4.4. Regularization in $L^1(\Omega; E)$	87
4.5. Sequential completeness of $L^1(\Omega; E)$	88
Chapter 5. Integration of Integrable Measures	91
5.1. Integral of an integrable measure	91
5.2. Linearity and continuity of the integral	95
5.3. Positive measures, real-valued integrals	97
5.4. Examples of value spaces	100
5.5. The case where E is not a Neumann space	101
Chapter 6. Properties of the Integral	105
6.1. Additivity with respect to the domain of integration	105
6.2. Continuity with respect to the domain of integration	109
6.3. Contribution of negligible sets	113
6.4. Image of a measure under a linear mapping	114
6.5. Image under a linear mapping	116
6.6. Restriction and support	119
6.7. Differentiation under the integral sign	121
Chapter 7. Change of Variables	123
7.1. Image of a measurable set	123
7.2. Determinant of d vectors	125
7.3. Measure of a parallelepiped	127
7.4. Change of variable in the Cauchy integral	130
7.5. Change of variable in a measure	137
7.6. Change of variable in an integrable measure	141
7.7. Product of a measure with a continuous function	143
7.8. Change of variable in an integral	146
7.9. Affine change of variables	148

Chapter 8. Multivariable Integration	151
8.1. Permutation of variables in a measure of measures	151
8.2. Integration of an integrable measure of measures	152
8.3. Separation of variables in an integral of a continuous function	155
8.4. Separation of variables of a measure	158
8.5. Separation of variables	161
8.6. Fubini's theorem	164
Part 2. Lebesgue Spaces	169
Chapter 9. Inequalities	171
9.1. Elementary inequalities	171
9.2. Inequalities for continuous functions	174
9.3. Young's convolution inequality	177
9.4. Properties of regularizations of continuous functions	179
Chapter 10. $L^p(\Omega; E)$ Spaces	183
10.1. Definition of $L^p(\Omega; E)$	183
10.2. Separability of $L^p(\Omega; E)$	188
10.3. Some properties of $L^p(\Omega; E)$	189
10.4. Properties of $L^\infty(\Omega; E)$	192
10.5. Approximation via regularizations and density	196
10.6. Completeness of $L^p(\Omega; E)$	199
10.7. Remarks on methods of construction	203
Chapter 11. Dependence on p and Ω, Local Spaces	207
11.1. Dependence on p	207
11.2. $L^p_{\text{loc}}(\Omega; E)$ spaces	211
11.3. Localization–extension	217
11.4. Dependence on Ω	220
11.5. Infinite gluing on Ω and continuity in p	223
Chapter 12. Image Under a Linear Mapping	229
12.1. Image under a linear mapping and dependence on E	229
12.2. Image under a multilinear mapping	233
12.3. Images in Banach and Hilbert spaces	239
12.4. Images in local spaces	242
Chapter 13. Various Operations	245
13.1. Image under a semi-norm of E	245
13.2. Powers	249

13.3. Extensions	252
13.4. Step measures	254
13.5. Density and separability	258
13.6. Limit of a bounded sequence in $L^\infty(\Omega; E)$	261
Chapter 14. Change of Variable, Weightings	263
14.1. Change of variable	263
14.2. Regrouping and separation of variables	266
14.3. Permutation of variables	273
14.4. Weightings of measures	275
14.5. Weightings	278
Chapter 15. Compact Sets	283
15.1. Preliminaries	283
15.2. Compact subsets of $L^p(\Omega; E)$	286
15.3. Special cases of compactness	290
15.4. Compact subsets of $L^p_{\text{loc}}(\Omega; E)$	295
15.5. Compactness in intermediate spaces	297
Chapter 16. Duals	301
16.1. Uniform convexity of $L^p(\Omega; E)$	301
16.2. Canonical injection from $L^{p'}(\Omega; E')$ into the dual of $L^p(\Omega; E)$	310
16.3. Riesz representation theorems	315
16.4. Riesz–Fréchet theorem	320
16.5. Weak topology of $L^p(\Omega; E)$	322
16.6. *Weak topology of $L^\infty(\Omega; E)$	324
Part 3. Integrable Functions	329
Chapter 17. Measurable Functions	331
17.1. Measurable functions	331
17.2. Integral of a positive measurable function	337
17.3. Dominated convergence of positive functions	342
17.4. Spaces of classes of integrable functions	347
17.5. Completion and approximation in spaces of classes of functions	351
17.6. Some properties of spaces of classes of functions	357
17.7. Lebesgue points	359
17.8. Measures associated to classes of functions	363
17.9. Identity of the spaces of measures	366
Chapter 18. Applications	371
18.1. Equi-integrability	371

18.2. Dominated convergence	374
18.3. Image under a continuous mapping	377
18.4. Continuity with respect to increasing p (again)	380
18.5. Riesz representation theorem (again)	383
Appendix. Reminders	391
Bibliography	405
Index	409
