Preface	ix
Introduction	xiii
Chapter 1. General Remarks	1
1.1. Introduction.	1
1.2. Propagation of a sinusoidal electromagnetic wave.	1
1.2.1. Frequencies and wavelengths.	1
1.2.2. Radiation spectrum	4
1.3. The concept of photometry.	6
1.3.1. Geometric parameters	6
1.3.2. Radiance	9
1.3.3. Bouguer–Lambert law	12
1.3.4. Intensity	13
1.3.5. Lambert’s law – a surface’s emissivity	14
Chapter 2. Calculating Luminances	17
2.1. Introduction.	17
2.2. The black body: concept, luminance, Planck’s law and approximations	18
2.2.1. Paradoxically, the black body is defined with reference to its absorption	18
2.2.2. Black body luminance	19
2.2.3. Emittance from the black body	22
2.2.4. Approximations of the luminance of the black body	23
2.2.5. Writing the luminance in terms of frequency	25
2.3. Stefan–Boltzmann law	27
2.3.1. Establishing the law	27

2.3.2. A direct application.	29
2.4. Wien's laws.	32
2.4.1. Wien's displacement law	32
2.4.2. Wien's second law	34
2.4.3. Greenhouse effect.	35
2.5. Fraction of the total emittance of a black body radiated in a spectral band	38
2.5.1. An important tool: $G_{0-\lambda T}$ functions	38
2.5.2. An application.	42
2.6. Emissivity of any body: a general case of a non-black body	43
2.6.1. Definition of monochromatic emissivity	43
2.6.2. Definition of global emissivity: a tricky concept	45
2.6.3. Emissivity of a gray body: a particular case	45
2.7. Simple applications	48
Chapter 3. Emission and Absorption.	53
3.1. Introduction.	53
3.2. Absorption, reflection, transmission	53
3.3. Kirchhoff's law	56
3.4. Recap on the global absorption coefficient	57
3.4.1. General case	57
3.4.2. Case of the gray body	58
3.5. General case: multiple transfers.	59
3.6. Absorption: the Beer–Lambert law	61
3.6.1. Radiation transfer.	61
3.6.2. Beer's law	62
Chapter 4. Radiation Exchanges Between Surfaces	65
4.1. Introduction.	65
4.2. Classification.	65
4.3. The case of total influence	66
4.3.1. The case of two parallel plates. Lambert's law	66
4.3.2. Total influence between two black body surfaces, of temperatures T_w and T_a	68
4.3.3. Total influence between two surfaces	68
4.3.4. Total influence between two surfaces	69
4.3.5. Wall in total influence in an enclosure	71
4.3.6. Important note on the "thermal balance"	72
4.3.7. A practical approximation.	72
4.3.8. Complex system of radiant finished surfaces: geometric form factor	75
4.3.9. Application	79

Chapter 5. Analytic Applications	89
5.1. Introduction	89
5.2. Radiators, convectors and radiating fins	89
5.3. Radiation and oven	114
5.4. Radiation and metrology	123
5.4.1. Measuring a thermal conductivity	137
5.5. General problems	148
Chapter 6. Modeling and Simulations under ANSYS	169
6.1. Conduction, convection and radiation	169
6.2. Conduction and convection using ANSYS software	172
6.2.1. Representation of the temperature field	174
6.3. Radiation using ANSYS software	175
6.4. Examples of modeling and analysis with ANSYS	177
6.4.1. Simple thermal conduction	177
6.4.2. Mixing conduction/convection/isolation	180
6.4.3. Transient thermal conduction	182
6.4.4. Study of thermal transfers from a brick wall and a cement wall (application to an oven)	186
6.4.5. Study of stationary thermal conduction in a reservoir intersected by a tube	191
6.4.6. Stationary thermal conduction on a cylinder	196
6.4.7. Cooling of a puck in transitory thermal	199
6.4.8. Study of a heat exchanger	202
6.5. Study of a thermal exchanger on ANSYS	204
6.5.1. Effectiveness of the PCM	204
6.5.2. Parameterizing the analysis	204
6.5.3. Thermal exchanger without an PCM	207
6.5.4. Thermal exchanger with hydrated salt	207
6.5.5. Thermal exchanger with paraffin	210
6.5.6. Influence of heat flux	212
6.5.7. Comparing PCM	213
6.6. Conclusion	214
Appendix. $G_{0-\lambda T}$ Function Table	217
References	223
Index	225
