Foreword	ix
Introduction	xi
Chapter 1. The Scientific Representation of the Living World: A Dual Concept Between Nature's and Humans' Shares	1
1.1. Natural sciences: the given living world	2
1.1.1. Taxonomy: the observation of the living world	2
1.1.2. Systematics: the identification of the living world	10
1.2. Life sciences: the constructed living world	18
1.2.1. Biological sciences: the exploration of the living world	18
1.2.2. Bio-technosciences: the instrumentalization of the living world	25
Part 1. Singular Objects Moving Toward Reservation	35
Chapter 2. Exploitable Raw Materials	37
2.1. Genetic material: natural resources defined according to their conditions of appropriation	38
2.1.1. Appropriable natural things	41
2.1.2. Things on the verge of exclusive appropriation	45
2.2. Marine genetic resources: biological resources defined according to their destination	58

2.2.1. Traditional marine living resources exploited for food and industrial purposes	59
2.2.2. New marine biological resources searched for the purposes of scientific and biotechnological valorization	63
Chapter 3. Patentable Biotechnological Inventions	75
3.1. The patentability of life of any origin: an established principle	80
3.1.1. The uncontested patentability of inventions of microorganic origin	81
3.1.2. The logical acceptance of the patentability of inventions of macroorganic origin	87
3.2. The patentability of life in all its forms: a questionable reality.	98
3.2.1. An overall commodification of the living world.	99
3.2.2. A gradual privatization of research in life sciences	109
Part 2. Global Objects Moving Toward Sharing	117
Chapter 4. Residual <i>Res Communes</i>	119
4.1. <i>Res communes</i> due to disinterest	120
4.1.1. Non-appropriable things as a matter of principle	121
4.1.2. Things of common use.	134
4.2. Common resources at risk	137
4.2.1. The tragedy of the genetic pool.	138
4.2.2. The tragedy of the scientific “anticommons”	151
Chapter 5. Reconstructing the Commons	157
5.1. Renewal of the commons in a context of global interdependencies	160
5.1.1. Global public goods: a theoretical and global approach to the commons	162
5.1.2. Common-pool resources: a concrete and nuanced approach to the commons	166
5.2. An attempt to apply renewed figures of the commons to marine biodiversity and associated knowledge.	172
5.2.1. A desirable communitarization	172
5.2.2. A communitarization difficult to implement	186

Conclusion	197
Appendices	199
Appendix 1. Classical Marine Bioprospecting: Biochemistry and Genetic Engineering	201
Appendix 2. Modern Marine Bioprospecting: Metagenomics	203
Appendix 3. The Drug Research and Development Steps	205
Appendix 4. Risk Assessment in the Bioprospecting Process	207
Appendix 5. Aleatory Component Comparison in Fishing and Bioprospecting	209
Appendix 6. Patent Claims Over Genes of Marine Origin	211
Appendix 7. Illustrative Database on Marine Biotechnological Innovations	213
Bibliography	231
Index	263
