Introduction	xi
Chapter 1. Presentation of the Ovoproduct Matrix	1
Marc ANTON, Françoise NAU, Valérie LECHEVALIER and Anne MEYNIER	
1.1. Structure and composition of hen eggs	1
1.2. Biochemical and structural characteristics of egg proteins and lipids	5
1.2.1. Albumen proteins	5
1.2.2. Yolk lipoproteins and proteins	8
1.2.3. Yolk lipids	10
1.3. Physico-chemical properties and applications	12
1.3.1. Interfacial properties	12
1.3.2. Gelling properties	20
1.4. From eggs to egg products	25
1.4.1. Egg shell decontamination	28
1.4.2. Egg breaking and albumen/yolk separation	29
1.4.3. Egg product stabilization	30
1.4.4. Specialty egg products	36
1.5. Specific industrial applications	38
1.5.1. Egg yolk in sauces	38
1.5.2. Egg yolk in sweet products	40

1.5.3. Egg albumen for foaming products	42
1.5.4. Whole egg uses	44
1.6. Bibliography	45
Chapter 2. Spoilage of Egg Products	51
Sophie JAN, Florence BARON, Rémy COAT and Olivier GONÇALVES	
2.1. Introduction	51
2.2. Bacteria involved in shell egg spoilage	53
2.3. Bacteria involved in whole egg spoilage	55
2.3.1. <i>Bacillus Cereus sensu lato</i>	57
2.3.2. <i>Streptococcus</i> and <i>Enterococcus</i>	61
2.4. Bacterial metabolism that can affect whole egg	68
2.4.1. The whole egg as an optimal culture medium	68
2.4.2. Metabolism of <i>B. cereus sensu lato</i>	80
2.4.3. Metabolism of enterococci	93
2.4.4. Quorum sensing in spoilage phenomena	103
2.5. Synthesis and demonstration of potential markers of whole egg spoilage	107
2.5.1. Potential volatile markers	107
2.5.2. Organic acids as microbiological criteria	109
2.5.3. Other potential markers	113
2.5.4. Methods proposed in the literature for determining potential spoilage markers of egg products	114
2.6. Bibliography	115
Chapter 3. Characterizing the Spoilage of Egg Products using Targeted and Non-targeted Approaches	157
Rémy COAT, Boris GOUILLEUX, Gérald THOUAND, Ali ASSAF, Abdellah ARHALIASS, Jack LEGRAND, Anne THIERRY, Estelle MARTINEAU, Frédérique COURANT, Patrick GIRAUDEAU and Olivier GONÇALVES	
3.1. Introduction	157
3.2. Regulatory analyses for measuring the quality of the liquid whole egg are not sufficient to estimate their spoilage	163
3.2.1. Physico-chemical criteria	164
3.2.2. Microbiological criteria	167

3.2.3. Limitations of current analyses and the importance of finding complementary approaches	168
3.3. Vibrational spectroscopy allows the chemotyping of the main classes of the biomolecules present in the LE matrix	171
3.3.1. The benefits of vibrational techniques	171
3.3.2. Infrared spectroscopy (IR)	171
3.3.3. Raman spectroscopy	195
3.4. Nuclear Magnetic Resonance for the study of the quality of egg products	206
3.4.1. Introduction to Nuclear Magnetic Resonance	207
3.4.2. Relaxation in NMR Spectroscopy	214
3.4.3. High-field NMR spectroscopy	218
3.5. Mass spectrometry	223
3.5.1. Introduction	223
3.5.2. Gas chromatography coupled with mass spectrometry	226
3.5.3. Liquid chromatography coupled with mass spectrometry	237
3.5.4. Direct injection mass spectrometry	240
3.6. Conclusion	242
3.7. Bibliography	243
Chapter 4. The Potential of Online Analysis Systems for the Chemotyping of the Egg Matrix	259
Rémy COAT, Boris GOUILLEUX, Abdellah ARHALIASS, Jack LEGRAND, Gérald THOUAND, Estelle MARTINEAU, Ali ASSAF, Patrick GIRAUDEAU and Olivier GONÇALVES	
4.1. Introduction	259
4.2. New analytical systems within processes	260
4.2.1. Introduction	260
4.2.2. The NeSSI standard	261
4.3. Transient analytical technologies, so-called transportable or bench-top	269
4.3.1. Single-detection or mass spectrometry-based chromatographic analysis systems	269
4.3.2. Systems for obtaining chemical signatures using vibrational spectrometry	274

4.3.3. Systems for obtaining chemical signatures by magnetic resonance spectrometry (portable NMR). . .	277
4.4. Conclusion	281
4.5. Bibliography	282
Conclusion	285
List of Authors	287
Index	289
