Foreword	ix
Chapter 1. The Industrial System	1
1.1. Introduction.	1
1.2. The <i>RB</i> company’s “Hydraulic Cylinder Production” line.	2
1.2.1. The Overall Equipment Effectiveness – OEE	4
1.2.2. The Non-compliance rate	5
1.2.3. The Throughput time.	5
1.3. Characterization of the industrial system	6
1.3.1. General comments about systems theory	7
1.3.2. The role of the observer	12
1.3.3. Abstraction levels.	13
1.3.4. Structure of the industrial system	14
1.3.5. Behavior of the industrial system	17
1.3.6. To summarize these system characteristics.	23
1.4. A few words about information handling for the “Hydraulic Cylinder Production” line of the <i>RB</i> company	24
1.5. Objectives and systems theory.	26
1.6. Summary	29
Chapter 2. Industrial Objectives: The Variable	31
2.1. Introduction.	31
2.2. The objective and the variable: re-reading the tale of the chicken and the egg	34
2.3. Definition of the notion of a variable.	37
2.4. When a variable becomes a criterion	42

2.5. Industrial typology	47
2.5.1. Key success factors and key performance factors	49
2.5.2. Strategic, tactical and operational variables	50
2.5.3. Action variables and state variables	51
2.5.4. Customer satisfaction, productivity and context	53
2.6. Relationships between variables: industrial practice	54
2.6.1. Hierarchical approaches	54
2.6.2. Cognitive approaches	60
2.7. Semantic and choice of a variable: the power of an intention	62
2.8. Summary	68
Chapter 3. Industrial Objectives: The Value	71
3.1. Introduction	71
3.2. A value to define the objective	73
3.3. The value and the intention	78
3.3.1. The desire-objective	78
3.3.2. The requirement-objective	80
3.3.3. Inadequacy, improvement and desire	84
3.3.4. The value, the desire-objectives and the requirement-objectives	87
3.4. The value and the time	89
3.4.1. Achieving the objective, a question of time	89
3.4.2. Some characteristics of the temporal horizon	91
3.4.3. Summary	94
3.5. The observer's intention and the temporal horizon: converging perspectives	95
3.6. What is said about objectives	97
3.7. Summary	105
Chapter 4. Industrial Objectives: A Fuzzy Formalization to Move from Natural Language to Numbers	107
4.1. Introduction	107
4.2. The interest of using the theory of fuzzy subsets	109
4.3. When Mr. C.C. expresses himself about the Throughput time of the "Hydraulic Cylinder Production" line	113
4.4. Numbers and words	114
4.5. Graduality and fuzzy subsets	121
4.5.1. Membership function	121
4.5.2. Fuzzy meaning and description	124

4.6. Operations between fuzzy subsets	126
4.6.1. Fuzzy union, intersection and complement	126
4.6.2. Example of use of the operator of fuzzy union.	127
4.6.3. Example of use of the fuzzy intersection operator.	129
4.6.4. Triangular norms	132
4.6.5. Triangular conorms.	133
4.7. Imprecision of measurements and theory of possibilities	134
4.7.1. Generalities about measurement uncertainties	136
4.7.2. Confidence intervals and possibility distribution	138
4.7.3. Fuzzy descriptions of an imprecise measurement	141
4.8. Summary	144

Chapter 5. Industrial Objectives: Outlining Performance Expression 147

5.1. Introduction.	147
5.2. The notion of performance.	148
5.2.1. General comments	148
5.2.2. Industrial performance.	151
5.3. From performance to performance expression	155
5.3.1. General comments	155
5.3.2. Semantics of performance expression	157
5.4. The process of <i>precisiation</i> of the finality into objectives: model and notations.	159
5.4.1. Principle	160
5.4.2. From the finality to the goal variables.	162
5.4.3. From goal variables to objective variables	163
5.4.4. The process of <i>precisiation</i>	163
5.4.5. Objective attributes.	163
5.5. Computation of performance expression: our assumptions	169
5.6. Summary	171

Chapter 6. Industrial Objectives: Computation of Performance Expression of the Desire-Objective 173

6.1. Introduction.	173
6.2. Returning to the notion of the desire-objective	174
6.3. “Computation” of the performance expression of a desire-objective	176
6.4. The observer expresses their “feeling” directly.	178
6.5. The observer has a measurement value associated with the considered variable	179

6.6. The observer has a set of measurement values or of information associated with the considered variable	182
6.7. Looking back over computation.	187
6.8. Summary	189
Chapter 7. Industrial Objectives: Computation of the Performance Expression of the Requirement-Objective	191
7.1. Introduction.	191
7.2. Returning to the notion of a requirement-objective	192
7.3. A few points about the notion of scale	194
7.4. Computation of the performance expression for the improvement-objective	196
7.4.1. The observer computes a numerical performance expression	197
7.4.2. The observer computes a linguistic performance expression	204
7.4.3. Looking back over the computation	212
7.5. Computation of the performance expression of the inadequacy-objective	214
7.5.1. The observer computes a performance expression	215
7.5.2. The observer computes a performance expression and represents it visually	220
7.5.3. Looking over the computation	227
7.6. Summary	227
Conclusion	229
Bibliography	233
Index	249
