Introduction	ix
Table of Notations	xiii
Chapter 1. Equilibrium, Stationary Movement and Oscillation of a Free Solid	1
1.1. Expression of the fundamental principle of dynamics for a free solid	1
1.2. Canonical form of the fundamental principle	4
1.2.1. Dynamic resultant	5
1.2.2. Dynamic moment at O_s	5
1.2.3. Fundamental principle of dynamics	7
1.3. Equilibrium of the free solid	7
1.3.1. Equations of equilibrium	7
1.3.2. Stability of equilibrium	9
1.4. General equations of small movements of a free solid	9
1.4.1. Reminder of developments limited to the first order	9
1.4.2. Equations of small movements of the free solid	12
1.4.3. Analytical mechanics of free solids	43
1.5. Matrix expression of small movements of a free solid	59
1.5.1. Using vector representation	60
1.5.2. Using analytical mechanics	63
1.5.3. Relative situation of frames at the equilibrium	65
1.6. Stationary movement	67
1.6.1. Cyclic parameters	67
1.6.2. Characterizing a stationary movement	68

1.6.3. Conditions of realization of a stationary movement.	69
1.6.4. Neighboring motions and stability of a stationary movement.	71
1.6.5. Applications	74
Chapter 2. Solving Equations of Small Movements	75
2.1. Linear differential systems with constant coefficients	75
2.1.1. General periodic solution of the homogeneous system	77
2.1.2. Particular solution to the system	79
2.1.3. Exercise 1	81
2.2. Laplace transformation	87
2.2.1. Definition.	87
2.2.2. Linearity of a Laplace transformation	87
2.2.3. Laplace transforms for common functions	88
2.2.4. Functional properties of the Laplace transformation	91
2.2.5. Examples of use of the Laplace transform	93
2.2.6. Applications	96
Chapter 3. Oscillator Studies	115
3.1. Physical nature of oscillatory motion.	115
3.2. The single oscillator.	116
3.2.1. Definitions	117
3.2.2. Conditions of an oscillatory motion	117
3.2.3. Study of free oscillatory motion	118
3.2.4. Study of forced oscillations	123
3.2.5. Study of a modulated oscillatory signal	126
3.3. Motion of coupled oscillators	129
3.3.1. Coupling of two oscillators	129
3.3.2. Study of free oscillation	129
3.3.3. Applications: problem 6	138
3.4. Oscillatory device of k oscillators – equilibrium and stability	154
3.4.1. Approaching the problem	154
3.4.2. Routh criteria	155
Chapter 4. Gyroscopic Motion	163
4.1. Gyroscopic coupling	163
4.1.1. Composition of the device.	163
4.1.2. Velocity-distributing torsor	166
4.1.3. Kinetic energies of all three components	166
4.1.4. Equations of dynamics	167

4.1.5. Equations of analytical mechanics	168
4.1.6. Situations of equilibrium of the gyroscopic device.	172
4.1.7. Stability of the stationary movement	173
4.2. Gyroscopic pendulum	177
4.2.1. Composition of the device	177
4.2.2. Velocity-distributing torsors	178
4.2.3. Kinetic energies	179
4.2.4. Lagrange equations	179
4.2.5. Equilibrium and stability	181
4.3. The gyro-compass	184
4.3.1. Composition of the device	184
4.3.2. Fundamental principle of dynamics.	186
4.3.3. Equations of analytical mechanics	186
4.3.4. Stationary movement and stability	193
4.3.5. Note for establishing Lagrange equations	199
4.4. Applications: problem 7 – motion stabilizer	199
