Preface xiii

Chapter 1. The Emergence of the Principle of Virtual Velocities 1

1.1. In brief 1
1.2. Setting the principle as a cornerstone 1
1.3. The "simple machines" 2
1.4. Leonardo, Stevin, Galileo 5
1.5. Descartes and Bernoulli 9
1.5.1. René Descartes (1596–1650) 9
1.5.2. Johann Bernoulli (1667–1748). 11
1.6. Lagrange (1736–1813) 12
1.6.1. Lagrange's statement of the principle 12
1.6.2. Lagrange's proof of the principle 13
1.6.3. Lagrange's multipliers 15

Chapter 2. Dualization of Newton's Laws 19

2.1. In brief 19
2.2. Newton's statements. 19
2.2.1. First law 19
2.2.2. Second law 20
2.2.3. Third law 20
2.2.4. Material points 21
2.3. System of material points 21
2.3.1. System of material points 21
2.3.2. Subsystem 23
2.3.3. Law of mutual actions 24
2.3.4. Summing up… 25

2.4. Dualization and virtual work for a system of material points . . . 25
2.4.1. System comprising a single material point . . . 25
2.4.2. System comprising several material points . . . 26
2.4.3. Virtual velocity, virtual motion and virtual work . . . 29
2.4.4. Statement of the principle of virtual work (P.V.W.) . . . 31
2.4.5. Virtual motions in relation to the modeling of forces . . . 32
2.5. Virtual work method for a system of material points . . . 33
2.5.1. Presentation of the virtual work method . . . 33
2.5.2. Example of an application . . . 34
2.5.3. Comments . . . 40
2.6. Practicing . . . 41
2.6.1. Law of mutual actions . . . 41

Chapter 3. Principle and Method of Virtual Work . . . 43

3.1. Why and what for? . . . 43
3.2. General presentation of the virtual work method . . . 44
3.2.1. Geometrical modeling . . . 44
3.2.2. Virtual motions . . . 45
3.2.3. Virtual (rates of) work . . . 45
3.2.4. Principle of virtual (rates of) work . . . 46
3.2.5. Implementing the principle of virtual work . . . 48
3.2.6. Comments . . . 49
3.3. General results . . . 50
3.3.1. System, subsystems, actual and virtual motions . . . 50
3.3.2. Virtual (rates of) work in rigid body virtual motions . . . 50
3.3.3. Fundamental law of dynamics . . . 51
3.3.4. Wrench of internal forces . . . 51
3.3.5. Law of mutual actions . . . 52
3.3.6. Remarks . . . 52
3.4. Particular results . . . 53
3.4.1. System, subsystems, actual and virtual motions . . . 53
3.4.2. Momentum theorem . . . 54
3.4.3. Center of mass theorem . . . 55
3.4.4. Kinetic energy theorem . . . 57
3.4.5. Comments . . . 58
3.5. About equilibrium . . . 58
3.5.1. Equilibrium . . . 58
3.5.2. Self-equilibrating fields of internal forces . . . 60

Chapter 4. Geometrical Modeling of the Three-dimensional Continuum 61

4.1. The concept of a continuum 61
4.1.1. Geometrical modeling 61
4.1.2. Experiments 61
4.1.3. Comments 64
4.2. System and subsystems 64
4.2.1. Particles and system 64
4.2.2. Actual motions. Eulerian and Lagrangian descriptions 64
4.3. Continuity hypotheses 67
4.3.1. Lagrangian description 67
4.3.2. Eulerian description. 69
4.3.3. Conservation of mass. Equation of continuity 70
4.4. Validation of the model 70
4.4.1. Weakening of continuity hypotheses 70
4.4.2. Physical validation 73
4.5. Practicing 74
4.5.1. Homogeneous transformation 74
4.5.2. Simple shear 75
4.5.3. “Lagrangian” double shear 76
4.5.4. Rigid body motion 76

Chapter 5. Kinematics of the Three-dimensional Continuum 79

5.1. Kinematics 79
5.1.1. The issues 79
5.1.2. Material time derivative of a vector 79
5.1.3. Strain rate 81
5.1.4. Extension rate 82
5.1.5. Distortion rate 82
5.1.6. Principal axes of the strain rate tensor 83
5.1.7. Volume dilatation rate 84
5.1.8. Spin tensor 85
5.1.9. Rigid body motion 87
5.1.10. Geometrical compatibility of a strain rate field. 87
5.2. Convective derivatives 90
5.2.1. General comments 90
5.2.2. Convective derivative of a “point function” 91
5.2.3. Equation of continuity 91
5.2.4. Acceleration field 92

5.2.5. Convective derivative of a volume integral . . . 93
5.2.6. Euler's theorem . . . 95
5.2.7. Kinetic energy theorem . . . 97
5.3. Piecewise continuity and continuous differentiability . . . 98
5.3.1. Convective derivative of a volume integral . . . 98
5.3.2. Equation of continuity . . . 99
5.3.3. Momentum theorem . . . 101
5.3.4. Euler's theorem . . . 102
5.3.5. Kinetic energy theorem . . . 103
5.4. Comments . . . 104
5.5. Explicit formulas in standard coordinate systems . . . 104
5.5.1. Orthonormal Cartesian coordinates . . . 104
5.5.2. Cylindrical coordinates . . . 105
5.5.3. Spherical coordinates . . . 105
5.6. Practicing . . . 106
5.6.1. Rigid body motion . . . 106
5.6.2. Simple shear . . . 107
5.6.3. "Lagrangian" Double shear . . . 108
5.6.4. "Eulerian" Double shear . . . 109
5.6.5. Irrotational and isochoric motions . . . 109
5.6.6. Point vortex . . . 110
5.6.7. Fluid sink (or source) . . . 111
5.6.8. Geometrical compatibility of a thermal strain rate field . . . 112

Chapter 6. Classical Force Modeling for the Three-dimensional Continuum . . . 115

6.1. Virtual motions . . . 115
6.2. Virtual rates of work . . . 116
6.2.1. Virtual rate of work by quantities of acceleration . . . 116
6.2.2. Virtual rate of work by external forces for the system . . . 117
6.2.3. Virtual rate of work by external forces for subsystems . . . 118
6.2.4. Virtual rate of work by internal forces . . . 120
6.3. Implementation of the principle of virtual work . . . 120
6.3.1. Specifying the virtual rate of work by internal forces . . . 120
6.3.2. Equations of motion for the system . . . 122
6.3.3. Equations of motion for a subsystem . . . 124
6.3.4. The model . . . 125
6.3.5. Consistency . . . 127

6.4. Piecewise continuous and continuously differentiable fields . . . 127
6.4.1. The issues . . . 127
6.4.2. Piecewise continuous and continuously differentiable $\underline{U}(\underline{x},t)$ and $\underline{\underline{\sigma}}(\underline{x},t)$ . . . 128
6.4.3. Piecewise continuous and continuously differentiable virtual velocity fields . . . 131
6.5. The stress vector approach . . . 135
6.5.1. The stress vector . . . 135
6.5.2. The stress vector as the historical fundamental concept . . . 135
6.6. Local analysis . . . 141
6.6.1. Components of the stress vector and stress tensor . . . 141
6.6.2. Normal stress, shear or tangential stress . . . 142
6.6.3. Principal axes of the stress tensor. Principal stresses . . . 143
6.6.4. Isotropic Cauchy stress tensor . . . 145
6.7. The hydrostatic pressure force modeling . . . 145
6.8. Validation and implementation . . . 147
6.8.1. Relevance of the model. . . . 147
6.8.2. Implementation . . . 148
6.9. Explicit formulas for the equation of motion in standard coordinate systems . . . 149
6.9.1. Orthonormal Cartesian coordinates . . . 149
6.9.2. Cylindrical coordinates . . . 149
6.9.3. Spherical coordinates . . . 150
6.10. Practicing . . . 150
6.10.1. Spherical and deviatoric parts of the stress tensor . . . 150
6.10.2. Extremal values of the normal stress. . . . 151
6.10.3. Stress vector acting on the “octahedral” facet. . . . 152
6.10.4. Mohr circles . . . 153
6.10.5. Self-equilibrating stress fields . . . 155
6.10.6. Tresca’s strength condition . . . 157
6.10.7. Maximum resisting rate of work for Tresca’s strength condition . . . 158
6.10.8. Spherical shell . . . 161
6.10.9. Rotating circular ring . . . 163
6.10.10. Loading parameters, load vector . . . 165

Chapter 7. The Curvilinear One-dimensional Continuum . . . 169

7.1. The problem of one-dimensional modeling . . . 169
7.2. One-dimensional modeling without an oriented microstructure . . . 170
7.2.1. Geometrical modeling . . . 170
7.2.2. Kinematics: actual and virtual motions . . . 171
7.2.3. Virtual rate of work by quantities of acceleration . . . 172

7.2.4. Virtual rate of work by external forces for the system . . . 172
7.2.5. Virtual rate of work by external forces for subsystems . . . 173
7.2.6. Virtual rate of work by internal forces . . . 174
7.2.7. Implementation of the principle of virtual work . . . 175
7.2.8. Piecewise continuous fields . . . 178
7.2.9. Consistency and validation of the model . . . 180
7.2.10. An example . . . 183
7.3. One-dimensional model with an oriented microstructure . . . 187
7.3.1. Guiding ideas . . . 187
7.3.2. Geometrical modeling . . . 188
7.3.3. Kinematics: actual and virtual motions . . . 189
7.3.4. Virtual rate of work by quantities of acceleration . . . 190
7.3.5. Virtual rate of work by external forces for the system . . . 191
7.3.6. Virtual rate of work by external forces for subsystems . . . 193
7.3.7. Virtual rate of work by internal forces . . . 193
7.3.8. Implementation of the principle of virtual work . . . 194
7.3.9. Comments . . . 198
7.3.10. Piecewise continuous fields . . . 198
7.3.11. Integration of the field equations of motion . . . 201
7.4. Relevance of the model . . . 201
7.4.1. Physical interpretation . . . 201
7.4.2. Matching the one-dimensional model with the Cauchy stress model . . . 202
7.4.3. Terminology and notations . . . 206
7.5. The Navier–Bernoulli condition . . . 208
7.5.1. Virtual rate of angular distortion . . . 208
7.5.2. The Navier–Bernoulli condition . . . 209
7.5.3. Discontinuity equations . . . 210
7.5.4. Virtual rate of work by internal forces . . . 211
7.5.5. Comments . . . 211
7.6. Analysis of systems . . . 212
7.6.1. Static determinacy . . . 212
7.6.2. Systems made of one-dimensional members . . . 212

Chapter 8. Two-dimensional Modeling of Plates and Thin Slabs . . . 215

8.1. Modeling plates as two-dimensional continua . . . 215
8.1.1. Geometrical modeling . . . 215
8.1.2. Kinematics: actual and virtual motions . . . 216
8.2. Virtual rates of work . . . 221
8.2.1. Virtual rate of work by quantities of acceleration . . . 221
8.2.2. Virtual rate of work by external forces for the system . . . 221
8.2.3. Virtual rate of work by external forces for subsystems . . . 224

8.2.4. Virtual rate of work by internal forces 225
8.2.5. Tensorial wrench field of internal forces 226
8.3. Equations of motion 227
8.3.1. Statement of the principle of virtual work 227
8.3.2. Boundary equations 228
8.3.3. Specifying the tensorial wrench of internal forces 229
8.3.4. Field equations of motion 230
8.3.5. Field equations of motion in terms of reduced elements 231
8.3.6. Entailment of the equations of motion 232
8.4. Physical interpretation and classical presentation 235
8.4.1. Internal forces 235
8.4.2. Field equations of motion 236
8.4.3. Boundary equations 240
8.5. Piecewise continuous fields 241
8.5.1. Piecewise continuous field of internal forces 241
8.5.2. Piecewise continuous virtual motions 242
8.6. Matching the model with the three-dimensional continuum 244
8.6.1. The matching procedure 244
8.6.2. Three-dimensional virtual velocity field 245
8.6.3. Virtual rate of work by quantities of acceleration 246
8.6.4. Virtual rate of work by external forces 247
8.6.5. Virtual rate of work by internal forces 247
8.6.6. Identifying the reduced elements of the internal force wrench field 248
8.7. The Kirchhoff–Love condition 250
8.7.1. Virtual rate of angular distortion: Kirchhoff–Love condition 250
8.7.2. Discontinuity equations 251
8.7.3. Virtual rate of work by internal forces 252
8.8. An illustrative example: circular plate under a distributed load 253
8.8.1. Load carrying capacity 253
8.8.2. Resistance of the two-dimensional plate element 257
8.8.3. An equilibrated internal force wrench distribution 259

Appendix 1. Introduction to Tensor Calculus 261

Appendix 2. Differential Operators 287

Appendix 3. Distributors and Wrenches 309
