Introduction	xiii
Chapter 1. The First Information Theories	1
1.1. Introduction	1
1.2. The mathematical theory of information by Shannon	3
1.2.1. Beginnings of this theory	3
1.2.2. Shannon's generalization	5
1.2.3. Information and entropy	6
1.3. Kolmogorov's algorithmic theory of information	7
1.3.1. Succinct presentation	7
1.3.2. First algorithmic information theory	8
1.3.3. Second algorithmic information theory	9
1.4. Delahaye's further developments	10
1.4.1. Gaps	10
1.4.2. Information value	10
1.4.3. Raw information content	11
1.4.4. Pragmatic aspects related to information value	12
1.5. Final remarks	13
Chapter 2. Understanding Shannon through Play	15
2.1. Introduction	15
2.2. The game of tele-balls	16
2.2.1. Layout and rules of the game	16

2.2.2. Producing the source event	17
2.2.3. Channel and transmission	17
2.2.4. Transmission.	18
2.2.5. End of the process	19
2.3. The teachings of the tele-ball game.	19
2.3.1. The concept of “tele”	20
2.3.2. The technical grounding	20
2.3.3. The system’s language	21
2.3.4. Synchronization and the clock	21
2.3.5. Introduction to noise	22
2.4. The general diagram of communication/transmission	22
2.4.1. Schematic diagram of a general communication system according to Shannon.	23
2.4.2. Extension to information beyond the game of tele-balls	24
2.4.3. Sense and nonsense.	25
2.4.4. Electronic media designers at work	27
2.5. Conceptual confusion in the so-called information theories	29
2.5.1. Terminological shift	29
2.5.2. Weaver’s levels of information.	29
2.5.3. Measuring information: the CONTAINER	30
2.5.4. Inaccuracies and easy approximations between content and container	31
2.5.5. Opening to other perspectives	31
2.6. Conclusion	32
Chapter 3. “Tele” before Shannon.	35
3.1. Introduction.	35
3.2. The speaking African drums	35
3.2.1. The speaking drums	36
3.2.2. The tone as bit.	36
3.2.3. Redundancy	37
3.3. The problems of long-distance communication.	38
3.3.1. The ancient solutions.	38
3.3.2. The telegraph	39
3.3.3. The Morse system.	42
3.3.4. Alpha bravo code	44
3.4. Conclusion	45

Chapter 4. Some Revisions of the Concept of Information	47
4.1. Introduction	47
4.2. A double-faced concept: Capurro and Hjørland	48
4.2.1. Towards an operational concept	49
4.2.2. An etymological exploration	49
4.2.3. Oppositions and relations, taxonomy and complexity	51
4.2.4. Going on... between measurable signal and signifying emergence	52
4.3. The Mathematical Theory of Information (MTI) as a starting point: Segal	52
4.3.1. Mathematics rejoining the Human Sciences?	53
4.3.2. A measure for meaningless information	53
4.3.3. A unifying project that bumped into semantics	55
4.3.4. The incursion of information in the Human Sciences	56
4.3.5. Beyond the MTI	58
4.4. The Diaphoric Definition of Data (DDD): Floridi	59
4.4.1. Information, data, meaning	59
4.4.2. A definition of information based on data	61
4.4.3. Diaphoric Definition of Data in three levels	62
4.4.4. Diaphorae and saliencies	63
4.4.5. Data as a relational entity	64
4.4.6. Beyond the DDD	67
4.5. A pattern-oriented approach (POA): Bates	68
4.5.1. A definition of information based on patterns	69
4.5.2. Discussion	70
4.5.3. Final considerations, with the aim of approaching diverse viewpoints	73
4.6. Founding statements for a theory of information	75
4.6.1. Information and meaning	75
4.6.2. Notion of data	76
4.6.3. Notion of signal	76
4.6.4. Notion of information	77
4.6.5. Notion of sense	78
4.6.6. Notion of message	79
4.6.7. Before concluding	80
4.7. Conclusion	81

Chapter 5. Conceptualization and Representations	83
5.1. Introduction	83
5.2. Natural and artifactual devices for producing representations	84
5.2.1. Meaning? Data processing, representation and information!	84
5.2.2. Hierarchization of representational capabilities	86
5.2.3. Computerized artifacts modeling natural devices	91
5.3. Human conceptualization	94
5.3.1. The relativity of the object.	94
5.3.2. The relativity of appearance qualifiers	95
5.3.3. A rigorous formalization of human conceptualization	100
5.4. About what “exists” in common thought, in natural language and in formal language.	101
5.4.1. Concepts: the chair, the table and the beginning.	101
5.4.2. Conceptual <i>trompe-l’œil</i>	102
5.4.3. Sensory perception and object genesis	104
5.4.4. Kantian philosophy, the “real” and “knowledge”	108
5.5. The resulting epistemological revolutions	110
5.5.1. Not data, but constructions about the world	111
5.5.2. A relevance horizon-oriented framework	111
5.5.3. The end of truth and objectivity	112
5.6. Conclusion	113
Chapter 6. From Captures to Data	115
6.1. Introduction	115
6.2. An illustrative sketch: a view of the human body	116
6.2.1. The “human specimen” horizon of relevance, defined by its visible forms	116
6.2.2. The “patient” horizon of relevance, defined by its symptoms.	117
6.2.3. The “pathology” horizon of relevance, defined by a specialized examination	117
6.2.4. The “clinical case” horizon of relevance, defined by a debate about the case.	118

6.2.5. The horizon of Information and Communication Sciences.	119
6.2.6. The radical relativity of the “viewpoint”	119
6.3. From the interactional bath to distinction.	120
6.3.1. Postulates	120
6.3.2. The supremacy of subjectivity	121
6.3.3. First phase: cut-out in the tissue of indistinct interactions	122
6.3.4. Second phase: generation of an object-entity	123
6.4. Diaphoric data and qualification?	124
6.4.1. Description at the heart of the problem.	124
6.4.2. A reminder of the diaphoric approach	126
6.4.3. Zero degree: a-conceptual captures	127
6.4.4. From a-conceptual captures to the factory of views	128
6.4.5. Back to the qualifying phase of the object-entity	129
6.5. Conclusion.	131
Chapter 7. From Data to Aggregates	133
7.1. Introduction	133
7.2. Data: raw material of the semantic chain	134
7.2.1. Batesonian perspective	134
7.2.2. Informational raw material	135
7.2.3. Third phase: qualification of the object-entity	135
7.2.4. Rigorous formalization of the qualification of an object-entity	137
7.2.5. From <i>capta</i> to data.	138
7.2.6. An example: the map and the territory	139
7.3. Aggregates: meaningful superstructures	140
7.3.1. Back to patterns: essential data or mental constructions?	141
7.3.2. Back to Gestalt theory.	142
7.3.3. Aggregates for scaffolding a point of view	143
7.3.4. Aggregate operations: a basic example.	144
7.3.5. Coalescence as the foundation for interpretive scaffolding	147
7.3.6. Conceptual integration	149
7.3.7. Pareidolia for illustrating interpretive scaffolding by coalescence.	152
7.3.8. In the end	155

7.4. Meaning: individual production or social construct?	158
7.4.1. A subjective, situational and pragmatic conception	158
7.4.2. A laying-out of incommunicable individual experience	159
7.4.3. Negotiated and shareable meaning.	160
7.4.4. Public procedures for legalizing knowledge	161
7.4.5. The horizon of relevance underlying conceptualization	162
7.5. Conclusion	163
Chapter 8. Trace Deployment from Indexical Retention to Writing	165
8.1. Introduction.	165
8.2. The trace as registered indexical retention.	168
8.2.1. <i>Spectrum</i> : the trace as past retention.	168
8.2.2. The <i>Res</i> : inscription in a physical mode of existence.	171
8.2.3. Wrapping up.	175
8.3. The search of the trace as evidence or proof.	175
8.3.1. The <i>Studium</i> : the search for meaning in context.	176
8.3.2. The <i>Documentum</i> : instruction of the “trace process”	180
8.3.3. Summarizing.	185
8.4. The trace as writing	186
8.4.1. The <i>Punctum</i> : writing beyond evidence.	186
8.4.2. Some complementary comments before concluding.	189
8.5. Conclusion	191
Chapter 9. Interpretive Scaffoldings in Context	195
9.1. Introduction.	195
9.2. Information and trace	195
9.2.1. Specter of a real process that took place	195
9.2.2. Retention registered on a medium	197
9.2.3. Qualified by a coherent and credible aggregate	197
9.2.4. Authenticated by tracking.	198
9.2.5. Traces without information, information without traces?	201

9.3. The horizon of expectation, by Hans Robert Jaus	202
9.3.1. For a reception-centered approach	202
9.3.2. Introduction to the notion of horizon of expectation	203
9.3.3. A generalized cognitive translation of the horizon of expectation	203
9.4. Relevance, according to Dan Sperber and Deirdre Wilson	204
9.4.1. Communication and information according to Sperber and Wilson	205
9.4.2. Taking the context into account	206
9.4.3. The principle of relevance	208
9.5. Weaving the horizon of expectation and the theory of relevance	209
9.5.1. Extractions and generalizations	209
9.5.2. Being bound to a horizon of relevance	210
9.6. Coalescence considered under the light of a horizon of relevance	211
9.6.1. An ordinary example from everyday life	212
9.7. Interpretive aggregate by means of example: visual sense-making	214
9.7.1. Visual captures	215
9.7.2. Aggregate emergence	216
9.7.3. The horizon of relevance, a framework for interpretation	217
9.7.4. Conclusion	223
Chapter 10. Realities under the Watch of Horizons of Relevance	225
10.1. Introduction	225
10.2. Back to the relation to the Real	226
10.2.1. Truth is a fiction	226
10.2.2. Substituting reality for truth	227
10.2.3. Circumscribing the real versus qualifying the real	227
10.2.4. Interpretive scaffoldings	228

10.3. Some examples	230
10.3.1. A sculpture by Camille Claudel	230
10.3.2. A vegetable	231
10.3.3. Cultural modulations of meaning	232
10.3.4. The seeds of discord	233
10.3.5. The windows and their points of view	233
10.3.6. Final considerations	235
10.4. Conclusion: legalization of meaning in the age of Digital Humanities	235
Conclusion	237
Bibliography	241
Index	253
