<b>Preface</b> . . . . .	xv
Sivasankari SUNDARAM	
<b>Chapter 1. A Stochastic Framework for Enhancing Smart Grid Reliability under Solar Generation Uncertainty in Keeping with Emission Standards</b> . . . . .	1
Suriya PONNAMBALAM and Ilampoornan M.K.	
1.1. Introduction. . . . .	1
1.2. Literature review. . . . .	3
1.3. Problem formulation . . . . .	11
1.3.1. Objective function . . . . .	12
1.3.2. Optimization of objective function. . . . .	13
1.3.3. Optimization method for reliability indicator evaluation. . . . .	14
1.3.4. Mathematical modeling of smart grid components . . . . .	15
1.4. Uncertainty in solar power generation . . . . .	16
1.5. Real-time monitoring in SGs . . . . .	17
1.5.1. Energy generation and solar power tracking . . . . .	17
1.5.2. Energy storage systems . . . . .	17
1.5.3. Grid stability and power flow. . . . .	18
1.5.4. Load management and demand response . . . . .	18
1.5.5. Fault detection and predictive maintenance . . . . .	18
1.5.6. Data-driven decision-making and dynamic grid management. . . . .	18
1.5.7. Communication and integration of distributed systems . . . . .	19
1.5.8. Challenges in real-time monitoring . . . . .	19
1.5.9. Benefits of real-time monitoring . . . . .	19

1.6. Optimization of electricity flow in SGs . . . . .	20
1.6.1. Advanced optimization techniques . . . . .	20
1.6.2. Energy storage and demand response . . . . .	21
1.6.3. Power electronics and smart devices . . . . .	21
1.6.4. Communication technologies and IoT integration. . . . .	21
1.6.5. Energy management systems (EMS) . . . . .	21
1.6.6. Benefits and strategic importance . . . . .	22
1.7. Conclusion . . . . .	22
1.8. Policy implications . . . . .	22
1.9. Future directions. . . . .	23
1.10. References. . . . .	24

## **Chapter 2. A Hybrid Machine Learning Approach to Assessing the Comprehensive Health of Batteries in Electric Vehicles. . . . .**

Venkatesh MURUGAN, Satish Kumar RAMOJI,  
Venkata Pavan Kumar ARAPIRALA, Lalit Chandra SAIKIA  
and Biswanath DEKARAJA

2.1. Introduction. . . . .	28
2.2. Literature review. . . . .	29
2.2.1. Research gap. . . . .	31
2.2.2. Novelty. . . . .	31
2.3. System design . . . . .	32
2.3.1. Voltage modeling . . . . .	33
2.3.2. Current and temperature modeling. . . . .	33
2.3.3. SOC calculation. . . . .	33
2.3.4. SOH estimation . . . . .	34
2.3.5. RUL calculation. . . . .	34
2.3.6. Fault labeling . . . . .	34
2.3.7. Feature engineering. . . . .	34
2.4. Model development . . . . .	35
2.4.1. RUL prediction using XG Boost . . . . .	36
2.4.2. Fault detection using hybrid stacked ensemble . . . . .	36
2.4.3. LS boost for SOC prediction . . . . .	36
2.4.4. XG boost for SOH prediction. . . . .	37
2.4.5. Fault detection using hybrid model . . . . .	37
2.5. Model evaluation and constraints . . . . .	38
2.5.1. Root mean square error . . . . .	38
2.5.2. Fault detection accuracy. . . . .	39
2.5.3. Algorithms and flowchart . . . . .	39
2.6. Data generation and preprocessing . . . . .	41
2.6.1. Data partitioning . . . . .	41

2.6.2. Data balancing for fault detection . . . . .	41
2.7. Model training . . . . .	41
2.7.1. Model validation . . . . .	42
2.8. Results and discussion . . . . .	42
2.8.1. SOC prediction analysis . . . . .	43
2.8.2. SOH prediction performance . . . . .	44
2.8.3. RUL estimation . . . . .	44
2.8.4. Fault detection performance . . . . .	45
2.8.5. SOC prediction error distribution . . . . .	46
2.8.6. SOH prediction error analysis . . . . .	47
2.8.7. RUL prediction error analysis . . . . .	48
2.8.8. Comparative analysis . . . . .	48
2.8.9. SOC prediction comparison . . . . .	49
2.8.10. SOH prediction comparison . . . . .	49
2.8.11. Fault detection accuracy comparison among classifiers . . . . .	50
2.9. Conclusion . . . . .	51
2.10. References. . . . .	52

**Chapter 3. Operation and Control of an Autonomous Hybrid Generation System Based on Wind, Solar, Biogas and Battery Bank. . . . .** 55

Nindra SEKHAR, Kumaresan N, Venkatesh BODDAPATI,  
Ravulakari KALYAN, Venkata Madhavaram T and Nethravathi S

3.1. Introduction. . . . .	56
3.2. Autonomous hybrid renewable generation system. . . . .	59
3.2.1. Wind energy system . . . . .	60
3.2.2. Diode-based PV cell model . . . . .	62
3.2.3. Battery model . . . . .	63
3.2.4. Biogas energy . . . . .	64
3.3. Comprehensive operation of the proposed AHRGS . . . . .	65
3.4. AHRGS control strategy . . . . .	67
3.4.1. VFCL control strategy . . . . .	67
3.4.2. Single sensor solar PV-MPPT method . . . . .	69
3.5. Simulation results for the proposed hybrid system. . . . .	70
3.5.1. SCIG speed variation. . . . .	71
3.5.2. Speed variation in DFIG. . . . .	77
3.5.3. Load variation . . . . .	78
3.5.4. Wind, PV and biogas generators supply an isolated load, with real and reactive power support from the DSTATCOM for the load, and additional reactive power from the three-phase capacitor bank. . . . .	80

3.6. Experimental outcomes of the proposed hybrid system . . . . .	84
3.6.1. Experimentation utilizing solar PV panels . . . . .	84
3.6.2. Experimentation utilizing solar PV panels and DFIG system . . . . .	86
3.6.3. Integrated operation of solar, wind and biogas sources. . . . .	87
3.7. Conclusion . . . . .	93
3.8. Acknowledgments . . . . .	94
3.9. References . . . . .	94

**Chapter 4. Techno-Economic Analysis of a Hybrid Renewable Energy System with Solar PV, Wind and Biomass for Off-Grid Communities: A HOMER-Based Case Study in Aalborg, Denmark . . . . .**

97

Venkatesh BODDAPATI, Nethravathi S, Prakash D.B., Nindra SEKHAR and Arul Daniel S.

4.1. Introduction. . . . .	98
4.2. Proposed system architecture . . . . .	99
4.3. System modeling . . . . .	99
4.3.1. PV array output power. . . . .	100
4.3.2. Wind turbine output power . . . . .	101
4.3.3. Battery modeling . . . . .	101
4.3.4. Power inverter. . . . .	101
4.3.5. Biomass gasifier . . . . .	102
4.4. Economic analyses . . . . .	102
4.4.1. LCOE. . . . .	103
4.4.2. NPC . . . . .	103
4.4.3. Capacity factor . . . . .	103
4.4.4. Resources estimation. . . . .	103
4.5. Results and discussion . . . . .	105
4.5.1. Different hybrid energy system configurations . . . . .	108
4.5.2. Case-1: PV/biomass/wind/battery are active . . . . .	109
4.5.3. Case 2: when solar PV/biomass/batteries are active . . . . .	112
4.5.4. Case 3: when biomass alone is active . . . . .	115
4.5.5. Case 4: when biomass and wind generators are active . . . . .	117
4.5.6. Case 5: when solar PV, DG and wind generators are active. . . . .	119
4.5.7. Case 6: when the diesel generator and the wind generators are active. . . . .	122
4.5.8. Case 7: when solar PV and DG are active . . . . .	124
4.5.9. Case 8: when a diesel generator alone supplies the load demand. . . . .	127
4.6. Comparison of different case studies and their economic analysis . . . . .	129
4.7. Summary . . . . .	130

4.8. Conclusion . . . . .	130
4.9. References . . . . .	130

## **Chapter 5. Impact of Field Degradation Rates on the Levelized Cost of Energy (LCOE) for Solar PV Systems . . . . . 133**

Almas and Sivasankari SUNDARAM

5.1. Introduction. . . . .	134
5.1.1. Global and Indian solar transition . . . . .	134
5.1.2. The rise and challenges of rooftop PV . . . . .	134
5.1.3. Need for realistic performance assessment. . . . .	135
5.1.4. PV degradation: mechanisms and impact. . . . .	135
5.1.5. Role and limitations of LCOE . . . . .	135
5.1.6. Gap in literature and industry practice . . . . .	136
5.1.7. Scope and structure of the chapter . . . . .	136
5.2. Literature on PV degradation and LCOE computation techniques . . . . .	137
5.2.1. PV degradation: mechanisms and field observations . . . . .	137
5.2.2. Approaches to degradation estimation . . . . .	137
5.2.3. LCOE modeling and its limitations . . . . .	138
5.2.4. Research gap and motivation . . . . .	138
5.2.5. Objectives of the study. . . . .	139
5.3. Experimental setup and data acquisition framework. . . . .	139
5.3.1. Description of the PV system. . . . .	140
5.3.2. Module selection and visual diagnostics . . . . .	141
5.3.3. Instrumentation and measurement protocol . . . . .	141
5.3.4. Data acquisition duration and parameters logged . . . . .	142
5.3.5. Data preprocessing . . . . .	142
5.3.6. Development of $R_d$ model. . . . .	143
5.4. LCOE formulation and integration of field-derived $R_d$ . . . . .	143
5.4.1. LCOE formulation . . . . .	144
5.4.2. Financial assumptions . . . . .	144
5.4.3. Comparative evaluation . . . . .	145
5.4.4. Insights from field-based $R_d$ integration . . . . .	145
5.5. Results and discussion . . . . .	146
5.5.1. Impact of degradation rate on economic indicators . . . . .	146
5.5.2. Benchmarking with simulation tools . . . . .	146
5.5.3. Implications for PV financial planning . . . . .	147
5.6. Conclusion and future scope. . . . .	147
5.7. Future scope . . . . .	147
5.8. References . . . . .	148

<b>Chapter 6. Harnessing the Future: The Critical Role of Energy System Models in Shaping Sustainable and Resilient Global Energy Landscapes</b> . . . . .	151
Venkatesh R and Subramani K	
6.1. Introduction. . . . .	152
6.1.1. Overview of global energy challenges . . . . .	154
6.1.2. The role of energy system models in shaping the future . . . . .	155
6.1.3. Objectives and structure of the chapter . . . . .	157
6.2. Energy system models: key concepts and types . . . . .	158
6.2.1. Definition and scope of energy system models . . . . .	158
6.2.2. Bottom-up models: features and applications . . . . .	159
6.2.3. Top-down models: features and applications. . . . .	160
6.2.4. Hybrid models: a combined approach. . . . .	161
6.2.5. Model selection criteria and best practices . . . . .	162
6.2.6. Comparison of existing energy system models . . . . .	163
6.2.7. Limitations of existing energy system models and scope for development . . . . .	165
6.3. The role of energy system models in sustainable energy transitions . . . . .	167
6.3.1. Promoting renewable energy integration . . . . .	167
6.3.2. Enhancing energy efficiency . . . . .	167
6.3.3. Ensuring security of energy supply . . . . .	168
6.3.4. Addressing environmental and geopolitical pressures . . . . .	169
6.4. Predicting future energy scenarios . . . . .	171
6.4.1. Projections of renewable energy growth . . . . .	171
6.4.2. Impact of technological breakthroughs on energy systems . . . . .	171
6.4.3. Economic trends and their influence on energy models . . . . .	172
6.5. Energy system models and policy making. . . . .	172
6.5.1. Supporting policy decisions for energy transition . . . . .	172
6.5.2. Evaluating the effectiveness of policy measures. . . . .	173
6.5.3. Energy models in long-term planning and scenario analysis . . . . .	173
6.6. Impact of energy system models on greenhouse gas emissions and climate goals . . . . .	174
6.6.1. Modeling the path to net-zero emissions . . . . .	174
6.6.2. Role in achieving global climate objectives . . . . .	176
6.6.3. Case studies and success stories . . . . .	176
6.7. Energy system models and global energy resilience. . . . .	178
6.7.1. Strategies for energy resilience in a changing world . . . . .	178
6.7.2. The role of energy models in crisis management . . . . .	179
6.7.3. Building robust energy systems for future generations . . . . .	180

6.8. Conclusion . . . . .	180
6.8.1. Summary of key findings . . . . .	180
6.8.2. The future of energy system modeling . . . . .	181
6.8.3. Policy recommendations and next steps . . . . .	182
6.9. References . . . . .	183

## **Chapter 7. Application of Digital Technologies in Renewable Energy Systems . . . . . 187**

Manimegalai S. and Binu Ben Jose D.R.

7.1. Introduction. . . . .	188
7.1.1. Key contributions of digitalization. . . . .	188
7.1.2. Objective. . . . .	190
7.2. Overview of RESs. . . . .	191
7.2.1. Solar PV systems . . . . .	192
7.2.2. Wind energy systems. . . . .	192
7.2.3. Hydro-electric power systems . . . . .	193
7.2.4. Biomass and biogas systems . . . . .	194
7.2.5. Hybrid and microgrid systems . . . . .	194
7.3. Core digital technologies. . . . .	196
7.3.1. Hybrid and microgrid systems: enabling two-way energy and data flow . . . . .	196
7.3.2. IoT and sensor networks: real-time monitoring of renewable assets . . . . .	197
7.3.3. AI and ML: forecasting, optimization and predictive analytics . . . . .	198
7.3.4. Digital twins: simulation and virtual modeling of physical systems . . . . .	199
7.3.5. Blockchain: peer-to-peer energy trading and smart contracts . . . . .	200
7.3.6. SCADA and remote monitoring systems: supervisory control and automation . . . . .	200
7.3.7. Cloud and edge computing: distributed intelligence for energy applications. . . . .	201
7.4. Applications across renewable sources . . . . .	202
7.4.1. Application in solar energy . . . . .	202
7.4.2. Application in wind energy . . . . .	205
7.4.3. Application in hydro-electric energy . . . . .	207
7.4.4. Application in biomass/biogas . . . . .	208
7.4.5. Application in hybrid and microgrid systems . . . . .	209

7.5. Predictive maintenance and asset management. . . . .	212
7.5.1. Role of AI and ML in anomaly detection. . . . .	212
7.5.2. Preventing failures and extending component life. . . . .	214
7.5.3. Case studies across solar and wind farms. . . . .	214
7.6. Data-driven decision-making . . . . .	217
7.7. Case studies. . . . .	217
7.7.1. Enel’s digital wind farms . . . . .	217
7.7.2. Google DeepMind in wind optimization . . . . .	218
7.7.3. India’s national solar mission SCADA integration . . . . .	218
7.7.4. Blockchain pilots in Germany and Australia for peer energy trading. . . . .	218
7.8. Challenges and considerations. . . . .	218
7.8.1. Cost of digitalization . . . . .	219
7.8.2. Model development and deployment challenges . . . . .	219
7.8.3. Cybersecurity and data privacy. . . . .	220
7.8.4. Interoperability and standardization . . . . .	220
7.8.5. Human capital and skill gaps . . . . .	220
7.9. Future directions. . . . .	220
7.9.1. Emerging digital trends . . . . .	221
7.9.2. Opportunities for research. . . . .	221
7.10. Conclusions. . . . .	222
7.11. References. . . . .	223

**Chapter 8. Enhancing UAV Performance in Energy Applications through Advanced Algorithms and Hardware . . . . . 227**

Pranitha KARTHIKEYAN and Sivathanu Pillai A

8.1. Introduction. . . . .	227
8.2. Important domain for applications . . . . .	228
8.2.1. Trends in technology. . . . .	228
8.2.2. Opportunities for market growth . . . . .	228
8.2.3. Future prospects. . . . .	229
8.3. Literature synthesis . . . . .	229
8.4. Objectives. . . . .	230
8.5. Line edge cutting method . . . . .	230
8.5.1. Edge pixel detection condition . . . . .	231
8.5.2. Research outcomes for line edge cutting method . . . . .	231
8.6. Lucas–Kanade method . . . . .	232
8.6.1. Research outcomes for the Lucas–Kanade method . . . . .	234
8.7. Contour approximation and mask edge method . . . . .	234
8.7.1. Research outcomes for the contour approximation and mask edge method . . . . .	236

8.8. Proposed improved contour and mapping method . . . . .	236
8.8.1. Calculating the gradient for edge detection. . . . .	237
8.8.2. Calculating the centroid points . . . . .	237
8.8.3. Calculating the weights in a frame to determine the moving object. . . . .	238
8.8.4. Research outcomes for the improved contour and mapping method . . . . .	238
8.9. Implementation design steps. . . . .	239
8.9.1. Requirement analysis and specification. . . . .	239
8.9.2. Implementation methodology. . . . .	241
8.10. Conclusion . . . . .	242
8.11. Appendix . . . . .	242
8.11.1. Code for the improved contour and mapping method. . . . .	242
8.12. References. . . . .	244
<b>Chapter 9. The Role of Green Hydrogen in a Sustainable Energy Future: A Technoeconomic Review . . . . .</b>	<b>247</b>
Arunkumar N, Arun J and Balasabarinathan K.V.	
9.1. Introduction. . . . .	248
9.2. Outline of green hydrogen energy systems . . . . .	249
9.2.1. Production of green electricity . . . . .	250
9.2.2. Production of green hydrogen . . . . .	251
9.2.3. Storage and utilization of green hydrogen . . . . .	253
9.3. Integrated modeling, experimental investigations and applied projects aimed at advancing green hydrogen energy solutions . . . . .	256
9.3.1. Sunlight-driven energy systems . . . . .	259
9.4. A thorough review and exploration of future opportunities for GHESs . . . . .	262
9.5. Conclusion . . . . .	264
9.6. References . . . . .	265
<b>List of Authors . . . . .</b>	<b>269</b>
<b>Index . . . . .</b>	<b>273</b>
