<b>Introduction</b> . . . . .	ix
<b>Chapter 1. Urban Wastewater Composition</b> . . . . .	1
1.1. Main physicochemical parameters of raw wastewater . . . . .	1
1.1.1. Suspended solids . . . . .	3
1.1.2. Organic matter indicators . . . . .	5
1.1.3. Nitrogen . . . . .	15
1.1.4. Phosphorus . . . . .	19
1.1.5. Micropollutants . . . . .	20
1.1.6. Parametric influence in the treatment system. . . . .	24
1.2. Microbiological parameters: pathogenic organisms and indicators of fecal contamination . . . . .	25
1.2.1. Bacteria . . . . .	29
1.2.2. Enteric viruses. . . . .	31
1.2.3. Enteric protozoa. . . . .	32
1.2.4. Helminth eggs. . . . .	32
1.2.5. Fecal contamination indicators: assessment in treated wastewater . . . . .	34
1.3. References . . . . .	38
<b>Chapter 2. Processing Unit Operations</b> . . . . .	43
2.1. Background. . . . .	43
2.2. Design principles for treatment plants . . . . .	45
2.3. Unit operations. . . . .	48
2.3.1. Pretreatment. . . . .	51
2.3.2. Primary treatment. . . . .	52
2.3.3. Secondary treatment . . . . .	52
2.3.4. Effluent clarification and discharge . . . . .	54

---

2.3.5. Additional treatments . . . . .	54
2.3.6. Sludge treatment . . . . .	58
2.4. References . . . . .	62
<b>Chapter 3. Estimation of Pollutant Loadings.</b> . . . . .	<b>65</b>
3.1. Water consumption . . . . .	65
3.2. Estimated discharges . . . . .	66
3.2.1. Wastewater flows . . . . .	67
3.2.2. Peak flows . . . . .	68
3.2.3. Number of population equivalents (PE). . . . .	69
3.2.4. Maximum and minimum flow rates . . . . .	71
3.3. Pollutant loads . . . . .	74
3.3.1. Relationship between load and concentration . . . . .	74
3.3.2. Pollutant loads in BOD, N and P . . . . .	75
3.4. References . . . . .	76
<b>Chapter 4. Pretreatments</b> . . . . .	<b>79</b>
4.1. Screening . . . . .	79
4.1.1. Manual screens . . . . .	80
4.1.2. Mechanical screens . . . . .	81
4.1.3. Screen calculation. . . . .	83
4.1.4. Screen implementation . . . . .	89
4.2. Comminution. . . . .	89
4.3. Sieving . . . . .	90
4.3.1. Pressure washing sieves . . . . .	90
4.3.2. Mechanical waste discharge sieves . . . . .	90
4.4. Sand removal. . . . .	91
4.4.1. Calculation for aerated sand trap . . . . .	100
4.5. Oil and grease removal . . . . .	100
4.5.1. Grease separators . . . . .	101
4.5.2. Aerated grease and oil trap. . . . .	101
4.6. References . . . . .	105
<b>Chapter 5. Primary Settling</b> . . . . .	<b>107</b>
5.1. General principles . . . . .	107
5.2. Conical or cylindrical–conical static settler . . . . .	109
5.3. Horizontal flow settler. . . . .	110
5.3.1. Dimensioning of horizontal settlers . . . . .	111
5.4. Circular settlers . . . . .	117
5.4.1. Example design of a primary settler. . . . .	120
5.5. Design of primary mechanized settlers . . . . .	123
5.5.1. Rectangular settler . . . . .	123

---

5.5.2. Circular settler. . . . .	124
5.6. Performance of conventional primary settlers. . . . .	125
5.6.1. Settler depth. . . . .	128
5.7. Lamellar settlers. . . . .	129
5.7.1. Theory and general principles. . . . .	130
5.7.2. Dimensioning basics for lamellar settlers. . . . .	133
5.8. References. . . . .	174
<b>Chapter 6. Biological Treatment with Activated Sludge. . . . .</b>	<b>179</b>
6.1. Background information on microbial organisms. . . . .	179
6.2. Operating principle. . . . .	181
6.3. Theoretical bases of aerobic treatment. . . . .	182
6.3.1. Organic matter (biological oxygen demand) evolution in the presence of bacterial mass. . . . .	182
6.3.2. Analytical interpretation. . . . .	184
6.4. Traditional design methods. . . . .	192
6.4.1. Complete mix. . . . .	194
6.4.2. Plug flow. . . . .	211
6.4.3. Comparison between the two systems. . . . .	213
6.4.4. Oxygen requirements for carbon pollution. . . . .	213
6.5. Operating parameters. . . . .	221
6.5.1. Sludge losses: causes and consequences. . . . .	221
6.5.2. Role of nutrients. . . . .	223
6.5.3. MI. . . . .	223
6.5.4. DI. . . . .	224
6.5.5. Sludge redox potential (Rh). . . . .	224
6.5.6. Effect of temperature. . . . .	225
6.5.7. Effect of pH. . . . .	226
6.5.8. Effect of some toxicants. . . . .	226
6.5.9. Sludge settling issues. . . . .	227
6.6. Activated sludge ecology. . . . .	230
6.7. Aeration of activated sludge tanks. . . . .	233
6.7.1. O <sub>2</sub> transfer. . . . .	233
6.7.2. Influence of some factors on C <sub>s</sub> and K <sub>L</sub> a. . . . .	236
6.7.3. Aeration systems. . . . .	243
6.7.4. Surface aerators. . . . .	249
6.7.5. Deep-water aerators. . . . .	252
6.7.6. Conditions of use of aeration systems. . . . .	253
6.7.7. Aerator design. . . . .	257
6.7.8. Using pure oxygen. . . . .	277

6.8. Activated sludge processing technology . . . . .	278
6.8.1. Conventional activated sludge . . . . .	278
6.8.2. Contact stabilization . . . . .	284
6.8.3. Full mixing . . . . .	286
6.8.4. Sequencing batch reactor. . . . .	287
6.8.5. Bioring™ process. . . . .	289
6.9. Examples of dimensioning the activated sludge process . . . . .	291
6.9.1. Example 1: calculation of a low load aeration tank . . . . .	291
6.9.2. Example 2: calculation of an aeration tank fed under medium loading . .	293
6.9.3. Example 3: population of 3,000,000 inhabitants . . . . .	295
6.9.4. Example 4: population of 12,500 inhabitants. . . . .	302
6.10. References . . . . .	307
