Preface	xi
Part 1. Overview of the Current Research in Acoustic Metamaterials	1
Chapter 1. Visco-thermal Effects in Acoustic Metamaterials Based on Local Resonances	3
José SÁNCHEZ-DEHESA and Vicente CUTANDA HENRÍQUEZ	
1.1. Introduction	3
1.2. Viscothermal effects: numerical methods	5
1.2.1. Finite element method with losses	5
1.2.2. Boundary element method with losses	6
1.3. Viscothermal effects in metamaterials with negative bulk modulus	10
1.4. Viscothermal effects in metamaterials with double-negative parameters	15
1.5. Acknowledgments	21
1.6. References	22
Chapter 2. Locally Resonant Metamaterials for Plate Waves: the Respective Role of Compressional Versus Flexural Resonances of a Dense Forest of Vertical Rods	25
Martin LOTT and Philippe ROUX	
2.1. Introduction	25
2.2. Experimental configuration of the metamaterial at the laboratory scale	27
2.3. Interpretation of dispersion curve restricted to the rod compressional resonances	29

2.4. The role played by flexural resonances of the rods	38
2.5. Conclusion	43
2.6. References	43
Chapter 3. Slow Sound and Critical Coupling to Design Deep Subwavelength Acoustic Metamaterials for Perfect Absorption and Efficient Diffusion	47
Vicente ROMERO-GARCÍA, Noé JIMÉNEZ and Jean-Philippe GROBY	
3.1. Introduction	47
3.2. Building block of the acoustic metamaterial: finite slit loaded with Helmholtz resonators	49
3.2.1. Theoretical modeling: transfer-matrix method	50
3.2.2. Infinite main slit: dispersion relation and slow sound effect	54
3.2.3. Finite slits	54
3.3. Ultra-thin acoustic metamaterial absorbers	57
3.3.1. Monochromatic frequency absorber	57
3.3.2. Rainbow-trapping absorber	60
3.4. Metadiffusers	63
3.4.1. Quadratic residue metadiffusers	64
3.4.2. Broadband optimal metadiffusers	66
3.5. Conclusions	68
3.6. Acknowledgments	69
3.7. References	69
Part 2. Principles and Fundamentals of Acoustic Metamaterials	73
Chapter 4. Homogenization of Thin 3D Periodic Structures in the Time Domain – Effective Boundary and Jump Conditions	75
Agnès MAUREL, Kim PHAM and Jean-Jacques MARIGO	
4.1. The asymptotic analysis – two scale expansions and matching conditions	80
4.1.1. Two scales and two regions	80
4.1.2. The hierarchies of equations in the inner and outer regions	81
4.1.3. The matching conditions	82
4.2. Effective boundary condition on a structured rigid wall	83
4.2.1. A trivial boundary condition at the order 1	84
4.2.2. A less trivial boundary condition at the order 2	84
4.2.3. Construction of a unique problem	88
4.3. Effective jump conditions across a structured film	88
4.3.1. Jump conditions at the order 1	89
4.3.2. Jump conditions at the order 2	90

4.3.3. An alternative form of the effective jump conditions on a unique problem	93
4.4. Considerations on the equation of energy conservation	94
4.4.1. Energy \mathcal{E}^{ef} supported by the effective surface Σ_e	96
4.4.2. Energy \mathcal{E}^{ef} supported by the effective interface Γ_e	97
4.4.3. Positiveness of the effective energies	98
4.5. Concluding remarks	101
4.6. References	102
Chapter 5. The Plane Wave Expansion Method	107
Jérôme VASSEUR	
5.1. Introduction	107
5.2. One-dimensional atomic chains	108
5.2.1. One-dimensional atomic chain with one atom by unit cell	108
5.2.2. One-dimensional atomic chain with two atoms by unit cell	110
5.3. The plane wave expansion method	112
5.3.1. Plane wave expansion method for bulk phononic crystals	112
5.3.2. Limits of the PWE method	128
5.3.3. Modified PWE method for complex band structures	135
5.4. Conclusion	139
5.5. Acknowledgments	139
5.6. References	139
Chapter 6. Introduction to Multiple Scattering Theory	143
Logan SCHWAN and Jean-Philippe GROBY	
6.1. Introduction	143
6.2. Statement of the problem	144
6.2.1. Notion of multiple scattering	144
6.2.2. Helmholtz equation and boundary conditions	145
6.2.3. Undisturbed field, scattered fields and radiation condition	146
6.2.4. Wavefunctions in multiple scattering theory	147
6.3. Scattering of sound by a cluster of cylindrical obstacles	148
6.3.1. Cylindrical wavefunctions in polar coordinate systems	149
6.3.2. Scattering coefficients and addition theorem	151
6.3.3. Application of boundary conditions	153
6.3.4. Matrix formulation	154

6.3.5. Forcing coefficients in the case of an incident plane wave	156
6.3.6. Forcing coefficients in the case of a line source	157
6.3.7. Total scattered field and actual pressure	158
6.3.8. Permeable obstacles	159
6.4. Scattering of sound by a periodic row of obstacles: the single grating array	160
6.4.1. Quasi-periodicity	161
6.4.2. Lattice sums and scattering coefficients of the array	162
6.4.3. Emergence of Bloch's waves and Wood's anomaly	165
6.4.4. Interaction of the array with a plane boundary	167
6.5. Scattering of sound by a multi-grating array	169
6.5.1. Transfer matrix formulation for the single grating	170
6.5.2. Sound scattering by the multi-grating array	174
6.5.3. Band diagram calculation	176
6.6. Application to sonic crystals	177
6.7. Conclusion	179
6.8. Acknowledgments	179
6.9. References	179
Part 3. Applications of Acoustic Metamaterials	183
Chapter 7. Acoustic Metamaterials for Industrial Applications	185
Clément LAGARRIGUE and Damien LECOQ	
7.1. Introduction	185
7.2. Industrial context	185
7.3. Absorption case	187
7.4. Transmission case	195
7.5. Concluding remarks	201
7.6. References	201
Chapter 8. Elastic Metamaterials for Radiofrequency Applications	207
Sarah BENCHABANE and Alexandre REINHARDT	
8.1. Hypersonic elastic waves and their applications	209
8.2. Hypersonic crystals	213
8.2.1. Micron-scale fabrication	214
8.2.2. Experimental demonstrations of hypersonic band gaps	220
8.3. Phononics for RF signal processing	232

8.3.1. Phononic waveguides	232
8.3.2. Phononic crystal cavities	236
8.4. Practical applications of phononic crystals	242
8.4.1. Phononics for MEMS resonators	242
8.4.2. Phononics for surface acoustic wave resonators	244
8.4.3. Phononics for photonics	248
8.5. Perspectives	251
8.6. References	253

Chapter 9. Acoustic Metamaterials and Underwater Acoustics Applications

Christian AUDOLY	
9.1. Materials for underwater acoustics: what applications?	263
9.1.1. Reduction of noise radiated from underwater vehicles	263
9.1.2. Reduction of acoustic target strength of underwater vehicles	265
9.1.3. Integration of acoustic detection systems	266
9.1.4. Underwater acoustics environmental issues	266
9.2. Definitions and characterization	268
9.2.1. General	268
9.2.2. The acoustic cloak concept	269
9.2.3. Determination of performances of underwater acoustic materials and coatings	271
9.3. Overview of current technology	273
9.3.1. Micro-inclusion-type acoustic coatings	274
9.3.2. Alberich-type acoustic coatings	275
9.4. Examples of research in underwater acoustics metamaterials	276
9.4.1. Compliant tube gratings	276
9.4.2. Metamaterials formed with a periodic arrangement of inclusions in a viscoelastic matrix	278
9.4.3. Metamaterials formed with a random distribution of inclusions in a viscoelastic matrix	280
9.5. Challenges and perspectives	283
9.6. References	284

Appendices	287
Appendix 1	289
Agnès MAUREL, Kim PHAM and Jean-Jacques MARIGO	
Appendix 2	291
Logan SCHWAN and Jean-Philippe GROBY	
List of Authors	297
Index	299
