|---|-------|
| <b>Preface</b> . . . . .  | xv    |
| <b>Selection of Publications</b> . . . . .  | xix   |
| <b>Introduction</b> . . . . .   | xxiii |
| <b>Part 1. From Gene to Species: Variability,<br/>Randomness and Stability</b> . . . . .                  | 1     |
| <b>Chapter 1. The Emergence of Life: Some Notes<br/>on the Origin of Biological Information</b> . . . . . | 3     |
| Antonio LAZCANO   |       |
| 1.1. Acknowledgments . . . . .  | 12    |
| 1.2. Bibliography . . . . .   | 12    |
| <b>Chapter 2. Fluctuating RNA</b> . . . . .   | 17    |
| Giuseppe ZACCAI, Marie-Christine MAUREL and Ada YONATH  |       |
| 2.1. The ribosome . . . . .   | 17    |
| 2.2. Ribosome dynamics . . . . .  | 18    |
| 2.3. Primitive RNA, ribozymes and viroids . . . . .   | 20    |
| 2.4. The proto-ribosome . . . . .   | 21    |
| 2.5. Bibliography . . . . .   | 22    |
| <b>Chapter 3. Artificial Darwinian Evolution of Nucleic Acids</b> . . . . .                               | 23    |
| Frédéric DUCONGÉ  |       |
| 3.1. Refresher on Darwin's theory of evolution . . . . .  | 23    |
| 3.2. The molecular mechanisms of evolution . . . . .  | 24    |

---

|  |    |
|--|----|
| 3.3. Molecular evolution external to the being . . . . .   | 25 |
| 3.4. Imagery of molecular evolution . . . . .  | 26 |
| 3.5. Conclusion . . . . .  | 27 |
| 3.6. Acknowledgments . . . . .   | 27 |
| 3.7. Bibliography . . . . .  | 27 |
| <b>Chapter 4. Information and Epigenetics</b> . . . . .  | 29 |
| András PÁLDI   |    |
| 4.1. Bibliography . . . . .  | 34 |
| <b>Chapter 5. Molecular Forces and Motion in the<br/>Transmission of Information in Biology</b> . . . . .    | 37 |
| Giuseppe ZACCAI  |    |
| 5.1. The dynamics–function hypothesis . . . . .  | 37 |
| 5.2. From thermodynamics to molecular forces . . . . .   | 38 |
| 5.3. Like the devil, biology is in the details . . . . .   | 39 |
| 5.4. The guitar in the river: theoretical MD . . . . .   | 40 |
| 5.5. Experimental MD . . . . .   | 40 |
| 5.6. Measuring average MD in whole cells . . . . .   | 41 |
| 5.7. Dynamics response to stress . . . . .   | 41 |
| 5.8. Conclusion: evolution “is obliged” to select dynamics . . . . .   | 42 |
| 5.9. Bibliography . . . . .  | 42 |
| <b>Chapter 6. Decline and Contingency,<br/>Bases of Biological Evolution</b> . . . . .                       | 45 |
| Bernard DUJON  |    |
| 6.1. Introduction . . . . .  | 45 |
| 6.2. Too many genes in the genomes . . . . .   | 46 |
| 6.3. Parasitism and symbiosis . . . . .  | 48 |
| 6.4. Asexual eukaryotes . . . . .  | 49 |
| 6.5. Yeasts . . . . .  | 50 |
| 6.6. Conclusion . . . . .  | 52 |
| 6.7. Bibliography . . . . .  | 52 |
| <b>Chapter 7. Conservation, Co-evolution and Dynamics:<br/>From Sequence to Function</b> . . . . .           | 55 |
| Alessandra CARBONE   |    |
| 7.1. Introduction . . . . .  | 55 |
| 7.2. Reverse engineering: from the protein described in a single<br>dimension to its 3D properties . . . . . | 56 |

|   |           |
|---|-----------|
| 7.3. Before any modeling, the geometric and physical properties, the behavior and history of proteins are characterized . . . . .                       | 57        |
| 7.3.1. Proteins are dynamic objects . . . . .   | 57        |
| 7.3.2. Proteins have a history . . . . .  | 57        |
| 7.3.3. Some proteins share the same evolutionary history . . . . .  | 57        |
| 7.4. Chance and selection govern the generation of observed sequences . .   | 58        |
| 7.5. Conservation and interaction sites of proteins . . . . .   | 59        |
| 7.6. Co-evolution: identification of contacts that can occur at different moments in the lifetime of a protein . . . . .                                | 60        |
| 7.7. Co-evolution used to reconstruct protein–protein interaction networks in viruses . . . . .   | 61        |
| 7.8. Molecular modeling of several partners used to reconstruct protein–protein interaction networks for prokaryotic and eukaryotic organisms . . . . . | 63        |
| 7.9. Dynamics and function . . . . .  | 64        |
| 7.10. Conclusions . . . . .   | 64        |
| 7.11. Acknowledgments . . . . .   | 65        |
| 7.12. Bibliography . . . . .  | 65        |
| <b>Chapter 8. Localization of the Morphodynamic Information in Amniote Formation . . . . .</b>  | <b>69</b> |
| Vincent FLEURY  |           |
| 8.1. Introduction . . . . .   | 69        |
| 8.2. Schematic view of an amniote . . . . .   | 70        |
| 8.3. Mechanism of amniote formation . . . . .   | 74        |
| 8.4. Additional features . . . . .  | 77        |
| 8.5. Discussion and conclusion . . . . .  | 78        |
| 8.6. Bibliography . . . . .   | 79        |
| <b>Chapter 9. From the Century of the Gene to that of the Organism: Introduction to New Theoretical Perspectives . . . . .</b>                          | <b>81</b> |
| Maël MONTÉVIL, Giuseppe LONGO and Ana SOTO  |           |
| 9.1. Introduction . . . . .   | 81        |
| 9.2. Philosophical positions . . . . .  | 87        |
| 9.3. From the inert to the living . . . . .   | 87        |
| 9.4. Cell theory: a starting point toward a theory of organisms . . . . .   | 88        |
| 9.5. The founding principles: from entanglement to integration? . . . . .   | 89        |
| 9.5.1. Genealogy of the three proposed principles: the default state, the principle of organization and the principle of variation . . . . .            | 89        |
| 9.5.2. How to organize these principles into a coherent ensemble? . . . . .   | 90        |

---

|   |            |
|---|------------|
| 9.6. Conclusion . . . . .   | 92         |
| 9.7. Acknowledgments . . . . .  | 94         |
| 9.8. Bibliography . . . . .   | 94         |
| <b>Chapter 10. The Game of Survival, Chance and Complexity . . . . .</b>  | <b>99</b>  |
| Philippe KOURILSKY  |            |
| 10.1. Introduction . . . . .  | 99         |
| 10.2. Complex systems . . . . .   | 100        |
| 10.2.1. Definition . . . . .  | 100        |
| 10.2.2. How to evaluate the complexity of a system? . . . . .             | 102        |
| 10.2.3. The notion of robustness . . . . .                                | 102        |
| 10.3. Chance and robustness in living organisms . . . . .                 | 103        |
| 10.3.1. The system of natural defenses in living organisms . . . . .      | 103        |
| 10.3.2. Natural defenses and robustness . . . . .                         | 103        |
| 10.3.3. Natural defenses, chance and hazards . . . . .                    | 104        |
| 10.4. Evolution and chance . . . . .                                      | 105        |
| 10.4.1. On the links between robustness and evolution . . . . .           | 105        |
| 10.4.2. On human evolution . . . . .                                      | 106        |
| 10.5. Conclusion: the logic of the living . . . . .                       | 107        |
| 10.6. Bibliography . . . . .  | 108        |
| <b>Chapter 11. Life from the Origins to Homo sapiens . . . . .</b>        | <b>109</b> |
| Jean FOURTAUX   |            |
| 11.1. Setting the scene . . . . .   | 109        |
| 11.2. The conquest of solid earth by the vertebrates . . . . .            | 110        |
| 11.3. A few insights on evolution . . . . .                               | 111        |
| 11.3.1. The horse . . . . .   | 112        |
| 11.3.2. Eagle and vulture . . . . .                                       | 112        |
| 11.3.3. The cetaceans . . . . .   | 112        |
| 11.3.4. The Red Queen . . . . .   | 112        |
| 11.3.5. The spotted hyena . . . . .                                       | 112        |
| 11.4. Primates and humans . . . . .                                       | 113        |
| <b>Chapter 12. Plankton Chronicles and the Tara Expeditions . . . . .</b> | <b>117</b> |
| Christian SARDET  |            |
| 12.1. Plankton . . . . .  | 117        |
| 12.2. Plankton and climate . . . . .                                      | 118        |
| 12.3. The Tara Oceans expedition . . . . .                                | 121        |
| 12.4. Bibliography . . . . .  | 123        |

|  |     |
|--|-----|
| <b>Chapter 13. The Living Species is Not a Natural Kind but an Intellectual Construction</b> . . . . . | 125 |
| Philippe GRANDCOLAS  |     |
| 13.1. Introduction . . . . .   | 125 |
| 13.2. Two ways to study evolution: genealogy versus phylogeny . . . . .                                | 126 |
| 13.3. Three main families of concepts of species . . . . .   | 128 |
| 13.4. Reconciling the different concepts: pragmatism or essentialism? . . . . .                        | 130 |
| 13.5. The species and the taxon name . . . . .   | 131 |
| 13.6. The nature of species: a salutatory philosophical exercise . . . . .                             | 132 |
| 13.7. Bibliography . . . . .   | 135 |
| <br>   |     |
| <b>Chapter 14. The Boxes and their Content: What to Do with Invariants in Biology?</b> . . . . .       | 139 |
| Guillaume LECOINTRE  |     |
| 14.1. Natural history . . . . .  | 139 |
| 14.2. Natural history and evolution . . . . .  | 141 |
| 14.3. The species . . . . .  | 142 |
| 14.4. The grade . . . . .  | 146 |
| 14.5. Genetic information . . . . .  | 146 |
| 14.6. The body plan. . . . .   | 148 |
| 14.7. On the misuse of convergences . . . . .  | 149 |
| 14.8. Conclusion . . . . .   | 151 |
| 14.9. Bibliography . . . . .   | 151 |
| <br>   |     |
| <b>Chapter 15. Probability, Sense and Evolution (Promenade)</b> . . . . .                              | 153 |
| Cédric VILLANI   |     |
| 15.1. Introduction . . . . .   | 153 |
| 15.2. Difficult dialogue . . . . .   | 154 |
| 15.3. Knowledge and big data . . . . .   | 155 |
| 15.4. The probabilities . . . . .  | 156 |
| 15.5. A few striking examples . . . . .  | 157 |
| 15.5.1. Pagerank . . . . .   | 157 |
| 15.5.2. Decoding . . . . .   | 157 |
| 15.5.3. Reconstitution of preferences . . . . .  | 157 |
| 15.5.4. Correspondence between genotype and phenotype . . . . .  | 158 |
| 15.5.5. Phylogeny . . . . .  | 158 |
| 15.5.6. Automatic recognition . . . . .  | 160 |
| 15.5.7. Autopilot . . . . .  | 160 |
| 15.5.8. Imitation of styles . . . . .  | 160 |
| 15.5.9. And all the rest. . . . .  | 160 |
| 15.6. The MCMC method . . . . .  | 160 |

|  |            |
|--|------------|
| 15.7. Neural networks . . . . .  | 162        |
| 15.8. A few questions . . . . .  | 164        |
| 15.8.1. Do we understand? . . . . .  | 164        |
| 15.8.2. Describing convergence . . . . .   | 165        |
| 15.8.3. Geometrizing. . . . .  | 166        |
| 15.8.4. Varied questions. . . . .  | 166        |
| 15.9. Bibliography . . . . .   | 167        |
| <b>Part 2. Program and Life: Individuation and Interaction . . . . .</b>                               | <b>169</b> |
| <b>Chapter 16. Towards an Algorithmic Approach to Life Sciences . . . . .</b>                          | <b>171</b> |
| G rard BERRY   |            |
| 16.1. Prologue . . . . .   | 171        |
| 16.2. Matter, energy, waves and information. . . . .   | 172        |
| 16.3. Medical imaging . . . . .  | 173        |
| 16.4. The simulation of the living . . . . .   | 175        |
| 16.5. Computer modeling and its levels of abstraction . . . . .  | 176        |
| 16.6. The role of embedded computing . . . . .   | 178        |
| 16.7. Other subjects. . . . .  | 179        |
| 16.8. But is all this without danger? . . . . .  | 180        |
| 16.9. The importance of training . . . . .   | 182        |
| <b>Chapter 17. Where Does the Notion of Function Come From? . . . . .</b>                              | <b>183</b> |
| Heinz WISMANN  |            |
| <b>Chapter 18. The Contribution of Artificial Life<br/>to Theoretical Biology . . . . .</b>            | <b>191</b> |
| Hugues BERSINI   |            |
| 18.1. Introduction . . . . .   | 191        |
| 18.2. Support to pedagogy. . . . .   | 192        |
| 18.3. Food for thought: a philosophy in software form . . . . .  | 193        |
| 18.4. Conclusions: royal life, falsifiable modeling . . . . .  | 198        |
| 18.5. Bibliography . . . . .   | 199        |
| <b>Chapter 19. Biochemical Programs and Analog-<br/>Digital Mixed Algorithms in the Cell . . . . .</b> | <b>201</b> |
| Fran ois FAGES and Guillaume LE GULUDEC  |            |
| 19.1. Introduction . . . . .   | 201        |
| 19.2. Biochemical programs . . . . .   | 202        |
| 19.2.1. Syntax. . . . .  | 202        |
| 19.2.2. Semantics. . . . .   | 203        |

|  |            |
|--|------------|
| 19.2.3. Example of MAPK signaling networks . . . . .   | 203        |
| 19.3. Behavioral logical specifications . . . . .  | 205        |
| 19.4. Analog specifications . . . . .  | 206        |
| 19.4.1. Computability and analog complexity theory. . . . .                                    | 206        |
| 19.4.2. Computability and biochemical algorithmic complexity . . . . .                         | 208        |
| 19.4.3. GPAC biochemical compilation . . . . .   | 210        |
| 19.4.4. Analog–digital converter compared to MAPK . . . . .                                    | 211        |
| 19.5. Biochemical compilation of sequentiality and cell cycle . . . . .                        | 212        |
| 19.6. Discussion. . . . .  | 213        |
| 19.7. Bibliography . . . . .   | 214        |
| <b>Chapter 20. From Computational Physics to the Origins of Life . . . . .</b>                 | <b>217</b> |
| A. Marco SAITTA  |            |
| 20.1. Prebiotic emergence of the basic bricks of life . . . . .                                | 217        |
| 20.2. Computational approaches and simulations in chemistry . . . . .                          | 219        |
| 20.3. Computational approaches and simulations in prebiotic chemistry . . . . .                | 220        |
| 20.4. New challenges in modeling: reaction networks . . . . .                                  | 222        |
| 20.5. At the frontiers of modeling in prebiotic chemistry:<br>topological approaches. . . . .  | 224        |
| 20.6. Conclusion and perspectives . . . . .  | 227        |
| 20.7. Bibliography . . . . .   | 227        |
| <b>Chapter 21. Computing and the Temptation of Babel . . . . .</b>                             | <b>231</b> |
| Kavé SALAMATIAN  |            |
| 21.1. Introduction . . . . .   | 232        |
| 21.2. The role of information technologies . . . . .   | 233        |
| 21.3. On conflicts of rationality and more specifically<br>on rationality in biology . . . . . | 236        |
| 21.4. Information and its role in biology . . . . .  | 239        |
| 21.5. Conclusion . . . . .   | 241        |
| 21.6. Acknowledgments . . . . .  | 241        |
| 21.7. Bibliography . . . . .   | 241        |
| <b>Chapter 22. Big Data, Knowledge and Biology . . . . .</b>                                   | <b>243</b> |
| Giuseppe LONGO and Maël MONTÉVIL   |            |
| 22.1. Introduction . . . . .   | 243        |
| 22.2. Big databases, prediction and chance . . . . .   | 245        |
| 22.3. Bibliography . . . . .   | 247        |

|   |     |
|---|-----|
| <b>Chapter 23. Natural Language, Formal Language and the Description of the Living World</b> . . . . .                          | 249 |
| Régine VIGNES LEBBE   |     |
| 23.1. Introduction . . . . .  | 249 |
| 23.2. Describing the living world. . . . .  | 250 |
| 23.2.1. The objects in the description of the living world . . . . .  | 250 |
| 23.2.2. Describing specimens . . . . .  | 251 |
| 23.2.3. Describing taxa . . . . .   | 252 |
| 23.3. Formal language . . . . .   | 253 |
| 23.3.1. Semantic step . . . . .   | 253 |
| 23.3.2. The characters: several concepts . . . . .  | 254 |
| 23.3.3. Structured computerization of knowledge. . . . .  | 255 |
| 23.4. Conclusion . . . . .  | 256 |
| 23.5. Bibliography . . . . .  | 257 |
| <b>Chapter 24. Vital Individuation and Morphogenetic Information</b> . . . . .  | 259 |
| Vincent BONTEMS   |     |
| 24.1. Introduction . . . . .  | 259 |
| 24.2. The theory of vital individuation . . . . .   | 261 |
| 24.3. Lamarck's ghost . . . . .   | 263 |
| 24.4. DNA and its transductions . . . . .   | 266 |
| 24.5. Schrödinger's flower . . . . .  | 269 |
| <b>Chapter 25. How to Account for Interspecies Socio-cultural Phenomena? An Evolutionist and Interactionist Model</b> . . . . . | 273 |
| Dominique GUILLO  |     |
| 25.1. The difficult dialogue between social sciences and life sciences. . . . .   | 273 |
| 25.2. The empire of the principle of identity in theories of society and culture. . . . .                                       | 274 |
| 25.3. A field of neglected social and cultural phenomena . . . . .  | 276 |
| 25.4. Linking social sciences and life sciences. . . . .  | 279 |
| 25.5. Bibliography . . . . .  | 281 |
| <b>Chapter 26. Life: A Simplex Whirlwind between Matter, Energy and Information</b> . . . . .                                   | 283 |
| Jean-Claude BARREY  |     |
| 26.1. Introduction . . . . .  | 283 |
| 26.2. The Craig–Lorenz principle, traditional base of animal and human behavior . . . . .                                       | 284 |
| 26.3. The formulations incompatible with modern systemic biology . . . . .  | 284 |
| 26.4. Lorenz's principle reformulated based on current biological data . . . . .  | 287 |

|   |            |
|---|------------|
| 26.5. Ethosociological interpretation of the reformulated principle . . . . .   | 287        |
| 26.5.1. Ontogenesis, sociogenesis and phylogenesis . . . . .  | 287        |
