<b>Preface</b> . . . . .	ix
<b>Introduction</b> . . . . .	xiii
<b>Part 1. Analog Feedback Control Systems</b> . . . . .	1
<b>Chapter 1. Models of Dynamic Processes</b> . . . . .	3
1.1. Introduction to dynamic processes . . . . .	3
1.1.1. Definition, hypotheses and notations . . . . .	3
1.1.2. Implications of hypotheses . . . . .	4
1.1.3. Dynamic model: an automation perspective . . . . .	5
1.2. Transfer functions . . . . .	6
1.2.1. Existence conditions . . . . .	6
1.2.2. Construction . . . . .	6
1.2.3. General structure of a transfer function . . . . .	8
1.2.4. Tools for the analysis of the properties of transfer functions . . . . .	8
1.2.5. First- and second-order transfer functions . . . . .	8
1.3. State models . . . . .	12
1.3.1. Definition . . . . .	12
1.3.2. Illustrative example . . . . .	13
1.3.3. General structure of the state model . . . . .	14
1.4. Linear state models with constant parameters . . . . .	15
1.4.1. Linearization-based construction . . . . .	15
1.4.2. Structure of a linear state model with constant parameters . . . . .	16
1.4.3. Properties of a model without pure input delay ( $\tau_0 = 0$ ) . . . . .	18
1.5. Similarity transformation . . . . .	20
1.6. Exercises and solutions . . . . .	21

<b>Chapter 2. Experimental Modeling Approach of Dynamic Processes</b> . . . . .	39
2.1. Introduction to experimental modeling . . . . .	39
2.1.1. Problem statement . . . . .	39
2.1.2. Principle of experimental modeling . . . . .	39
2.1.3. Experimental modeling methodology . . . . .	40
2.2. Step response-based modeling . . . . .	44
2.2.1. Model of order 1 . . . . .	44
2.2.2. Under-damped model of order 2 ( $\xi < 1$ ) . . . . .	44
2.2.3. Damped model of order $\geq 2$ (Strejc method) . . . . .	46
2.3. Frequency response-based modeling . . . . .	50
2.4. Modeling based on ARMA model . . . . .	52
2.4.1. ARMA model . . . . .	52
2.4.2. Parameter estimation of an ARMA model . . . . .	54
2.5. Matlab-aided experimental modeling . . . . .	56
2.6. Exercises and solutions . . . . .	58
<b>Chapter 3. Review of Analog Feedback Control Systems</b> . . . . .	73
3.1. Open-loop analog control . . . . .	73
3.1.1. Principle . . . . .	73
3.1.2. Open-loop control . . . . .	74
3.2. Analog control system . . . . .	74
3.3. Performances of an analog control system . . . . .	75
3.3.1. Closed-loop transfer functions . . . . .	75
3.3.2. Performance quantities . . . . .	76
3.4. Simple analog controllers . . . . .	76
3.5. PID/PIDF controllers . . . . .	77
3.5.1. Structure and role of the parameters of a PID/PIDF controller . . . . .	77
3.5.2. Ziegler–Nichols methods for parameter calculation . . . . .	79
3.5.3. Calculation of parameters by pole placement . . . . .	79
3.5.4. Direct calculation of optimal PID parameters . . . . .	81
3.5.5. LQR-based indirect calculation of optimal PID parameters . . . . .	85
3.5.6. Implementation of analog controllers . . . . .	85
3.6. Controllers described in the state space . . . . .	86
3.6.1. Principle and block diagram of a linear state feedback . . . . .	86
3.6.2. Techniques for calculating the state feedback gain . . . . .	87
3.6.3. Integral action state feedback . . . . .	88
3.6.4. State feedback with integral action and observer . . . . .	90
3.6.5. State feedback with output error compensator . . . . .	92

3.7. Principle of equivalence between PID and LQR controllers . . . . .	92
3.7.1. Proof of the equivalence principle . . . . .	93
3.7.2. Equivalence relation . . . . .	96
3.7.3. Case study . . . . .	96
3.8. Exercises and solutions . . . . .	99
<b>Part 2. Synthesis and Computer-aided Simulation of Digital Feedback Control Systems . . . . .</b>	<b>123</b>
<b>Chapter 4. Synthesis of Digital Feedback Control Systems in the Frequency Domain . . . . .</b>	<b>125</b>
4.1. Synthesis methodology . . . . .	125
4.2. Transfer function $G(z)$ of a dynamic process . . . . .	125
4.2.1. Sampled dynamic model . . . . .	125
4.2.2. Discretization of $G_c(p)$ if input delay $\tau_0 = 0$ . . . . .	126
4.2.3. Discretization of $G_c(s)$ if input delay $\tau_0 \neq 0$ . . . . .	128
4.2.4. Examples of calculation of $G(z)$ by discretization of $G_c(s)$ . . . . .	132
4.3. Transfer function $D(z)$ : discretization method . . . . .	136
4.3.1. Interest of discretization . . . . .	136
4.3.2. Discretization of $D_c(s)$ by invariance methods . . . . .	137
4.3.3. Discretization of $D_c(s)$ by transformation methods . . . . .	139
4.3.4. z-Transfer functions of simple controllers . . . . .	142
4.3.5. General structure of $D(z)$ and recurrence equation . . . . .	144
4.3.6. Discretization of transfer functions with Matlab . . . . .	145
4.4. Transfer function $D(z)$ : model method . . . . .	146
4.4.1. Principle of the model method . . . . .	146
4.4.2. Examples of direct design of digital controllers . . . . .	146
4.4.3. Conditions for the use of model approach . . . . .	148
4.4.4. Practical rules for using the model approach . . . . .	149
4.5. Discrete block diagram of digital control . . . . .	150
4.5.1. Closed-loop characteristic transfer functions . . . . .	151
4.5.2. Sampling frequency . . . . .	152
4.6. Exercises and solutions . . . . .	154
<b>Chapter 5. Computer-aided Simulation of Digital Feedback Control Systems . . . . .</b>	<b>177</b>
5.1. Approaches to computer-aided simulation . . . . .	177
5.2. Programming of joint recurrence equations . . . . .	178
5.2.1. Formulation . . . . .	178
5.2.2. Example of Matlab® programming . . . . .	179
5.3. Simulation using Matlab macro programming . . . . .	183

---

5.4. Graphic simulation . . . . .	186
5.5. Case study: simulation of servomechanisms . . . . .	187
5.5.1. Simulation of a speed servomechanism . . . . .	187
5.5.2. Simulation of a position servomechanism . . . . .	191
5.6. Exercises and solutions . . . . .	194
<b>Chapter 6. Discrete State Models of Dynamic Processes . . . . .</b>	<b>199</b>
6.1. Discretization of the state model of a dynamic process . . . . .	199
6.1.1. Discretization of a state model . . . . .	200
6.1.2. Discretization of a state model with input delay . . . . .	201
6.2. Calculation of {A, B, C, D} parameters of a discrete state model . . . . .	204
6.2.1. Calculation of $A = e^{AT}$ . . . . .	204
6.2.2. Calculation of B . . . . .	206
6.2.3. Calculation of C and D . . . . .	208
6.3. Properties of a discrete state model {A, B, C, D} . . . . .	208
6.3.1. Infinity of state models of one dynamic process . . . . .	208
6.3.2. Stability . . . . .	209
6.3.3. Controllability and stabilizability . . . . .	209
6.3.4. Observability and detectability . . . . .	210
6.4. Exercises and solutions . . . . .	210
<b>Appendices . . . . .</b>	<b>215</b>
<b>Appendix 1. Table of Z-transforms . . . . .</b>	<b>217</b>
<b>Appendix 2. Matlab® Elements Used in This Book . . . . .</b>	<b>219</b>
<b>Bibliography . . . . .</b>	<b>223</b>
<b>Index . . . . .</b>	<b>227</b>
