Abbreviations and Notations	ix
Introduction	xi
Chapter 1. Integration with Respect to Stochastic Measures	1
1.1. Preliminaries	1
1.2. Stochastic measures	2
1.2.1. Definition and examples of SMs	2
1.2.2. Convergence defined by an SM	5
1.3. Integration of deterministic functions	6
1.4. Limit theorems for integral of deterministic functions	11
1.4.1. Convergence of $\int_A f_n d\mu$	13
1.4.2. Convergence of $\int_X f d\mu_n$	14
1.5. σ -finite stochastic measures	16
1.6. Riemann integral of a random function w.r.t. a deterministic measure	21
1.6.1. Definition of the integral	21
1.6.2. Interchange of the order of integration	27
1.6.3. Iterated integral and integration by parts	29
1.7. Exercises	32
1.8. Bibliographical notes	34

Chapter 2. Path Properties of Stochastic Measures	35
2.1. Sample functions of stochastic measures and Besov spaces	35
2.1.1. Besov spaces	35
2.1.2. Auxiliary lemmas	37
2.1.3. Stochastic measures on $[0, 1]$	42
2.1.4. Stochastic measures on $[0, 1]^d$	44
2.2. Fourier series expansion of stochastic measures	46
2.2.1. Convergence of Fourier series of the process $\mu(t)$	46
2.2.2. Convergence of stochastic integrals	49
2.3. Continuity of the integral	51
2.3.1. Estimate of an integral	51
2.3.2. Parameter dependent integral	54
2.3.3. Continuity with respect to the upper limit	55
2.4. Exercises	57
2.5. Bibliographical notes	59
Chapter 3. Equations Driven by Stochastic Measures	61
3.1. Parabolic equation in \mathbb{R} (case $d\mu^\sigma(x)$)	61
3.1.1. Problem and the main result	61
3.1.2. Lemma about the Hölder continuity in x	70
3.1.3. Lemma about the Hölder continuity in t	75
3.2. Heat equation in \mathbb{R}^d (case $d\mu(t)$)	78
3.2.1. Additional estimate of an integral	78
3.2.2. Problem and the main result	80
3.2.3. Lemma about the Hölder continuity in x	84
3.2.4. Lemma about the Hölder continuity in t	91
3.3. Wave equation in \mathbb{R} (case $d\mu(x)$)	99
3.3.1. Problem and the main result	99
3.3.2. Lemma about the Hölder continuity in x	102
3.3.3. Lemma about the Hölder continuity in t	106
3.4. Wave equation in \mathbb{R} (case $d\mu(t)$)	108
3.4.1. Problem and the main result	108
3.4.2. Lemma about the Lipschitz continuity in x	109
3.4.3. Lemma about the Hölder continuity in t	111
3.5. Parabolic evolution equation in \mathbb{R}^d (weak solution, case $d\mu(t)$)	114
3.6. Exercises	119
3.7. Bibliographical notes	120

Chapter 4. Approximation of Solutions of the Equations	123
4.1. Parabolic equation in \mathbb{R} (case $d\mu(x)$)	123
4.1.1. Problem and the main result	123
4.1.2. Auxiliary lemmas	130
4.1.3. Examples	133
4.2. Heat equation in \mathbb{R}^d (case $d\mu(t)$)	135
4.2.1. Problem and the main result	135
4.2.2. Auxiliary lemma	138
4.2.3. Examples	139
4.3. Wave equation in \mathbb{R} (case $d\mu(t)$)	140
4.3.1. Approximation by using the convergence of paths of SMs	140
4.3.2. Approximation by using the Fourier partial sums	142
4.3.3. Approximation by using the Fejèr sums	149
4.3.4. Auxiliary lemma	151
4.3.5. Example	153
4.4. Exercises	154
4.5. Bibliographical notes	155
Chapter 5. Integration and Evolution Equations in Hilbert Spaces	157
5.1. Preliminaries	157
5.2. Equations and integral with a real-valued SM	160
5.2.1. Integral w.r.t. a real-valued SM	160
5.2.2. Evolution equations driven by a real-valued SM	163
5.3. Equations and integrals with a Hilbert space-valued SM	166
5.3.1. Integrals w.r.t. a U-valued SM	166
5.3.2. Evolution equations driven by a U-valued SM	171
5.4. Exercises	172
5.5. Bibliographical notes	173
Chapter 6. Symmetric Integrals	175
6.1. Introduction	175
6.2. SM has finite strong cubic variation	176
6.3. Stratonovich-type integral	177
6.4. SDE driven by an SM	181
6.5. Wong–Zakai approximation	183
6.6. Some counterexamples	188
6.7. Exercises	192
6.8. Bibliographical notes	193

Chapter 7. Averaging Principle	195
7.1. Heat equation	195
7.1.1. Introduction	195
7.1.2. The problem	196
7.1.3. Averaging principle	197
7.2. Equation with the symmetric integral	202
7.2.1. Introduction	202
7.2.2. Averaging principle	205
7.3. Exercises	211
7.4. Bibliographical notes	212
Chapter 8. Solutions to Exercises	213
References	231
Index	241
