<b>Preface</b> . . . . .	ix
<b>Introduction</b> . . . . .	xi
<b>Chapter 1. Experimental Studies of Mechanical Properties of Polycarbonate</b> . . . . .	1
1.1. Uniaxial compression tests at various strain rates . . . . .	2
1.1.1. Experimental setup of quasi-static uniaxial compression tests . . . . .	2
1.1.2. Experimental setup of dynamic uniaxial compression tests . . . . .	4
1.1.3. Experimental results . . . . .	8
1.2. Uniaxial tension tests at various strain rates. . . . .	13
1.2.1. Experimental setup of quasi-static uniaxial tension tests. . . . .	13
1.2.2. Experimental setup of dynamic uniaxial tension tests . . . . .	14
1.2.3. Experimental results . . . . .	18
1.3. Quasi-static uniaxial compression tests at various temperatures. . . . .	24
1.4. Conclusion . . . . .	26
1.5. References . . . . .	27
<b>Chapter 2. Constitutive Models of Polycarbonate</b> . . . . .	29
2.1. Introduction to constitutive models for polycarbonate . . . . .	30
2.1.1. Linear viscoelastic model . . . . .	30
2.1.2. Viscoplastic model . . . . .	36
2.2. Damage-based elastic–viscoplastic model for polycarbonate . . . . .	42
2.2.1. Damage mechanism . . . . .	42
2.2.2. Helmholtz free energy . . . . .	44
2.2.3. Fundamental laws of thermodynamics . . . . .	45
2.2.4. Constitutive equations . . . . .	46
2.3. Calibration of model parameters . . . . .	51

2.4. Numerical integration algorithm . . . . .	55
2.4.1. Time-discrete framework . . . . .	55
2.4.2. A simplified integration algorithm of the time-discrete model . . . . .	56
2.5. Implementation of the constitutive model in LS-DYNA . . . . .	59
2.6. Numerical examples. . . . .	65
2.6.1. Single-element tests . . . . .	66
2.6.2. Cylinder compression simulation . . . . .	72
2.7. Conclusion . . . . .	73
2.8. References . . . . .	74
<b>Chapter 3. Impact Simulation of Polycarbonates in Aeronautical and Aerospace Applications . . . . .</b>	<b>79</b>
3.1. Simulation methodology and experimental verification. . . . .	80
3.1.1. Impact simulation methodology . . . . .	80
3.1.2. Gas gun impact tests . . . . .	86
3.1.3. Gas gun impact simulations. . . . .	89
3.2. Impact simulation in aeronautical and aerospace applications . . . . .	92
3.2.1. Polycarbonate windshield under bird impact. . . . .	92
3.2.2. Polycarbonate visor under debris impact . . . . .	104
3.3. Conclusion . . . . .	108
3.4. References . . . . .	109
<b>Chapter 4. Integrated Simulation of Injection Molding Process and Mechanical Behavior . . . . .</b>	<b>113</b>
4.1. Yield stress modeling from thermal history . . . . .	114
4.1.1. Govaert's yield stress model . . . . .	114
4.1.2. Experimental validations of the yield stress model . . . . .	118
4.2. Setup of the Izod impact test. . . . .	120
4.3. Integrated simulation framework . . . . .	121
4.4. Integrated simulation of the injection molding process and Izod impact. . . . .	122
4.4.1. Prediction of yield stress based on the injection molding simulation . . . . .	122
4.4.2. Constitutive model with the processing-induced inhomogeneity of yield stress . . . . .	125
4.4.3. Impact simulation. . . . .	126
4.4.4. Simulation results and comparisons with experiments . . . . .	127
4.5. Conclusion . . . . .	130
4.6. References . . . . .	131

---

<b>Chapter 5. Process Optimization of the Injection Molding for High Mechanical Performance</b> . . . . .	133
5.1. Integrated simulation framework of an astronaut's helmet visor . . . . .	135
5.1.1. Simulation of the injection molding process . . . . .	136
5.1.2. Residual stress analysis . . . . .	138
5.1.3. Yield stresses and constitutive model . . . . .	139
5.1.4. Impact simulation. . . . .	140
5.2. BP neural network model . . . . .	141
5.2.1. Generation of training data . . . . .	144
5.2.2. Training of the neural network . . . . .	145
5.2.3. Neural network testing. . . . .	146
5.3. Process optimization by the particle swarm optimization algorithm . . . . .	147
5.3.1. Optimization problem . . . . .	147
5.3.2. Basis of the PSO algorithm . . . . .	148
5.3.3. Variable limits handling strategy . . . . .	149
5.3.4. Optimization result . . . . .	151
5.4. Conclusion . . . . .	152
5.5. References . . . . .	153
<b>Index</b> . . . . .	155
