Preface	xi
Catherine DEJOIE, Pauline MARTINETTO and Nobumichi TAMURA	
Chapter 1. Introduction to Synchrotron Radiation: Application to the Study of Cultural Heritage Materials and Biominerals	1
Catherine DEJOIE, Pauline MARTINETTO and Nobumichi TAMURA	
1.1. Introduction	1
1.2. What is synchrotron radiation?	3
1.3. Synchrotron radiation and Cultural Heritage	8
1.4. Conclusion	11
1.5. Acknowledgments	12
1.6. References	12
Chapter 2. Development of the Use of Synchrotron Radiation for the Study of Cultural Heritage Materials	17
Nobumichi TAMURA, Catherine DEJOIE and Pauline MARTINETTO	
2.1. Introduction	17
2.2. Synchrotron techniques used in the study of cultural heritage materials	21
2.3. Study of specific pigments in ceramics, sculptures and murals	24
2.3.1. Iron oxide pigments in Jian wares	25
2.3.2. Maya Blue pigment in Mesoamerica	27
2.4. Study of paintings	32
2.5. Study of murals and rock art	35
2.6. Study of cosmetics	37
2.7. Study of parchments and manuscripts	38
2.8. Artwork restoration and preservation effort with synchrotron	40
2.9. Other cultural heritage studies	43
2.10. Study in paleontology	45
2.11. Conclusion	49

2.12. Acknowledgments	50
2.13. References	50

Chapter 3. Application of Full-field X-ray Absorption Spectroscopy Imaging in Transmission Mode to Study Cultural Heritage Samples. 69

Emeline POUYET, Letizia MONICO, Philippe SCIAU and Marine COTTE

3.1. Introduction	70
3.2. The worldwide context of tender and hard X-ray domain FF-XANES instruments	73
3.3. Typical acquisition, processing and sample preparation strategies for CH studies: the example of the FF-XANES set-up at beamline ID21 (ESRF)	75
3.3.1. Sample preparation	75
3.3.2. Acquisition and data pre-processing	77
3.3.3. Data analysis workflow.	78
3.3.4. A low fluence chemical imaging strategy for dedicated case studies	79
3.4. Applications of FF-XANES to study CH samples	82
3.4.1. Painting composition and degradation: historical cases and paint mock-ups	82
3.4.2. Combined instrumentation for a representative multi-scale characterization: the example of estimating firing conditions in ancient Roman ceramics	88
3.5. Conclusion	91
3.6. Acknowledgments	92
3.7. References	93

Chapter 4. Structural Cartography and Tomography by Diffraction/Diffusion: A Local Selective Analysis of Cultural Heritage Materials. 101

Jean-Louis HODEAU, Michèle ALVAREZ-MURGA, Michel ANNE,
Pierre-Olivier AUTRAN, Nils BLANC, Pierre BLEUET, Nathalie BOUDET,
Pierre BORDET, Sophie CERSONY, Catherine DEJOIE, Eric DOORYHÉE,
Florian KERGOULAY, Olivier LEYNAUD, Pauline MARTINETTO,
Alain PRAT and Philippe WALTER

4.1. Introduction	102
4.2. 2D mapping using diffraction.	104
4.2.1. First imaging experiments	104
4.2.2. 2D mapping of a “raw” heritage artifact	105
4.2.3. Complementarity of 2D mappings performed on samples and/or directly on artworks: the example of Lead White	110

4.3. 3D mapping by tomography	115
4.3.1. Method history	115
4.3.2. 3D tomography with different modes of physical interactions	116
4.3.3. Different types of 3D diffraction tomography	117
4.4. Diffraction/scattering computed tomography: DSCT.	118
4.4.1. Initial DSCT experiments	118
4.4.2. Methodology of DSCT analyses and reconstructions	120
4.4.3. Selectivity of DSCT analyses	121
4.4.4. Selectivity of “multimodal” DSCT analyses	124
4.4.5. The wide range of DSCT applications	126
4.4.6. Analysis tools for DSCT imaging	127
4.4.7. DSCT analyses dedicated to heritage materials	128
4.5. Conclusion	133
4.6. Acknowledgments	134
4.7. References	134
Chapter 5. Contribution of Synchrotron Radiation to the Study of Glazed Ancient Ceramics	151
Philippe SCIAU and Chantal BROUCA-CABARRECQ	
5.1. Introduction	151
5.2. The problem	152
5.3. Spectroscopic techniques	155
5.3.1. Microbeam absorption spectroscopy	155
5.3.2. “Full-field” imaging and spectroscopy	162
5.4. Diffraction techniques.	168
5.4.1. With a monochromatic beam (powder diffraction)	168
5.4.2. With a polychromatic beam (Laue method)	171
5.5. Conclusion	177
5.6. References	178
Chapter 6. Relevant Synchrotron X-rays Techniques to Study Corroded Iron Cultural Heritage Material	181
Solenn RÉGUER, François MIRAMBET, Judith MONNIER, Delphine NEFF, Eddy FOY and Philippe DILLMANN	
6.1. Introduction	181
6.2. Iron corrosion diagnosis in historical monuments	185
6.2.1. Identification of the corrosion products.	185
6.2.2. Specific chemical elements from the elaboration processes.	187
6.3. In situ experiments for a direct observation of corrosion processes	190
6.3.1. How to reveal atmospheric corrosion processes?	190
6.3.2. Iron corrosion in cement matrices of ancient building.	191

6.4. Archaeological objects corrosion and stabilization	192
6.4.1. Corrosion in anoxic soils	192
6.4.2. Specific Cl-containing corrosion products	193
6.4.3. Dechlorination treatment revealed.	195
6.5. Protection of ancient iron artifacts	195
6.6. Conclusion and outlook	196
6.7. Acknowledgments	197
6.8. References	198
Chapter 7. Synchrotron X-Ray Microdiffraction Studies of the Mortars of Ancient Roman Concretes.	203
Marie D. JACKSON, Heng CHEN, Jacob G. PETERSON, Cagla MERAL AKGUL and Bryony RICHARDS	
7.1. Introduction.	203
7.2. Standard powder X-ray diffraction studies of Roman mortars.	206
7.3. Synchrotron μ XRD and μ XRF studies of ancient Roman mortars	210
7.4. Architectural mortars – Markets and Forum of Trajan	212
7.4.1. Cementing matrix.	213
7.4.2. Vesicular scoria	215
7.4.3. Pumiceous aggregate	215
7.5. Marine harbor mortar – <i>Baianus Sinus</i> Bay of Pozzuoli	216
7.5.1. Relict lime clast and cementing matrix	219
7.5.2. Relict spherical void	220
7.6. Roman principles of concrete longevity	222
7.7. Conclusion	224
7.8. Acknowledgments	224
7.9. References	224
Chapter 8. Biomineralization in Sea Urchin Spines: A View on Amorphous Calcium Carbonate Occurrence, Stabilization and Crystallization	233
Marie ALBÉRIC and Ronald SEIDEL	
8.1. Introduction	233
8.2. Biomineralization in sea urchins	235
8.3. Occurrence of ACC precursors in regenerated sea urchin spines	239
8.3.1. Why X-ray photoemission electron spectromicroscopy and how?	239
8.3.2. Ca $L_{2,3}$ -edge XANES spectra	240
8.3.3. Calcium component maps	241

8.4. ACC structure and stability: role of water and ion impurities	242
8.4.1. ACCs structure	242
8.4.2. Why pair distribution function analysis and how?	243
8.4.3. PDFs of ACC and Mg-ACC	245
8.4.4. In situ PDFs during the crystallization of ACC and Mg-ACC	246
8.5. Induced crystallization of remnant ACC in sea urchin spines	247
8.5.1. Why high-resolution X-ray diffraction and how?	247
8.5.2. Biogenic calcite lattice distortions.	250
8.5.3. Why in situ Small Angle X-ray Scattering and how?	251
8.5.4. Quantification of the nanoporosity	251
8.6. Conclusion	252
8.7. Acknowledgments	253
8.8. References	253
List of Authors	263
Index	267
