Introduction	xi
Etienne COSSART and Anne RIVIÈRE-HONEGGER	
Part 1. Interactions and Flows: The Integration of Time	1
Chapter 1. Environmental Issues at the Territorial Level	3
Etienne COSSART	
1.1. Introduction	3
1.2. Consideration of local context effects in environmental changes	5
1.2.1. Principles of downscaling	6
1.2.2. Statistical method to detect local particularities	7
1.2.3. Enriching regional or even global models at the local level.	9
1.3. Environmental changes in territorial units.	11
1.3.1. MAUP: Modifiable Area Unit Problem.	12
1.3.2. Integrating environmental data into territorial grids	13
1.4. Conclusion	18
1.5. References.	19
Chapter 2. Temporalities of Environmental Changes	21
Etienne COSSART	
2.1. Introduction	21
2.2. Causalities leading to the emergence of temporal signals	23
2.2.1. Causalities and feedback	23
2.2.2. Emergence and self-organization	24

2.3. Modeling and deciphering temporal signals.	25
2.3.1. Qualitative modeling of temporal signals.	26
2.3.2. Stock-and-flow modeling.	27
2.3.3. Cellular automata.	31
2.4. Conclusion	36
2.5. References.	36
Chapter 3. Simulating Future Environmental Changes and Their Impacts	39
Matthieu VIGNAL	
3.1. Introduction.	39
3.2. Anticipating changes in environmental systems	40
3.2.1. Simulating evolution scenarios	41
3.2.2. Approach to constructing evolution scenarios	43
3.3. Selecting themes for evolution scenarios	43
3.3.1. Principles	44
3.3.2. Application example.	47
3.4. Developing evolution scenarios	49
3.4.1. Principles	50
3.4.2. Application example.	51
3.5. Implementing scenarios and validating simulations.	54
3.5.1. Principles	54
3.5.2. Example: deforestation simulation	59
3.6. Feedback on the use of scenarios	62
3.6.1. Challenges in achieving exhaustiveness: intention versus feasibility	63
3.6.2. Multiple scenarios: involvement for decision support.	64
3.6.3. Towards a necessary co-construction	65
3.7. Conclusion	67
3.8. References.	68
Chapter 4. Representations of the Flows Generated by Urban Lifestyle	73
Natacha GONDRAN	
4.1. Introduction.	73
4.2. Representing flows: material and energy flow analyses	78
4.3. Territorial life cycle assessments	84

4.4. Footprints	87
4.5. Conclusion	90
4.6. References.	90
Part 2. Integration of Stakeholder Dynamics	97
Chapter 5. Interactions Among Stakeholders Regarding Environmental Issues	99
Muriel MAILLEFERT and Anne RIVIÈRE-HONEGGER	
5.1. Introduction	99
5.2. Stakeholder analysis framework	103
5.2.1. Grid foundation: a collective action approach	103
5.2.2. Context and historical background of the territory	104
5.2.3. Guidelines for stakeholder analysis	110
5.2.4. Coordination analysis	114
5.3. Application to the Dunkirk territory	116
5.3.1. Typology of stakeholders in the Dunkirk territory	117
5.3.2. Stakeholder interactions in the Dunkirk territory	118
5.4. Conclusion	121
5.5. References.	122
Chapter 6. Integration of Participatory Science into Modeling Approaches	129
Marc BOURGEOIS, Yohan SAHRAOUI, Julie CODINA and Pierre-Olivier MAZAGOL	
6.1. Introduction	129
6.2. Participatory science in environmental geography	132
6.3 . . . and particularly in landscape ecology	133
6.4. Modeling ecological networks	135
6.4.1. The A45 highway project.	137
6.4.2. Assessing the impact of development scenarios in the Bordeaux metropolitan area	139
6.4.3. Modeling the ecological networks of the Saint-Étienne metropolis	143
6.5. Summary and discussion.	148
6.6. References.	150

Part 3. Modeling Complex Environmental Systems	157
Chapter 7. Modeling Anthropogenic Erosive Systems	159
Brian CHAIZE, Aurélien CHRISTOL, Étienne COSSART, Mathieu FRESSARD and Jessica PIC	
7.1. Introduction	159
7.2. Erosion in anthropogenic watersheds: context	160
7.2.1. Landscape structures and erosion: a complex system	160
7.2.2. Landscape structure	163
7.2.3. Landscape and structural connectivity	165
7.3. Landscape structure and sediment production	166
7.3.1. A spatially explicit model: RUSLE	167
7.3.2. Example of spatio-temporal application	168
7.4. Landscape structure and sediment transfer	172
7.4.1. Modeling structural connectivity	172
7.4.2. Example of application in a highly anthropized watershed	174
7.5. Conclusion	178
7.6. References	179
Chapter 8. Modeling Landscape Connectivity and Ecological Networks	185
Marc BOURGEOIS	
8.1. Introduction	185
8.1.1. From landscape ecology to ecological networks	185
8.2. Measuring and spatializing connectivity to identify ecological networks	194
8.2.1. Selection of target species	194
8.2.2. Construction of the land cover map	196
8.2.3. Construction of cost maps	202
8.2.4. Modeling ecological networks	203
8.3. Concrete examples of ecological network modeling	206
8.3.1. The natural urban fabric of the City of Strasbourg: how to model the reconnection of the city's parks using the squirrel and the noctules	206
8.3.2. Integration of regional connectivity in pond restoration: a combined modeling/expert opinion approach	208
8.3.3. Restoration of ecological connectivity: methodological proposal for optimized wildlife crossing locations	210

8.4. Conclusion	211
8.5. References.	212
