<b>Preface</b> . . . . .	xiii
<b>Acronyms and Abbreviations</b> . . . . .	xxiii
<b>Introduction</b> . . . . .	xxxi
<b>Chapter 1. Radioactive Danger</b> . . . . .	1
1.1. Introduction . . . . .	1
1.2. Radionuclides and radioelements. . . . .	4
1.3. Radionuclide-related dangers. . . . .	5
1.4. Elements of nuclear physics . . . . .	6
1.4.1. Nuclear structure . . . . .	7
1.4.2. Electrons. . . . .	9
1.4.3. Stability of the atomic nucleus and nuclear reactions . . . . .	10
1.4.4. Various types of ionizing radiation . . . . .	12
1.4.5. Radiation properties . . . . .	21
1.5. References . . . . .	22
<b>Chapter 2. Radioactive Contamination of the Anthroposphere</b> . . . . .	25
2.1. Introduction . . . . .	25
2.2. Sources of radioactive contamination of the anthroposphere . . . . .	26
2.3. Natural radioactive contamination of the anthroposphere . . . . .	28
2.3.1. Natural contamination of physical environments . . . . .	29
2.3.2. Natural food contamination . . . . .	31
2.3.3. Natural contamination of seafood . . . . .	31
2.3.4. Natural contamination of buildings . . . . .	32

---

2.4. Anthropogenic radioactive contamination . . . . .	33
2.4.1. Anthropogenic radioactive contamination of the physical environment . . . . .	33
2.4.2. Anthropogenic radioactive contamination of seafood products . . . . .	35
2.4.3. Anthropogenic radioactive contamination of other foods . . . . .	36
2.4.4. Radioactive contamination of polluted sites . . . . .	36
2.5. Conclusions . . . . .	39
2.6. References . . . . .	40
<b>Chapter 3. Human Exposure to Radionuclides . . . . .</b>	<b>43</b>
3.1. Introduction . . . . .	43
3.2. Types of exposure to ionizing radiation . . . . .	43
3.2.1. The distinction between irradiation and contamination . . . . .	43
3.2.2. Multiple exposure pathways . . . . .	45
3.3. External exposure pathways . . . . .	45
3.3.1. External exposure from natural sources. . . . .	46
3.3.2. External exposure of artificial origin . . . . .	47
3.4. Internal exposure pathways . . . . .	49
3.4.1. Radionuclide penetration routes (contamination) . . . . .	49
3.4.2. Internal exposures of natural origin . . . . .	50
3.4.3. Internal exposure of artificial origin. . . . .	50
3.5. Conclusions . . . . .	50
3.6. References . . . . .	51
<b>Chapter 4. Radioactive Contamination of Food and Trophic Transfer . . . . .</b>	<b>53</b>
4.1. Introduction . . . . .	53
4.2. Transfer of radionuclides from food to humans. . . . .	53
4.2.1. Human digestion . . . . .	54
4.2.2. Distribution of radionuclides in foodstuffs . . . . .	55
4.2.3. Bioaccessibility . . . . .	55
4.2.4. Bioavailability. . . . .	56
4.2.5. Absorption factors during ingestion . . . . .	57
4.3. Transfers from the environment to animal products consumed by humans. . . . .	57
4.3.1. Food transfer coefficients . . . . .	57
4.3.2. The influence of product processing . . . . .	60
4.4. Transfers from the environment to plant products consumed by humans. . . . .	61
4.5. Transfer from drinking water to humans. . . . .	63
4.6. Environmental monitoring of products consumed by humans . . . . .	64
4.7. References . . . . .	66

---

<b>Chapter 5. Human Bioaccumulation of Radionuclides</b> . . . . .	71
5.1. Human bioaccumulation of radionuclides . . . . .	71
5.1.1. Transmembrane passage . . . . .	71
5.1.2. Epithelial and cerebral barriers . . . . .	73
5.1.3. Body distribution . . . . .	74
5.1.4. Molecular mechanisms . . . . .	76
5.1.5. Bioaccumulation of natural radionuclides . . . . .	76
5.1.6. Bioaccumulation of artificial radionuclides. . . . .	78
5.2. Protecting people from radionuclides . . . . .	85
5.2.1. The search for chemical “radioprotectors” . . . . .	85
5.2.2. The use of potassium iodide tablets in the event of a nuclear accident . . . . .	86
5.2.3. Short and extended containment. . . . .	87
5.2.4. Radiation protection is all about prevention . . . . .	87
5.3. Therapeutic removal of radionuclides from humans . . . . .	87
5.4. Conclusions . . . . .	89
5.5. References . . . . .	90
<b>Chapter 6. Estimates of Human Radiation Doses.</b> . . . . .	97
6.1. Introduction: from exposure to dose . . . . .	97
6.2. Expressing exposure. . . . .	98
6.2.1. Absorbed dose. . . . .	98
6.2.2. Equivalent dose . . . . .	98
6.2.3. Effective dose . . . . .	100
6.2.4. Committed dose due to internal contamination. . . . .	101
6.3. Limits to the estimation of effective doses . . . . .	105
6.3.1. Modeling. . . . .	105
6.3.2. Microdistribution . . . . .	106
6.3.3. Transmutation. . . . .	106
6.3.4. Interactions between radiotoxicity and chemical toxicity . . . . .	106
6.3.5. Individual variability . . . . .	107
6.4. Dose rates. . . . .	107
6.5. Occupational doses . . . . .	107
6.6. Collective doses . . . . .	108
6.7. References . . . . .	109
<b>Chapter 7. Estimating Human Radiation Doses</b> . . . . .	111
7.1. Natural external radiation doses . . . . .	111
7.1.1. Telluric exposure . . . . .	111
7.1.2. Cosmic exposure . . . . .	113

---

7.2. Natural internal radiation doses . . . . .	114
7.2.1. Population exposure to radon . . . . .	114
7.2.2. Internal exposure to natural radionuclides . . . . .	119
7.2.3. Radon exposure of workers . . . . .	121
7.3. Estimates of artificial radiation doses to humans . . . . .	121
7.3.1. External and internal medical exposures . . . . .	122
7.3.2. Exposure due to atmospheric nuclear blasts . . . . .	123
7.3.3. Artificial exposure through food and drink . . . . .	123
7.3.4. Exposure to seafood products . . . . .	124
7.3.5. Occupational exposure . . . . .	125
7.4. Some cases of human exposure . . . . .	126
7.4.1. Guinea pigs . . . . .	126
7.4.2. Estimates of exposure around nuclear facilities . . . . .	128
7.4.3. Estimates of exposure due to fallout from Chernobyl and Fukushima . . . . .	128
7.5. References . . . . .	129
<b>Chapter 8. The Biological Effects of Ionizing Radiation at the Molecular and Cellular Level . . . . .</b>	<b>133</b>
8.1. Physico-chemical processes responsible for biological effects . . . . .	133
8.1.1. Physical interactions of ionizing radiation with living matter . . . . .	134
8.1.2. Physico-chemical reactions . . . . .	134
8.2. The effects of ionizing radiation at the molecular level . . . . .	135
8.2.1. The effects of ionizing radiation on DNA . . . . .	136
8.2.2. Epigenetics . . . . .	140
8.3. The effects of ionizing radiation at the sub-cellular level . . . . .	143
8.3.1. The main cell organelles . . . . .	143
8.3.2. The organization of DNA into nucleotides or chromosomes . . . . .	143
8.3.3. The effects of ionizing radiation on genomic instability and mutations . . . . .	143
8.3.4. The appearance of mutations . . . . .	144
8.4. The consequences of irradiation at cellular level . . . . .	147
8.4.1. Cell structure . . . . .	147
8.4.2. The cell cycle . . . . .	147
8.4.3. Cell division . . . . .	147
8.4.4. Targeted effects of ionizing radiation . . . . .	149
8.4.5. Non-targeted effects of ionizing radiation . . . . .	149

---

8.5. Quantifying the effects of ionizing radiation using biomarkers . . . . .	153
8.5.1. Biomarkers specific to the effects of ionizing radiation. . . . .	153
8.5.2. Biomarkers specific to thyroid cancer. . . . .	156
8.6. Conclusions . . . . .	157
8.7. References . . . . .	159
<b>Chapter 9. Health Effects of Ionizing Radiation at the Individual Level . . . . .</b>	<b>167</b>
9.1. Introduction . . . . .	167
9.1.1. Historical study of Hiroshima and Nagasaki survivors . . . . .	167
9.1.2. Assessment of doses received by survivors of bombs dropped on Japan . . . . .	168
9.2. The adverse effects of ionizing radiation depend on the age at exposure . . . . .	170
9.2.1. Adverse effects of ionizing radiation on the embryo and fetus. . . . .	170
9.2.2. The harmful effects of ionizing radiation on children . . . . .	175
9.3. Radiation-induced cancers in adults . . . . .	184
9.3.1. The effects of high doses, acute radiation syndrome. . . . .	185
9.3.2. The survivors of Hiroshima and Nagasaki . . . . .	186
9.3.3. Radiation-induced cancers as a function of gender . . . . .	189
9.3.4. Effects on red bone marrow . . . . .	192
9.4. Adverse effects of ionizing radiation on different tissues and organs. . . . .	193
9.4.1. Effects on the circulatory system . . . . .	195
9.4.2. Effects on the digestive system . . . . .	196
9.4.3. Effects on the reproductive system . . . . .	197
9.4.4. Effects on the lens . . . . .	199
9.4.5. Effects on the integumentary system . . . . .	203
9.4.6. Effects on the central nervous system. . . . .	204
9.4.7. Effects on the respiratory system . . . . .	204
9.5. The transgenerational effects of ionizing radiation . . . . .	205
9.5.1. Hereditary transmission of genetic information . . . . .	205
9.5.2. Findings on hereditary effects . . . . .	206
9.6. Individual variability in the adverse effects of ionizing radiation . . . . .	207
9.7. Conclusions . . . . .	208
9.7.1. Effects of irradiation in utero and in early childhood . . . . .	208
9.7.2. Effects of radiation on children . . . . .	209
9.7.3. Effects of irradiation at puberty . . . . .	210

---

9.7.4. Effects of irradiation in adulthood. . . . .	210
9.7.5. Transgenerational effects. . . . .	211
9.8. References . . . . .	212
<b>Chapter 10. Occupational Diseases Caused by Ionizing Radiation . . . . .</b>	<b>221</b>
10.1. History of the first radiation injuries caused by X-rays and radium . . . . .	221
10.1.1. The first X-ray-induced cancers . . . . .	222
10.1.2. A major survey of radiation-induced cancers carried out in 1914 . . . . .	222
10.1.3. The first radium-226-induced cancers . . . . .	223
10.2. The creation and difficult development of the occupational disease recognition system . . . . .	224
10.2.1. The long beginnings of the law recognizing occupational diseases in France. . . . .	225
10.2.2. Contemporary knowledge of toxic substances and their deleterious effects . . . . .	226
10.2.3. Implementation of the law on the recognition of occupational diseases in France. . . . .	226
10.2.4. Treatment of radiation-induced diseases . . . . .	227
10.3. Radiation-induced occupational diseases recognized in France since 1948 . . . . .	228
10.3.1. The first statistical data on recognized radiation-induced occupational diseases . . . . .	228
10.3.2. Detailed data on recognized radiation-induced occupational diseases . . . . .	229
10.3.3. Comparison of the risk of radiation-induced cancers with the risk of all occupational cancers in France. . . . .	231
10.4. Diseases recognized in Europe . . . . .	232
10.5. Conclusions. . . . .	233
10.6. References . . . . .	234
<b>Chapter 11. The Dose–Response Relationship to the Effects of Ionizing Radiation . . . . .</b>	<b>239</b>
11.1. Introduction: the dose–response relationship . . . . .	239
11.2. Dose–response relationships for high doses . . . . .	239
11.2.1. Survivor studies . . . . .	240
11.2.2. Other studies . . . . .	241
11.3. Dose–response relationships for low doses . . . . .	242
11.3.1. Epidemiological studies. . . . .	242
11.3.2. Controversies over responses to low doses . . . . .	256

---

11.4. Conclusions . . . . .	265
11.5. References . . . . .	266
<b>Chapter 12. International and French Regulatory Values . . . . .</b>	<b>277</b>
12.1. Introduction . . . . .	277
12.2. International expertise and organization . . . . .	277
12.3. International and European recommendations and their evolution . . . . .	280
12.4. Radiation protection standards and regulatory limits . . . . .	281
12.4.1. Some examples of international radiation protection standards . . . . .	281
12.4.2. European directives and transfer into French law. . . . .	282
12.4.3. Changes in radiation protection standards over time . . . . .	283
12.5. Radionuclide toxicity and radiotoxicity . . . . .	283
12.6. Food standards . . . . .	284
12.7. References . . . . .	286
<b>Chapter 13. General Conclusions and Perspectives . . . . .</b>	<b>289</b>
13.1. Introduction . . . . .	289
13.2. Knowledge of the effects of ionizing radiation on humans . . . . .	290
13.2.1. Assured knowledge of the effects of ionizing radiation on humans . . . . .	290
13.2.2. Imperfect knowledge of the effects of ionizing radiation on humans . . . . .	293
13.2.3. Towards a better understanding of the effects of ionizing radiation on humans . . . . .	297
13.3. Strengths and weaknesses of the radioactive risk assessment method . . . . .	302
13.3.1. Shortcomings in identifying radioactive hazards . . . . .	302
13.3.2. Shortcomings in quantifying radioactive contamination of the anthroposphere. . . . .	302
13.3.3. Shortcomings in the identification of exposure pathways. . . . .	303
13.3.4. Shortcomings in estimating exposure doses. . . . .	303
13.3.5. Gaps in the assessment of adverse effects at various biological levels. . . . .	303
13.3.6. Shortcomings of the dose versus adverse effect relationship . . . . .	303
13.3.7. Shortcomings in the choice of no-adverse-effect values . . . . .	304

13.3.8. Shortcomings in the organization of official standards setting . . . . .	304
13.3.9. Shortcomings in radioactive risk assessment . . . . .	304
13.4. Towards a new approach to estimating radioactive risk . . . . .	305
13.4.1. Limitations of the ICRP approach . . . . .	305
13.4.2. Questionable parameters . . . . .	307
13.4.3. The evolution of the ICRP's concept of radiation protection . . . . .	308
13.4.4. A new approach to radiation protection . . . . .	309
13.5. Conclusions . . . . .	310
13.6. References . . . . .	310
<b>Glossary</b> . . . . .	317
<b>Index</b> . . . . .	319
