List of Notations	xi
Introduction	xiii
Chapter 1. The Displacement Group as a Lie Group	1
1.1. General points	1
1.2. The groups $O(\mathbb{E})$ and $SO(\mathbb{E})$ as Lie groups	3
1.2.1. Preliminary remarks	3
1.2.2. Elementary calculus in $O(\mathbb{E})$ and $SO(\mathbb{E})$ seen as manifolds	7
1.2.3. Exponential mapping of $SO(\mathbb{E})$	12
1.3. The group \mathbb{U} of normalized quaternions	16
1.3.1. Quaternionic representation of $SO(\mathbb{E})$	18
1.3.2. Complement	21
1.3.3. Angular velocity in quaternionic representation	24
1.4. Cayley transforms	25
1.4.1. Cayley transform defined on $\mathcal{L}_a(\mathbb{E})$	25
1.4.2. Cayley transform defined on \mathbb{E}	26
1.4.3. Relation between Cayley transform and quaternions	28
1.4.4. Angular velocity of a motion described with a Cayley representation	29
1.5. The displacement group as a Lie group	30
1.5.1. The displacement group as a matrix group	30
1.5.2. The displacement group as a group of affine maps	44
1.5.3. Classification of the Euclidean displacements	47
1.5.4. The Lie algebra of \mathbb{D} as a Lie algebra of vector fields on \mathcal{E}	49
1.5.5. The Klein form on \mathcal{D}	60
1.5.6. Operator ϵ	62

1.5.7. One-parameter subgroups of \mathbb{D} and exponential mapping	66
1.6. Conclusion	71
1.7. Appendix 1: The algebra of quaternions	73
1.7.1. First definition of quaternions	73
1.7.2. Center of \mathbb{H}	74
1.7.3. Conjugation in \mathbb{H}	74
1.7.4. Euclidean structure of \mathbb{H}	74
1.7.5. Second definition of quaternions	76
1.8. Appendix 2: Lie subalgebras and ideals of \mathfrak{D}	77
1.8.1. Lie subgroups of \mathbb{D}	79
1.8.2. Trivial Lie subgroups	81
1.8.3. One-parameter subgroups	81
1.8.4. Two-parameter subgroups	82
1.8.5. Three-parameter subgroups	82
1.8.6. Four-parameter subgroups	82
1.8.7. Five-parameter subgroups	83
Chapter 2. Dual Numbers and “Dual Vectors” in Kinematics	85
2.1. The Euclidean module \mathfrak{D} over the dual number ring	86
2.1.1. The ring Δ and the module structure on \mathfrak{D}	86
2.1.2. Linear independence over Δ	88
2.1.3. Δ -linear maps	89
2.1.4. Dual inner and mixed products	90
2.2. Dualization of a real vector space	97
2.2.1. General extension of a real vector space into a Δ -module	97
2.2.2. Dualization of the Euclidean vector space in dimension 3	99
2.2.3. The groups $O(\mathfrak{D})$ and $SO(\mathfrak{D})$	101
2.2.4. Generalized Olinde Rodrigues formula	106
2.3. Dual quaternions	110
2.3.1. Geometrical definition	110
2.3.2. Norm and invertibility in \mathcal{H}	111
2.3.3. Dual quaternions and representation of \mathbb{D} in \mathfrak{D}	112
2.4. Differential calculus in Δ -modules	113
2.4.1. Δ -differentiable maps	113
2.4.2. Extensions of ordinary differentiable maps into Δ -differentiable maps	114
Chapter 3. The “Transference Principle”	119
3.1. On the meaning of a general algebraic transference principle	119
3.2. Isomorphism between the adjoint group \mathbb{D}_* and $SO(\widehat{\mathbb{E}})$	120
3.3. Regular maps	121
3.4. Extensions of the regular maps from U to $SO(\mathbb{E})$	123

Chapter 4. Kinematics of a Rigid Body and Rigid Body Systems	129
4.1. Introduction	129
4.2. Kinematics of a rigid body	131
4.3. The position space of a rigid body	131
4.4. Relations to the models of bodies	134
4.4.1. Example 1	134
4.4.2. Example 2	135
4.4.3. Fundamental theorem of kinematics of a rigid body	135
4.5. Changes of frame in kinematics	137
4.6. Graphs and systems subjected to constraints	139
4.6.1. A few elements of graph theory	139
4.6.2. The position space of a rigid body system	141
4.6.3. The various kinds of links between pairs of bodies	143
4.6.4. Kinematics of a linked pair of bodies	146
4.7. Kinematics of chains	148
Chapter 5. Kinematics of Open Chains, Singularities	153
5.1. The mathematical picture of an open chain	153
5.1.1. Articular coordinates	155
5.1.2. The shape function in articular coordinates	156
5.1.3. Further developments about the shape function	159
5.2. Singularities of a kinematic chain	164
5.2.1. General setting	164
5.2.2. A method to calculate the rank of a subset of \mathcal{D}	166
5.3. Examples: Singularities of open kinematic chains with parallel axes	167
5.3.1. Singularities of an open chain HHHH with parallel axes	168
5.3.2. Singularities of an open chain HPHP with parallel axes	175
5.3.3. Singularities of an open chain HPPH with parallel axes	183
5.3.4. Singularities of an open chain HHPP with parallel axes	186
5.3.5. Singularities of open chains HHH with parallel axes	188
5.3.6. Singularities of a chain HPH with parallel axes	190
5.4. Calculations of the successive derivatives of f	191
5.5. Transversality and singularities of a product of exponential mappings	194
5.5.1. Structure of manifold of E_r	195
5.5.2. Tangent space of E_r	197
5.5.3. Transversality	197
5.5.4. The tangent space of $\Sigma_r(f)$ at a weak singular point	201
5.5.5. The global features and the imperfections in the joints: case $n = \dim \mathcal{D}$	202

Chapter 6. Closed Kinematic Chains: Mechanisms	
Theory	207
6.1. Geometric framework and regular case	210
6.2. Exhaustive classification of the local singularities of mechanisms	215
6.2.1. Weak singular configuration	215
6.2.2. Strong singular configuration	216
6.3. Singular mechanisms with degree of mobility one	221
6.3.1. The principle of the method	223
6.3.2. The Bennett mechanism	224
6.3.3. The Bricard mechanism	228
6.4. Concrete examples and calculations	230
6.4.1. The Bricard mechanism	231
6.4.2. The four-bar planar mechanism	232
Chapter 7. Dynamics	235
7.1. Changes of frame in dynamics, objective magnitudes	236
7.2. The inertial mass of a rigid body	240
7.2.1. Center of inertia	242
7.2.2. Bilinear form associated with the kinetic energy	243
7.2.3. Matrix representation of \mathcal{H}_s	251
7.2.4. Kinetic and dynamic momentum	251
7.3. The fundamental law of dynamics	254
7.3.1. Mathematical pictures of forces	255
7.3.2. Statement of the fundamental law in Galilean frames	256
7.3.3. Energy integral	258
7.3.4. Law of dynamics with respect to a non-Galilean frame	260
Chapter 8. Dynamics of Rigid Body Systems	269
8.1. Systems subjected to constraints	269
8.1.1. The position space of a rigid body system	270
8.1.2. The various kinds of links between pairs of bodies	271
8.1.3. Forces exerted in links	277
8.2. The principles of dynamics for multibody systems	279
8.2.1. Newton-Euler form of the principles	279
8.2.2. Virtual power form of the principle	283
8.2.3. Virtual velocities in a system with a linkage	286
8.3. Tree-structured systems	287
8.3.1. Kinematics of a tree-structured system	288

8.3.2. Remarks	291
8.3.3. Virtual power of deformations in a system with a linkage	292
8.3.4. Application of the principle of virtual works to a tree structured system	294
8.4. Complement: Lagrange's form of the virtual power of the inertial forces	298
8.5. Appendix: The subspaces $\mathfrak{n}(s)$ and $\mathfrak{m}(s)$ associated with the Lie subalgebras of \mathfrak{D}	301
8.5.1. Dimension 1 Lie subalgebras and Lie subgroups	302
8.5.2. Dimension 2 Lie subalgebras and Lie subgroups	302
8.5.3. Dimension 3 Lie subalgebras and Lie subgroups	303
8.5.4. Dimension 4 Lie subalgebras and Lie subgroups	303
Bibliography	305
Index	313
