Foreword	ix
Chapter 1. Framework and Challenges	1
1.1. The strong growth of mineral resources and energy consumption	1
1.2. Mineral resources and energy in the context of energy transition	7
1.3. Towards a shortage of mineral resources?	9
Chapter 2. General Information on Mineral Raw Materials and Metals	11
2.1. Relocation of primary production and dependence of industrialized countries on imports	11
2.2. Uncertainty and vulnerability of supply	16
2.3. Recycling of waste	19
2.3.1. Primary production waste	19
2.3.2. End-of-life products	21
Chapter 3. Energy Requirements of the Mining and Metallurgical Industries	27
3.1. Modeling of metal production energy	31
3.1.1. Primary production	31
3.1.2. Energy from recycling	44
3.2. Conclusion	49

Chapter 4. Raw Materials for Energy	53
4.1. Overview of needs by major areas of application in the energy sector	53
4.1.1. Hydrocarbons, coal and catalysis	54
4.1.2. Nuclear	56
4.1.3. Production of electricity from renewable energies	56
4.1.4. Electricity transmission and grids	57
4.1.5. Electricity storage	62
4.1.6. Energy efficiency	64
4.2. The special cases of “high-tech” metals and co-products	66
 Chapter 5. Average Material Intensity for Various Modes of Electricity Production	 69
5.1. Innovation leads to new needs	77
 Chapter 6. Dynamic Modeling	 81
6.1. Raw material and energy requirements for three global energy scenarios	83
6.1.1. Description of the energy-raw materials model	84
6.1.2. Calculated raw material and energy requirements for future electricity-generation infrastructure	91
6.1.3. Comparison of raw material requirements with global consumption and production trends	98
6.1.4. Conclusion	101
6.2. Dynamic model of the evolution of primary production-reserve-prices of mineral raw materials	106
6.2.1. Resources, reserves and requirements.	106
6.2.2. Modeling the supply and primary reserves of fossil fuel resources	109
6.2.3. Modified prey–predator model	117
6.2.4. Model constraints, initial conditions and historical data modeling	118
6.2.5. Long-term future trends	120

6.2.6. Discussion and further extension of the prey–predator model.	125
6.2.7. Incorporation of recycling in dynamic models	128
Conclusion	135
Bibliography	141
Index	155
