Chapter 1. Solution of Differential Equations Systems that Arise During the Analysis of Complex Multicomponent Environments	1
Vsevolod BOHAIENKO, Oleg MARCHENKO and Tetiana SAMOILENKO	
1.1. Construction of an approximate solution of the axisymmetric parabolic problem.	1
1.2. The analysis of numerical modeling of soil mass dynamics in the presence of unsteady pressure filtration	14
1.3. The analysis of numerical simulation of non-isothermal processes in soil.	26
1.4. The study of soil massif state in the foundations of hydraulic structures.	34
1.5. Parallel algorithm for AMLI preconditioner and its application to model soil massif state.	46
1.6. References	68
Chapter 2. Computer Simulation of Transdermal Drug Delivery Using Soluble Microneedles	71
D.A. KLYUSHIN, Serhij LYASHKO, V.V. ONOTSKYI and O.S. BONDAR	
2.1. Introduction	71
2.2. Mathematical model.	72
2.3. Mathematical methods	78
2.4. Numerical experiments	80
2.5. Results and discussion.	81
2.6. Conclusion	91
2.7. References	91

Chapter 3. Homogenization and Modeling of Processes in Composites Similar to Photonic Crystals	95
Gennadiy V. SANDRAKOV	
3.1. Introduction	95
3.2. Composite media with periodic structures and contrast properties	98
3.3. Regular homogenized asymptotic expansions of solutions.	100
3.4. Singular homogenized asymptotic expansions of solutions	107
3.5. Computational aspects of modeling by homogenization	117
3.6. Spectral aspects of modeling by homogenization.	119
3.7. Conclusion	129
3.8. References	129
Chapter 4. Polynomial Operator Interpolation and its Applications	133
V.L. MAKAROV and O.F. KASHPUR	
4.1. Introduction	133
4.2. Formulation of Lagrange’s operator interpolation problem	135
4.3. Solution of the Lagrange’s operator interpolation problem	136
4.4. Solution operator equations by the interpolation method.	139
4.5. Interpolation in Euclidean spaces	143
4.6. Construction of surfaces.	146
4.6.1. Example	146
4.6.2. Example	147
4.6.3. Example	150
4.7. Conclusion	151
4.8. References	151
Chapter 5. New Fractional Differential Analogues of the Biparabolic Evolution Equation and Some Boundary Value Problems.	155
V.M. BULAVATSKY and Serhiy LYASHKO	
5.1. Introduction	155
5.2. Some boundary value problems for the fractional–differential analogue of the biparabolic equation with non-locality in time and space	159
5.3. Generalization of the model equation based on Hilfer-type fractional derivatives	169
5.4. Fractional–differential analogue of the biparabolic evolution equation with Caputo and Caputo–Fabrizio derivatives.	173
5.5. Conclusions	178
5.6. References	178

Chapter 6. Optimal Control for Integro-differential Systems of Hyperbolic Type	181
A.V. ANIKUSHYN, Kh.M. HRANISHAK, V.S. LYASHKO and O.S. BONDAR	
6.1. Introduction	181
6.2. Main notations and spaces	189
6.3. Generalized control problem	191
6.4. A priori inequalities for the differential part of the operator	197
6.5. A priori inequalities for the integro-differential operator.	205
6.6. Example of an optimal control problem	212
6.7. Conclusion	219
6.8. References	219
Chapter 7. Self-adaptive Operator Extrapolation Method for Operator Inclusions in Banach Space	223
Vladimir SEMENOV and Serhii DENYSOV	
7.1. Introduction	223
7.2. Preliminaries	227
7.3. Algorithm.	231
7.4. Convergence	233
7.5. Variants.	239
7.6. Application to variational inequalities	241
7.7. Conclusion	243
7.8. Acknowledgments	243
7.9. References	243
Chapter 8. Forecasting Algorithms Based on Intellectual Analysis of Polynomial Extrapolation and Divided Differences.	247
Yurii TURBAL, Mariana TURBAL and Andrii BOMBA	
8.1. Introduction – Problem of the time series forecasting	247
8.2. Method of finding the predictive value based on a polynomial of any degree without finding the coefficients of the polynomial	249
8.3. The optimal polynomial extrapolation problem.	254
8.4. Condition of forecast efficiency based on the arithmetic mean of polynomial forecasts	260
8.5. Improved algorithm for optimal polynomial forecasting.	262
8.6. Numerical results of the polynomial forecast	266
8.7. Pyramidal method of extrapolation.	271
8.8. Numerical results for the pyramidal methods	283
8.9. Conclusions	285
8.10. References	286

Chapter 9. Transformer with BPE Tokenization for Analysis of Interactions of Chemical Substances and Proteins	289
M. ZOZIUK, P. KRYSENKO, S. DOVGIY, V. MAKAROV, Y. YAKIMENKO and Dmitri KOROLIUK	
9.1. Introduction	290
9.2. Methods and data	291
9.3. The model's architecture	293
9.4. The model's training.	295
9.5. Conclusion	298
9.6. References	298
