Chapter 1. Membrane Bioreactors	1
1.1. Introduction	1
1.2. MBR configurations.	2
1.3. Types of membranes.	5
1.4. Description of general configurations of MBRs	8
1.4.1. Immersed membranes	8
1.4.2. MBR with external loop	14
1.5. MBR dimensioning parameters.	19
1.5.1. Mechanical pretreatments	19
1.5.2. Buffer tank.	20
1.5.3. Other factors to be taken into account.	21
1.6. Tank–membrane association	22
1.6.1. Parameters linked to the biological tank	22
1.6.2. Parameters related to the membrane.	33
1.6.3. Management of membrane filtration	41
1.7. Membrane clogging	43
1.7.1. Parameters influencing membrane clogging	44
1.8. Membrane cleaning	47
1.8.1. Chemical cleaning	48
1.8.2. Implementation of cleaning	50
1.9. Performances and warranties	51
1.9.1. Physico-chemical and microbiological guarantees.	52
1.9.2. Removal of endocrine disruptors (EDs).	54
1.9.3. Hydraulic guarantees	55
1.9.4. Membrane warranties.	55

1.10. Example of dimensioning of MBR with external loop	57
1.10.1. Characteristics of supply water	57
1.10.2. Pretreatment required for the MBR	58
1.10.3. Characteristics required for the treated water	60
1.11. Conclusion	61
1.12. References	62
Chapter 2. Hybrid Systems	71
2.1. Introduction	71
2.2. MBBR	74
2.2.1. Treatment system	79
2.2.2. Materials	83
2.2.3. Dimensioning	88
2.2.4. Operating parameters	93
2.2.5. Implementation	98
2.2.6. Advantages of MBBRs	108
2.2.7. Disadvantages of MBBRs	110
2.3. IFAS	111
2.3.1. Operating principle	111
2.3.2. Materials	113
2.3.3. Implementation and operation	114
2.3.4. IFAS operating parameters	115
2.3.5. IFAS advantages and disadvantages	117
2.3.6. MBBR versus IFAS	118
2.4. Hybrid plant system: Organica FBR™	120
2.4.1. Operating principle	120
2.4.2. Performances	123
2.4.3. Invasive risks of plants	127
2.5. References	131
Chapter 3. Trickling Filters and Biofilters	137
3.1. General information on biofilms	137
3.2. Trickling filters	142
3.2.1. Role of the external support surface for bacteria fixation	143
3.2.2. Ecology of trickling filters	144
3.2.3. Creation of trickling filters	144
3.2.4. Classification of trickling filters	158
3.2.5. Implementation of recirculation	163
3.2.6. Using trickling filters	165

3.2.7. Calculations of trickling filters	168
3.2.8. Performances	173
3.2.9. Advantages and drawbacks	174
3.3. Biofilters	174
3.3.1. Principle	176
3.3.2. Implementation and choice of material	179
3.3.3. Biofiltration alternatives: operation in immersed fixed filters and fixed trickle filters	184
3.3.4. Dimensioning of biofiltration	189
3.3.5. Biofiltration performances	195
3.3.6. Biofilter fields of use	199
3.3.7. The place of biofilters in the wastewater plants	200
3.3.8. Arguments related to biofilters	205
3.3.9. Performances of biofilters	207
3.3.10. Biofilter processes	208
3.4. Conclusion	257
3.5. References	258
Chapter 4. Rotatory Biological Contactors	263
4.1. General information and rotatory biological contactor ecology	263
4.2. Implementation of RBCs and wastewater quality	264
4.3. Dimensioning of RBC facilities	267
4.3.1. Applied surface load	267
4.3.2. Geometry of RBCs	270
4.3.3. Hydraulic loading rates	271
4.3.4. Residence time	271
4.3.5. Liquid–solid separation	271
4.3.6. Sludge production	272
4.3.7. Sludge retention time	273
4.3.8. Energy consumption	273
4.3.9. Removal of organic substances	273
4.3.10. Nitrogen treatment	274
4.4. Factors influencing the RBC process	278
4.4.1. Choice of the liquid–solid separation technique	278
4.4.2. System hydraulics	278
4.4.3. Influence of DO	278
4.4.4. Rotational velocity	279
4.4.5. Influence of temperature	281
4.4.6. Influence of pH	281
4.4.7. Influence of fats (oil and grease)	281
4.4.8. Land use	281

4.5. Advantages and drawbacks of the system	282
4.5.1. Advantages	282
4.5.2. Drawbacks.	282
4.6. RBC processes	283
4.6.1. Various suppliers	283
4.6.2. Focus on the Ecodisk® process (Veolia)	283
4.7. References	285
Index.	289
