Chapter 1. Sustainable Cities and Domestic Wastewater Treatment: The Case of Africa	1
Esoh ELAMÉ	
1.1. Setting the context	1
1.2. Theoretical framework: the sustainable city in Africa	4
1.3. Methodological framework	9
1.4. Prospects for changes to be implemented	9
1.4.1. For a consensual and African definition of the city	10
1.4.2. Making the sustainable city a specific priority objective of urban planning in African cities	15
1.4.3. Sustainable African cities and Black African civilization	19
1.4.4. Making the sustainable city the symbol of the permanent fight against informal urban planning	20
1.4.5. Making the sustainable city a territory that now calls for the criminal responsibility of local officials and elected representatives	23
1.4.6. For a manifesto of African sustainable cities.	24
1.4.7. Making the national urban policy (NUP) a tool for sustainable cities and the right to drinking water and decent sanitation	25
1.4.8. Making the national sanitation strategy a top priority in the process of building a sustainable city	26
1.4.9. The place of liquid sanitation in sustainable urban planning	27
1.4.10. Adopting a sustainable city approach to encourage the realization of liquid sanitation utilities	30

1.5. Conclusion	31
1.6. References	31
Chapter 2. The National Sanitation Policy in Tunisia: Successes and Limitations	33
Rebei HEDI	
2.1. Introduction.	33
2.2. Urban liquid sanitation: Tunisia is ahead of the countries in the region.	34
2.2.1. Early interest in urban sanitation	35
2.2.2. Evolution of sanitation indicators	36
2.2.3. Liquid sanitation in Tunisia: reasons for success	38
2.3. Wastewater treatment plants, a new polluter?.	42
2.3.1. Aspects	42
2.3.2. Consequences	47
2.3.3. Case study	49
2.4. The necessary readjustments.	53
2.4.1. ONAS's strategy	54
2.4.2. Is a specialization of wastewater treatment plants possible?.	55
2.4.3. Should the sewerage option be reviewed?	55
2.4.4. Opting for the circular economy?	56
2.5. Conclusion	58
2.6. References	59
Chapter 3. Cameroon's National Liquid Sanitation Strategy: Critical Analysis and Proposals	63
Esoh ELAMÉ	
3.1. Background.	63
3.2. Methodology	66
3.3. Theoretical framework	67
3.3.1. Strategic planning	67
3.3.2. Wastewater	69
3.4. Results.	70
3.4.1. Existence of a national liquid sanitation strategy in Cameroon that is not based on a national urban policy	70
3.4.2. Existence of a national liquid sanitation strategy in Cameroon that is not based on a national sanitation policy	72
3.4.3. Cameroon's national liquid sanitation strategy was the result of a mixed participatory process	74
3.4.4. Cameroon's liquid sanitation strategic planning process undermines national sovereignty.	75

3.4.5. Cameroon’s national liquid sanitation strategy lacks a “strategic vision”	75
3.4.6. The time horizon of Cameroon’s national sanitation strategy does not make it a strategy	76
3.4.7. The specific objectives of Cameroon’s national liquid sanitation strategy do not take collective sanitation into account.	78
3.4.8. Improved sanitation facilities: not an appropriate long-term solution.	81
3.4.9. Hygiene and sanitation promotion plans: an inappropriate solution.	81
3.4.10. Cameroon’s national liquid sanitation strategy proposes technical solutions that are contrary to urban planning standards insofar as they encourage anarchic urbanization and urban sprawl	83
3.4.11. The strategy’s short-term action plan includes four outcomes that cannot be achieved in two years	85
3.4.12. The strategy’s medium-term action plan includes four outcomes that are difficult to achieve in five years	87
3.5. Conclusion	88
3.6. References	89

Chapter 4. State of Play of Non-Collective Sanitation in Cameroon and Compliance Solutions for Sustainable Urban Planning. 93

Esoh ELAMÉ and Jacques MARTEL

4.1. Introduction.	93
4.2. Methodology	94
4.3. Results.	95
4.3.1. Collective sanitation is totally absent in Cameroon	95
4.3.2. Cameroonian cities are dominated by autonomous sanitation of the informal type	97
4.3.3. Latrines are the most diffuse essential component of liquid sanitation in Cameroon	99
4.3.4. The distance between the latrines and the water points does not comply with WHO requirements: there is a risk of water table contamination.	103
4.3.5. Proposing specific provisions on the depth of septic tanks and water wells	107
4.3.6. Reviewing the current legal framework for NCSs and clarifying the roles and missions of the different actors	108
4.3.7. The practice of zoning for liquid sanitation in Cameroonian cities is completely unknown.	108

4.3.8. The role and missions of decentralized local authorities in liquid sanitation in Cameroon make them key actors in liquid sanitation in cities	110
4.3.9. Lack of a public sanitation service in Cameroonian cities	111
4.3.10. Cameroonian cities do not have a public sewage service.	112
4.3.11. In the Cameroonian context, there is a lack of sizing and construction rules for the different types of NCS facilities	114
4.3.12. The treatment of septage is a major problem in Cameroonian cities that must be addressed	123
4.3.13. Enforcing the polluter pays principle by municipalities for liquid waste	132
4.4. Discussion	133
4.5. Conclusion	134
4.6. References	135
Chapter 5. Industrial Water Management in Sarh (Chad): Spatialization of Socio-Environmental Risks	139
Yamingué BÉTINBAYE, Ngaressesem Goltob MBAYE and Michel TCHOTSOUA	
5.1. Introduction.	139
5.2. Methods	140
5.2.1. Spatialization, socio-environmental risk and urban service	140
5.2.2. A dialectical approach to examining the management of industrial water in Sarh	142
5.3. Results.	145
5.3.1. An economy centered on four industrial units	145
5.3.2. A health facility on the scale of industrial units	146
5.3.3. Water management in industrial units in Sarh	147
5.3.4. Water management at the Sarh regional hospital	151
5.3.5. Industrial water management model and socio-environmental risks.	154
5.4. Discussion	156
5.5. Conclusion	157
5.6. References	158
Chapter 6. Summary Diagnosis of the Excreta and Domestic Wastewater Collection System in the District of Douala III (Cameroon)	161
Èsoh ELAMÉ, Moni Augustine NATHALIE, Tefounou Marco BIANNY and Jacques MARTEL	
6.1. Introduction.	161
6.2. Contextual framework of the study.	162
6.3. Data collection	163

6.4. Results and discussions	165
6.4.1. The human capital of the Douala III district municipality does not allow for decent sanitation for the population.	165
6.4.2. The incoherence of the urban fabric makes it difficult for people to access liquid sanitation	167
6.4.3. The spatial organization of the habitat does not promote decent sanitation in the district municipality of Douala III	169
6.4.4. Lack of modern technical solutions to treat domestic wastewater produced by households	171
6.4.5. Traditional latrines are the most commonly used domestic wastewater collection device in Douala III.	173
6.4.6. The lack of a sanitation network in the Douala III district leads to the dumping of gray water in channels and streams	178
6.4.7. Lack of a municipal waste disposal service in the Douala III district	180
6.4.8. The construction of sanitation facilities in the district of Douala III is achieved without expertise	181
6.4.9. Industrial wastewater, as is the case with domestic wastewater, is not treated in the Douala III district	183
6.4.10. The commune of Douala III does not have a rainwater collection system	186
6.4.11. The sanitation facilities in Douala III produce significant environmental and health impacts	190
6.5. Conclusion	192
6.6. References	194

Chapter 7. The Public Sewerage System in the District Municipality of Douala I: Status of the Issue and Some Technical Guidelines	197
Arnaud Akini DAMSOU, Esoh ELAMÉ and Jacques MARTEL	

7.1. Introduction.	197
7.2. Theoretical framework: the concept of a sanitation network	199
7.2.1. Definition of the sewerage system	199
7.2.2. The components of a sewerage system	200
7.2.3. Brief history of the sewerage system	201
7.3. Results.	203
7.3.1. The legislative and regulatory texts that have existed in Cameroon to date have taken into account the concept of a public sewerage system in a mixed manner	203
7.3.2. To date, there is no public sewerage system in the city of Douala, and even less so in the district of Douala I.	204

7.3.3. Liquid sanitation in the commune of Douala I is essentially autonomous	206
7.3.4. The municipality of Douala I has a fairly structured urban fabric that allows for the design of a public sewer system.	208
7.3.5. The district municipality of Douala I includes functional neighborhoods likely to facilitate the establishment of a sanitation network.	212
7.3.6. The geomorphology of the Douala I district municipality facilitates the installation of a public sewerage system.	216
7.3.7. Physical characteristics of the water table in the Douala I district	218
7.3.8. There is little land available to accommodate public sewerage works in the Douala I district municipality.	220
7.4. Conclusion	221
7.5. References	222
Conclusion	225
