Foreword	xiii
Acknowledgments	xv
Introduction	xvii
Part 1. General Information and Approach	1
Chapter 1. The Explosion Phenomenon	3
1.1. Explosion of an ATEX	4
1.1.1. Definition of an ATEX	4
1.1.2. Case of an ATEX consisting of a combustible dust dispersed in air	23
1.1.3. Case of a hybrid ATEX	25
1.1.4. Evaluation of the released energy E_{lib}	25
1.2. Chemical systems other than ATEX	39
1.2.1. Definition elements	39
1.2.2. Evaluation of E_{lib}	40
1.2.3. Flame propagation regimes in explosive system 1 or 2	40
1.3. Hollow body rupture (or bursting)	44
1.3.1. Definition elements	44
1.3.2. Evaluation of E_{lib}	45
1.4. Superheated liquid vaporization	46
1.4.1. Definition elements	46
1.4.2. Evaluation of E_{lib}	46
1.5. Comparison of E_{lib} with the energy E_{eff} required to produce the explosion effects	47

Chapter 2. Method of Investigating an Explosion	49
2.1. Introduction	49
2.2. Establishment of the explosion mechanism	49
2.3. Search for answers to the questions of HOW MUCH and WHAT	50
2.4. Identification of the different types of damage produced by an explosion	51
2.4.1. Effects on structures	52
2.4.2. Effects on the human body	54
2.5. Estimation of the energy required to produce the mechanical effects	55
2.5.1. E_{eff} estimation tools	56
2.5.2. Comparison between E_{eff} and E_{lib}	64
2.5.3. Order of magnitude of the yield ρ for each type of explosive system	65
2.6. Hypothesis on the type of explosion involved	66
2.7. Estimation of the quantity of the explosive system involved	66
2.7.1. General case	66
2.7.2. Specific case of an ATEX explosion occurring in a confined environment	67
2.8. Evaluation of the hypothesis on the type of explosion involved	67
2.8.1. Compatibility of the hypothesis with the circumstances of the explosion	67
2.8.2. Cases of explosions which may a priori involve different systems	68
2.9. Search for answers to the question of HOW?	71
2.10. Representation of the mechanism of explosion by tree of events	71
Part 2. 27 Case Studies of Domestic or Industrial Explosions	73
Introduction to Part 2	75
P2.1. Domestic explosions	78
P2.1.1. Determination of ATEX location and volume	79
P2.1.2. Thermal effects of an explosion on buildings and the human body	82
P2.1.3. Mechanical effects of an explosion in a housing	83
Case 1. Discrimination Between NG and Butane	87
C1.1. Different arguments tentatively used for discrimination	87
C1.2. Thermal effects of the flame	87
C1.3. Mechanical effects of the explosion	88
C1.4. Relevant arguments used for the elimination of a butane leak	88
C1.5. Identified mechanism	89
Case 2. Determination of the Mechanism of an Accident Involving a Fire and an Explosion	91
C2.1. Circumstances and effects of the explosion	91
C2.2. Occurrence of a fire prior to the explosion	91

Case 3. Determination of the Mechanism of an Accident Involving a Fire and Two Explosions	93
C3.1. Nature of the flammable gases or liquids involved in the first explosion . . .	93
C3.2. Determination of the explosion mechanism	94
Case 4. Determination of the Mechanism of an Explosion from the Leak Flow Rate of NG.	97
Case 5. Determination of the Mechanism of a Propane Explosion from the Leak Flow Rate.	101
Case 6. Determination of the Explosion Mechanism, Based on the Location of the Ignition Source of ATEX	103
C6.1. Circumstances of the explosion.	103
C6.2. Discrimination between the boiler leak and the cooker oven leak	104
Lessons learned from the investigation of domestic explosions	106
Case 7. Explosion of a Hydrogenated ATEX in a Pulp Paper Tank	109
C7.1. Description of facilities, circumstances and effects of the explosion	109
C7.2. Objectives of the investigation	110
C7.3. Determination of the composition of the ATEX	110
C7.3.1. Experimental determination of the ATEX components	110
C7.3.2. Determination of the ATEX conditions, formation and ignition	112
C7.3.3. Consistency between the explosion effects and the estimated ATEX volume	112
C7.4. Conclusion	113
Lessons learned from the investigation of the explosion of a hydrogenated ATEX	113
Case 8. Explosion of a Hydrogenated ATEX in an Electrolyzer Cell.	115
C8.1. Description of facilities and explosion circumstances	115
C8.2. Effects of the explosion	115
C8.3. Investigation objectives	115
C8.3.1. Formation and location of an ATEX in the electrolyzer.	116
C8.3.2. Results of experimental study	116
C8.3.3. Consistency between the mechanical effects and the overpressure.	116
Lessons learned from Cases 7 and 8	117
Case 9. Explosion of an Air–Propane ATEX	119
C9.1. Case presentation	119
C9.1.1. Description of the facilities.	119
C9.1.2. Circumstances of the explosion	120

C9.1.3. Explosion damage.	120
C9.1.4. Establishment of the explosion mechanism.	121
Lessons learned from the investigation	125
Case 10. Explosion in a Refinery	127
C10.1. Case presentation.	127
C10.1.1. Description of facilities and circumstances of explosion.	127
C10.1.2. Flame propagation regime	128
C10.1.3. Effects of explosion	128
Lessons from the investigation	130
Case 11. Explosions in Recovery Facilities for Cupola Gases	131
C11.1. Case presentation.	131
C11.1.1. Description of the facilities	131
C11.1.2. Circumstances of the explosion	132
C11.1.3. Explosion damage	132
C11.1.4. Determination of the explosion mechanism.	133
C11.1.5. Flammability of the CGs involved in the explosion	133
Lessons learned from investigation of explosion in cupola facilities.	145
Case 12. Explosion of Acetone Vapor	147
C12.1. Case presentation.	147
C12.1.1. Description of the facilities	147
C12.1.2. Circumstances of the explosion	148
C12.1.3. Description of explosion damage	148
C12.1.4. Mechanism of the explosion	149
Lessons from investigation of an explosion of acetone vapor	154
Case 13. Explosion of Vapor of Toluene	155
C13.1. Case presentation.	155
C13.1.1. Description of the facility and of the circumstances of the explosion.	155
C13.1.2. Effects of the explosion	155
C13.1.3. Determination of the mechanism of the explosion	156
Lessons learned from the investigation of an explosion of toluene vapor	158
Case 14. Explosion of Vapor of Kerosene	159
C14.1. Case presentation.	159
C14.1.1. Description of the facility.	159
C14.1.2. Circumstances of the explosion	159
C14.1.3. Description of explosion damage	160
C14.1.4. Determination of the explosion mechanism.	160

Lessons from the investigation of an explosion of kerosene vapor in contact with a hot surface	166
Case 15. Explosion of Volatile Hydrocarbons	167
C15.1. Case presentation	167
C15.1.1. Description of the facility and the circumstances of the explosion . . .	167
C15.1.2. Description of explosion damage	167
C15.1.3. Mechanism of explosion	168
C15.1.4. Estimation of energy released by explosion.	173
Lessons to be learned from the investigation of explosion of volatile hydrocarbons	175
Case 16. Explosion in a Spray Dryer of Powdered Milk	177
C16.1. Case presentation	177
C16.1.1. Description of the facility.	177
C16.1.2. Circumstances and effects of the explosion	178
C16.1.3. Flammability and explosion characteristics of milk powder.	179
C16.1.4. Mechanism of explosion	181
Lessons learned from the expertise of an explosion in a dryer	182
Case 17. Explosion in a Wood Waste Grinding Facility	185
C17.1. Case presentation.	185
C17.1.1. Description of the facility.	186
C17.1.2. Circumstances of the explosion	187
C17.1.3. Effects of the explosion	187
C17.1.4. Flammability characteristics of the wood dust	188
C17.1.5. Determination of the mechanism of explosion	189
Lessons learned from the investigation	191
Case 18. Explosion of a Chloroduct	193
C18.1. Case presentation.	193
C18.2. Circumstances of the explosion	193
C18.3. Effects of explosion	193
C18.4. Determination of the explosion mechanism	195
C18.4.1. Explosive system identification	195
C18.4.2. Estimation of the rupture pressure P_r of the chloroduct	198
C18.4.3. Different arguments for a detonation of the hydrogen–chlorine mixture	198
Lessons learned from investigation of the explosion of a chloroduct	200

Case 19. Combustion of Steel in Oxygen	201
C19.1. Case presentation	201
C19.1.1. Description of the facility	201
C19.1.2. Circumstances of the accident	203
C19.1.3. Effects	203
C19.1.4. Mechanism of the accident	204
Lessons learned from investigation of combustion in oxygen	206
Case 20. Explosion in an Aluminum Foundry	207
C20.1. Case presentation	207
C20.1.1. Description of the facility	207
C20.1.2. Circumstances of the explosion	208
C20.1.3. Explosion effects	208
C20.1.4. Determination of the mechanism of explosion	211
Lessons from investigation of an explosion in an aluminum foundry	215
Case 21. Explosion in a Laboratory Nitration Test	217
C21.1. Case presentation	217
C21.1.1. Nature of the explosive system	217
C21.1.2. Experimental validation of the conditions of the runaway reaction	218
C21.1.3. Results	218
C21.1.4. Conclusion of the tests	221
Lessons learned from investigation of a burst vessel	221
Case 22. Explosion in a Chemical Reactor	223
C22.1. Case presentation	223
C22.1.1. Description of the chemical synthesis process	223
C22.1.2. Circumstances of the explosion	224
C22.1.3. Effects of the explosion	224
C22.1.4. Determination of the explosion mechanism	225
C22.1.5. Description of the explosion process	227
Lessons learned from the investigation	228
Case 23. Explosion and Fire Resulting from an Oxidation by KMnO_4	229
C23.1. Case presentation	229
C23.1.1. Circumstances of the explosion	229
C23.1.2. Effects of the explosion	230
C23.1.3. Fire resulting from an ignition of formaldehyde by KMnO_4	233
Lessons learned from the investigation	233

Case 24. Explosion Involving Hydrazine	235
C24.1. Case presentation	235
C24.1.1. Description of the experimental conditions	236
C24.1.2. Results	237
C24.1.3. Origin of an overpressure in a UHH tank	241
Lessons learned from the investigation	241
Case 25. Burst of a Steel Gas Cylinder	243
C25.1. Case presentation	243
C25.1.1. Circumstances of the burst	243
C25.1.2. Effects of the burst	243
C25.1.3. Determination of the mechanism of the burst	247
C25.1.4. Conclusions of the investigation	259
Lessons learned from the investigation	260
Case 26. Explosion in a Foundry of Steel Waste	263
C26.1. Case presentation	263
C26.1.1. Description of the facility	263
C26.1.2. Circumstances of the explosion	263
C26.1.3. Effects of explosion	263
C26.1.4. Estimation of E_{eff} based on damage analysis	264
C26.1.5. Determination of the explosion mechanism	265
C26.1.6. Yield of the explosion	265
Lessons learned from the investigation	266
Case 27. Explosion in the Boiler of a Household Waste Incinerator	267
C27.1. Case presentation	267
C27.1.1. Facility description	267
C27.1.2. Circumstances of the explosion	268
C27.1.3. Description of damage	268
C27.1.4. Determination of the explosion mechanism	269
C27.1.5. Protection of the boiler against the effects of an explosion	273
Lessons learned from investigation	275
Conclusion	277
