Introduction	xi
Julie FEN-CHONG	
 Part 1. Spatial Practices as Indicators of Centralities and Hierarchies.	1
 Chapter 1. Urban Hierarchies and Centralities Through the Prism of Tweets and Telephone Calls	3
Julie FEN-CHONG	
1.1. Introduction.	3
1.2. Tweets and mobile telephony: new sources of data to describe the organization of urban space.	4
1.2.1. The generalization of geolocated data	4
1.2.2. Imperfect or incomplete geographic locations	6
1.2.3. Validity of tweet and telephone call data	11
1.3. Using tweet and mobile-telephone data to describe the organization of urban space	13
1.3.1. Daytime densities	13
1.3.2. Centralities	16
1.3.3. Intra- and inter-urban hierarchies.	20
1.4. Conclusion	22
1.5. References	23

Chapter 2. Measuring Ephemeral Centralities in Territories and Networks	29
Françoise LUCCHINI	
2.1. Introduction.	29
2.2. The challenges opened up by geolocated personal data	31
2.3. The methodological issue of spatiotemporal divisions	37
2.4. Establishing the variability of mobilities and concentrations: complementarity of surface and reticular spatiotemporal approaches	39
2.5. Integrating the evolutions in post-GDPR geolocated data formats	45
2.6. Conclusion	48
2.7. References	49
 Part 2. Networks as Creators of Centralities and Hierarchies.	53
 Chapter 3. Structures of Today's World: Geographical Imaginaries of the Press	55
Robin LAMARCHE PERRIN, Romain LECONTE and Étienne TOUREILLE	
3.1. Introduction.	55
3.2. Centers and peripheries of media coverage of the world	56
3.2.1. Information flow	56
3.2.2. Territorial representation.	61
3.3. Methodology for analyzing geopolitical centralities and hierarchies in the French press	65
3.3.1. Data	65
3.3.2. Centralities and hierarchies studied	68
3.4. The media presence of the countries of the world in the French press.	70
3.4.1. Indicators to measure a country's media presence.	70
3.4.2. A world unevenly represented in the French press	72
3.5. The media representation of the world in the French press: network centralities and hierarchies	79
3.5.1. Indicators to measure the media co-presence of a pair of countries	79
3.5.2. Centers and regions of media representation of the world	81
3.5.3. Measurement indicators of countries' media dependence	84
3.5.4. Hierarchical structure of the media representation of the world	85
3.5.5. Media independence, dynamic in the co-presence network	89

3.6. Conclusion: a hierarchical and polycentric world	92
3.7. Acknowledgments	94
3.8. References	94

Chapter 4. Geography of Research Activities and Urban Hierarchies 97

Marion MAISONOBE

4.1. Introduction	97
4.2. The spatial logics of research activity distribution	98
4.2.1. Research: a metropolitan activity?	98
4.2.2. Research institutions: manifold spatialization logics	101
4.2.3. Innovation capacities and population density	105
4.3. The spatial distribution of research activities in France and the United Kingdom	108
4.3.1. Case studies, data and methods	108
4.3.2. Urban and scientific hierarchies in France and the United Kingdom: an analysis of disciplinary differences	110
4.4. Conclusion	115
4.5. References	117

Chapter 5. Hierarchy and Centrality in Ecological Networks 123

Yohan SAHRAOUI, Céline CLAUZEL and Jean-Christophe FOLTÊTE

5.1. Introduction	123
5.2. Ecological networks in landscape ecology	124
5.2.1. The heterogeneity of landscape structures	124
5.2.2. Scales and hierarchy of ecological processes	124
5.2.3. Movements of individuals and landscape connectivity	125
5.2.4. Spatial and temporal scales of ecological networks	126
5.2.5. Landscape fragmentation	128
5.3. Spatial properties of ecological networks: centrality and hierarchy	128
5.3.1. Modeling ecological networks	128
5.3.2. Hierarchy in ecological networks	131
5.3.3. Measuring centrality	134
5.4. Applications in land use planning and biodiversity conservation	136
5.5. Conclusion	138
5.6. References	139

Part 3. Hierarchies and Centralities in Territorial Systems. 143**Chapter 6. Hierarchy and Centralities in Facilities and Services. 145**

Mohamed HILAL and Virginie PIGUET

6.1. Introduction.	145
6.2. Centralities: what are we talking about?	146
6.2.1. The concept of centrality in geography and urban economics. . .	146
6.2.2. Administrative, political or historical centrality	147
6.2.3. Some common operational definitions	149
6.3. Data and methods for measuring centralities	152
6.3.1. Presence of facilities and services	152
6.3.2. Choice of the municipality as the reference spatial unit	153
6.3.3. Mixed automatic classification	154
6.3.4. Delimitation of service areas	155
6.4. France's 10,774 centers of facilities and services	156
6.4.1. Four levels of hierarchical centers	158
6.4.2. Levels of facility centers.	159
6.4.3. Link between center levels, population and jobs.	161
6.5. Service and facility centers in their territorial context.	162
6.5.1. Overlapping service areas	162
6.5.2. Centers at the core of city attraction areas and intercommunalities	165
6.5.3. Center vulnerabilities.	169
6.6. Conclusion: what lessons for public action?	172
6.7. References	173

Chapter 7. Processes that Create Centralities and Hierarchies in Human Geography. 177

Cécile TANNIER

7.1. Three principles and five laws underlying the concentrations and dispersions observed in human geography	178
7.2. Integration of the spatial container and social content of places, and strong emergence between individual behaviors and collective references	182
7.3. Centralities and hierarchies in settlement systems	190
7.3.1. A multi-scale framework for analyzing the variables determining the concentration and dispersion of human settlements within a settlement system	191

7.3.2. Processes behind the evolution of centralities and hierarchy in settlement systems.	198
7.4. Conclusion	210
7.5. References	211
 Chapter 8. Hierarchies and Processes of Co-evolution in Urban Systems	 217
Juste RAIMBAULT	
8.1. Introduction.	217
8.1.1. Complexity and hierarchy	217
8.1.2. Territorial systems and hierarchy.	219
8.1.3. Co-evolution and hierarchy	220
8.1.4. Proposed approach	220
8.2. Co-evolution model	221
8.2.1. Context	221
8.2.2. Model description.	222
8.2.3. Implementation of the model	224
8.2.4. Quantification of the hierarchy of urban systems	224
8.3. Simulation results	225
8.3.1. Hierarchy patterns	225
8.3.2. Hierarchy regimes	232
8.4. Discussion	236
8.5. Conclusion	237
8.6. Acknowledgments.	238
8.7. References	238
