|---|-----|
| Preface | vii |
| Introduction | ix |
| Chapter 1. The Primitive Equations | 1 |
| 1.1. Wind forecast equations (conservation of momentum) | 1 |
| 1.1.1. Real forces | 6 |
| 1.1.2. Apparent forces | 14 |
| 1.1.3. Equation of motion | 17 |
| 1.2. Continuity equation (conservation of mass) | 19 |
| 1.3. Temperature forecast equation (conservation of energy) | 21 |
| 1.4. Moisture forecast equation (conservation of water vapor) | 26 |
| 1.5. Synopsis of equations | 26 |
| Chapter 2. Solving Methods in NWP Models | 31 |
| 2.1. Decomposition of variables – the perturbation method | 31 |
| 2.1.1. Synoptic scale equations | 39 |
| 2.1.2. Mesoscale equations | 40 |
| 2.2. Numerical solutions of partial differential equations | 43 |
| 2.2.1. Computations by finite difference schemes | 44 |
| 2.2.2. Derivation of finite difference representations | 46 |
| 2.2.3. Methods for solving the advection–diffusion equation | 50 |
| 2.3. Time splitting | 63 |
| Chapter 3. Domain Structures and Boundary Conditions | 67 |
| 3.1. Horizontal grid structure and resolution | 68 |
| 3.2. The vertical coordinate system | 71 |
| 3.2.1. Terrain-following coordinate system | 72 |

| | |
|--|------------|
| 3.3. Boundary conditions. | 86 |
| 3.3.1. Lateral boundary conditions | 88 |
| 3.3.2. Upper (top) boundary conditions | 90 |
| 3.3.3. Lower (bottom) boundary conditions | 90 |
| 3.4. Design of a simulation. | 99 |
| Chapter 4. Introduction to Data Assimilation | 101 |
| 4.1. Successive correction methods | 102 |
| 4.2. Least square method. | 103 |
| 4.3. Variational approach | 108 |
| 4.4. Generalization of the methods | 114 |
| Chapter 5. Desert Dust Modeling | 119 |
| 5.1. Dust uptake mechanisms formulation | 121 |
| 5.2. Dust advection and deposition | 127 |
| 5.3. Parameterization of the dust feedbacks on climate | 132 |
| Chapter 6. Simulations of Extreme Weather and Dust Events | 143 |
| 6.1. Case study 1: numerical simulation of a Mediterranean cyclone and its sensitivity on lower boundary conditions | 143 |
| 6.1.1. Description of the synoptic conditions | 143 |
| 6.1.2. Design of the simulations | 145 |
| 6.1.3. Analysis of the numerical simulations | 147 |
| 6.2. Case study 2: nowcasting an extreme precipitation event | 151 |
| 6.2.1. Synoptic analysis of the event | 151 |
| 6.2.2. Nowcasting methodology and results | 153 |
| 6.3. Case study 3: seasonal predictability of a large-scale heat wave | 157 |
| 6.3.1. Description of the synoptic conditions | 158 |
| 6.3.2. Model description and methodology | 159 |
| 6.3.3. Predictability assessment. | 161 |
| 6.4. Numerical study of a severe desert dust storm over Crete | 163 |
| Appendices | 169 |
| Appendix 1 | 171 |
| Appendix 2 | 179 |
| References | 197 |
| Index | 207 |
