<b>Foreword</b> . . . . .	xi
Claude JAUPART	
<b>Preface</b> . . . . .	xv
Jean-François LÉNAT	
<b>List of Abbreviations</b> . . . . .	xvii
<b>Chapter 1. Monitoring of Volcanic Fluids</b> . . . . .	1
Séverine MOUNE and Émilie ROULLEAU	
1.1. Introduction. . . . .	1
1.2. Composition, solubility and exsolution of magmatic gases. . . . .	2
1.2.1. Composition . . . . .	2
1.2.2. Solubility and exsolution . . . . .	3
1.3. In situ sampling and analysis techniques for volcanic fluids . . . . .	9
1.3.1. Monitoring of fumarole compositions by Giggenbach ampoules . . . . .	9
1.3.2. Monitoring of the compositions and gas fluxes of the diluted plume . . . . .	10
1.3.3. Representativeness of samples/measurements in fumaroles (undiluted) and plumes: comparison of techniques . . . . .	16

1.3.4. Monitoring of diffuse degassing . . . . .	17
1.3.5. Dissolved gases in hot springs . . . . .	20
1.4. Contribution of melt inclusions to geochemical monitoring . . . . .	25
1.5. Example of monitoring . . . . .	27
1.5.1. Gas monitoring of Poas volcano (Costa Rica): identification of phreatic and phreatomagmatic eruption precursors (based on de Moor et al. (2019)) . . . . .	27
1.6. Recommendations for fluid monitoring . . . . .	29
1.7. References . . . . .	31

## **Chapter 2. Monitoring of Eruptive Products: Deposits**

### **Associated with Pyroclastic Fallout . . . . . 45**

Lucia GURIOLI, Alessandro TADINI, Simon THIVET,  
Étienne MÉDARD, Carole BERTHOD and Ivan VLASTELIC

2.1. Introduction. . . . .	45
2.2. General characteristics of pyroclastic fallout deposits. . . . .	46
2.3. Importance of the scale of analysis (from whole deposit to particles). . . . .	49
2.4. Sampling and syn- and post-eruptive parameters. . . . .	51
2.5. Pyroclastic scale measurements . . . . .	56
2.5.1. Particle size and distribution . . . . .	56
2.5.2. Syn-eruptive methods for determining pyroclast size and pyroclast size distribution . . . . .	57
2.5.3. Post-eruptive methods for determining pyroclast size and pyroclast size distribution . . . . .	61
2.5.4. Particle size parameters . . . . .	66
2.5.5. Identification of pyroclastic components . . . . .	69
2.5.6. Post-eruptive techniques to determine particle morphology . . . . .	76
2.5.7. Terminal fall velocity of the particles . . . . .	82
2.5.8. Pyroclast density and porosity . . . . .	85
2.5.9. Pyroclast permeability . . . . .	89
2.5.10. Vesicle and crystal size distributions. . . . .	91
2.6. Petrographic and geochemical analysis of pyroclastic products . . . . .	95
2.6.1. Petrological observation of pyroclasts. . . . .	95
2.6.2. Pyroclast composition . . . . .	97
2.6.3. Magma temperature . . . . .	99
2.6.4. Crystals in equilibrium: pre-eruptive conditions in magma reservoirs . . . . .	101
2.6.5. Crystals in disequilibrium: diffusion and kinetics of magmatic processes . . . . .	102
2.6.6. Radiogenic isotopes . . . . .	106

2.7. Measurements at the scale of pyroclastic deposits . . . . .	112
2.7.1. Dispersion axis and dispersal area . . . . .	115
2.7.2. Mass load. . . . .	116
2.7.3. Volume . . . . .	118
2.8. Total grain size distribution . . . . .	127
2.8.1. Syn-eruptive methods for determining TGSD . . . . .	128
2.8.2. Post-eruptive methods for determining TGSD . . . . .	129
2.9. Plume heights . . . . .	131
2.9.1. Syn-eruptive methods for determining plume heights . . . . .	133
2.9.2. Post-eruptive methods for determining plume heights . . . . .	133
2.10. Mass discharge rate . . . . .	137
2.10.1. Syn-eruptive methods to determine the MDR . . . . .	137
2.10.2. Post-eruptive methods to determine the MDR . . . . .	137
2.11. Temperature. . . . .	140
2.11.1. Syn-eruptive methods to determine the temperature. . . . .	140
2.11.2. Post-eruptive methods for determining temperature. . . . .	141
2.12. Ballistic parameters . . . . .	143
2.12.1. Syn-eruptive methods for determining ballistic trajectories . . . . .	143
2.12.2. Post-eruptive methods for determining the ballistic landing position map and ballistic flight parameters . . . . .	144
2.13. References. . . . .	148

### **Chapter 3. Monitoring of Eruptive Products: Pyroclastic Density Currents and Their Deposits . . . . .**

Alessandro TADINI, Lucia GURIOLI, Sylvain CHARBONNIER,  
Simon THIVET and Jean-Claude THOURET

3.1. Introduction. . . . .	167
3.2. General characteristics of pyroclastic density currents and their deposits . . . . .	168
3.3. The importance of scale in the joint study of deposition and individual particles. . . . .	173
3.4. Syn-eruptive and post-eruptive measurements . . . . .	174
3.4.1. Particle scale measurements. . . . .	174
3.4.2. Deposit scale measurements. . . . .	177
3.5. Perspectives . . . . .	208
3.6. References . . . . .	209

<b>Chapter 4. Gravity Monitoring of Volcanoes</b> . . . . .	217
Lydie GAILLER, Jean-François LÉNAT and Franck DONNADIEU	
4.1. Introduction. . . . .	217
4.2. Instruments . . . . .	218
4.3. Measurement procedures . . . . .	220
4.3.1. Ground-level gravimetry. . . . .	220
4.3.2. On-board mobile gravimetry . . . . .	222
4.3.3. Space gravimetry . . . . .	222
4.4. External phenomena generating temporal variations of gravity . . . . .	223
4.4.1. Seismic noise and wind . . . . .	223
4.4.2. Atmospheric pressure . . . . .	223
4.4.3. Land and ocean tides . . . . .	223
4.4.4. Hydrological reservoirs . . . . .	224
4.4.5. Altitude variations and deformation . . . . .	224
4.5. Causes of gravimetric variations on volcanoes . . . . .	227
4.5.1. Evolution of hydrothermal systems . . . . .	227
4.5.2. Evolution of magma systems . . . . .	228
4.5.3. Volcano-tectonic phenomena . . . . .	229
4.6. Case studies. . . . .	229
4.6.1. Monitoring and evolution of a magma reservoir at Kilauea . . . . .	229
4.6.2. Follow-up of an intrusion and a collapse at Piton de la Fournaise . . . . .	230
4.7. Study and monitoring by muography. . . . .	234
4.7.1. Overview. . . . .	234
4.7.2. Instruments. . . . .	235
4.7.3. Measurements and data . . . . .	236
4.7.4. Case studies . . . . .	236
4.8. Perspectives . . . . .	238
4.9. Acknowledgment . . . . .	239
4.10. References. . . . .	239
<b>Chapter 5. Electrical and Electromagnetic Monitoring of Volcanoes</b> . . . . .	245
Lydie GAILLER, Jean-François LÉNAT and Philippe LABAZUY	
5.1. Introduction. . . . .	245
5.2. Phenomena at the origin of resistivity and electric or EM field variations . . . . .	246
5.2.1. Reminder on the resistivity of rocks . . . . .	246
5.2.2. Causes of rock resistivity variation in the volcanic domain . . . . .	248

---

5.3. Natural and induced electric and EM fields . . . . .	249
5.4. Monitoring: instruments and procedures. . . . .	249
5.4.1. Direct current monitoring . . . . .	249
5.4.2. EM monitoring . . . . .	253
5.5. Perspectives . . . . .	261
5.6. Acknowledgment . . . . .	262
5.7. References . . . . .	262
<b>Chapter 6. Magnetic Monitoring of Volcanoes . . . . .</b>	<b>265</b>
Lydie GAILLER and Jean-François LÉNAT	
6.1. Introduction. . . . .	265
6.2. Phenomena generating magnetization and magnetic field variations . . . . .	266
6.2.1. Piezomagnetism . . . . .	266
6.2.2. Thermomagnetism . . . . .	268
6.2.3. Electrokinetic effects . . . . .	269
6.2.4. Other mechanisms . . . . .	269
6.3. Monitoring: instruments and procedures. . . . .	269
6.4. Case studies. . . . .	270
6.4.1. Periodic monitoring. . . . .	270
6.4.2. Continuous monitoring. . . . .	274
6.5. Perspectives . . . . .	276
6.6. Acknowledgment . . . . .	277
6.7. References . . . . .	277
<b>List of Authors . . . . .</b>	<b>279</b>
<b>Index . . . . .</b>	<b>281</b>
