Foreword	ix
Preface	xiii
Introduction	xxix
Chapter 1. From “Autonomous” Research to Societal Solutions	1
1.1. Positioning of process engineering	3
1.2. A forced transition.	9
Chapter 2. Highly “Autonomous” Research	21
2.1. Intensification	23
2.1.1. Reminders on microfluidics.	24
2.1.2. Applications	28
2.2. Additive manufacturing	31
2.3. Nanotechnologies	39
Chapter 3. Externally Stimulated Research	43
3.1. Chemistry and process engineering.	45
3.2. Biotechnologies – bioprocess engineering.	46
3.3. Impacts of digital technology	48
3.4. Product engineering	54
3.5. Materials and process engineering	57
3.6. Biomimicry and process engineering.	60
3.6.1. Emergence of biomimetic concepts in PE	63
3.6.2. Applicability of biomimicry	64
3.7. Complexity and process engineering.	64

3.7.1. Between complication and complexity	65
3.7.2. Complexity “quite simply”	66
3.7.3. To start the debate	67
Chapter 4. Research in Response to Societal Questions	73
4.1. General framework	76
4.2. Some additional elements	86
4.2.1. Some additions and considerations	87
4.3. Energies	91
4.3.1. Biomass	96
4.3.2. Electrochemistry, photochemistry	99
4.3.3. Storage of electrical energy	100
4.3.4. Processes related to negative greenhouse gas emissions	104
4.3.5. Energy and raw materials	106
4.3.6. Consequences in terms of a low-carbon industry	106
4.4. Life Cycle Assessment (LCA).	108
4.4.1. Life Cycle Assessment limitations	109
4.4.2. Life Cycle Assessment methodology	109
4.4.3. Environmental mechanism: cause-and-effect chain (Becaert 2010)	111
Chapter 5. Non-Exhaustive List of Possible Actions in Process Engineering	115
5.1. Process engineering under constraints stimulating upstream research	117
5.2. Methodological development and paradigms	125
5.3. Challenges and innovations	126
5.4. Possible science behind the application	128
Chapter 6. Consequences and Attempting to Reach an Operative Conclusion	131
6.1. A provisional assessment	133
6.1.1. Consolidating knowledge	136
6.1.2. Developing a sense of belonging, creativity and innovation.	137
6.2. A possible operational conclusion	140
6.2.1. A little reflection on PE research.	144
Appendix 1. Process Engineering in the French National Strategy and in “Horizon Europe”	151
Appendix 2. Reminders on Artificial Intelligence	181

Appendix 3. Between Process and Environmental Engineering . . .	205
