Foreword 1	ix
Laurent BASEILHAC	
Foreword 2	xi
Vincent LAFLÈCHE	
Foreword 3	xv
June C. WISPELWEY	
Introduction	xvii
Jean-Pierre DAL PONT and Marie DEBACQ	
Chapter 1. Industries, Businesses and People	1
Jean-Pierre DAL PONT	
1.1. Manufacturing, process, and service industries	2
1.1.1. Manufacturing industries	2
1.1.2. Process industries	2
1.1.3. Service industries	3
1.2. Founding fathers of the industrial enterprise	3
1.3. Anatomy of an industrial enterprise	4
1.4. Industrial strategy: the business plan	6
1.4.1. Industrial strategy of the company	7
1.4.2. Business plan	10
1.4.3. Reengineering the corporation	11
1.5. Systemic vision of the enterprise: the enterprise and flows	11
1.6. The two operating modes of the enterprise: operational and entrepreneurial	13
1.7. Governance	14

1.8. Operations abroad	15
1.9. References	15
Chapter 2. Earth, Our Habitat: Products by the Millions, the Need for Awareness	17
Jean-Pierre DAL PONT and Michel ROYER	
2.1. Population explosion	18
2.2. Systemic analysis and the concept of a system	20
2.3. Earth, a complex system	22
2.3.1. Atmospheric chemistry, ozone, and climate change	22
2.3.2. Water-energy-food-climate nexus	22
2.4. Awareness, sustainable development.	26
2.4.1. Rachel Carson and sustainability.	26
2.4.2. Sustainable development	27
2.5. Products by the millions	28
2.6. Resource Earth, garbage Earth: towards a circular economy	31
2.6.1. Circular economy	32
2.6.2. Lifecycle assessment (LCA) and ecodesign	33
2.7. Materials science	34
2.8. Product formulation and engineering.	35
2.9. Product toxicology and ecotoxicology	36
2.10. Product packaging and ergonomics	37
2.10.1. Packaging and packing/wrapping.	37
2.10.2. Ergonomics.	37
2.11. New consumer requirements.	38
2.12. Boxes.	39
2.13. References.	83
Chapter 3. Designing Chemical Products	85
Willi MEIER	
3.1. Introduction.	85
3.1.1. Why is chemical product design important?	85
3.1.2. Current state of the art	87
3.2. Basic technologies.	88
3.2.1. Dimensions	88
3.2.2. Additives	89
3.2.3. Microencapsulation.	94
3.3. Products	97
3.3.1. Aspirin®	97
3.3.2. Coffee and related beverages	99
3.4. Product design 4.0.	103
3.5. References	105

Chapter 4. Chemical Engineering: Introduction and Fundamentals	107
Marie DEBACQ, Alain GAUNAND and Céline HOURIEZ	
4.1. Introduction: definitions, history, and challenges	107
4.1.1. Prehistory of chemical engineering	108
4.1.2. A crosscutting science serving society	109
4.1.3. Chemistry, formulation, industrial chemistry, chemical engineering, and product engineering	110
4.2. Fundamentals of chemical engineering	114
4.2.1. Thermodynamic fundamentals of chemical engineering	114
4.2.2. Kinetic fundamentals of process design	126
4.2.3. System-balances-performance approach for process design	145
4.2.4. Conclusion: ideal hydrodynamics and balances	152
4.3. Box	154
4.4. References	155
Chapter 5. Chemical Engineering: Unit Operations	157
Marie DEBACQ	
5.1. Distillation	159
5.1.1. Vapor–liquid equilibria	162
5.1.2. Balances for a distillation column	164
5.1.3. McCabe–Thiele method	165
5.1.4. Technologies for continuous distillation	167
5.1.5. Conclusion on distillation	168
5.2. Fluid–solid mechanical separations	169
5.2.1. Fluid–solid interaction laws	169
5.2.2. Settling	173
5.2.3. Centrifugal and inertial separation	174
5.2.4. Filtration	177
5.2.5. Conclusion on fluid–solid mechanical separations	182
5.3. Stirring	183
5.3.1. Qualitative aspects of stirring	184
5.3.2. Quantitative aspects of stirring	186
5.3.3. Choice of impellers	188
5.3.4. Stirred tank scale-up	189
5.3.5. Conclusion on stirring	190
5.4. Heat exchangers	190
5.4.1. Heat exchanger technologies	190
5.4.2. Designing heat exchangers	192
5.4.3. Conclusion on heat exchangers	195

5.5. Reactors	195
5.5.1. Conversion rate and generalized extent of reaction	196
5.5.2. Ideal homogeneous reactors.	198
5.5.3. Non-ideal reactors	203
5.5.4. Multi-phase reactors	205
5.6. Conclusion	208
5.7. Boxes	209
5.8. Glossary	223
5.9. References	224
List of Authors	227
Index	229
Summary of Volume 2	231
